|                        |                                                  |
|------------------------|--------------------------------------------------|
| <i>TimeOut</i>         | A timeout occurred during IIOP processing        |
| <i>OpNotAllowed</i>    | not logged in                                    |
| <i>OpNotSupported</i>  | if board does not support this function.         |
| <i>OperationFailed</i> | invalid references are used, duplicate UserTags. |

**Version**

Release 12.0

## 8.66 SI sub table passing

This module contains types, enums and methods related to SI sub table passing.

### Functions

- void [DCM::DeviceControl::CreateOutputSI\\_Tables](#) (in IPS\_RefTS\_t OutTs, in TableGenerationDataList\_t TableGenerationDataList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError)  
*Create a list of OutputSiSubTables on one OutTs.*
- void [DCM::DeviceControl::DeleteOutputSI\\_Tables](#) (in IPS\_RefTS\_t OutTs, in TableKeys\_List\_t - TableRefList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*delete a list of OutputSiSubTable on one OutTs.*

### 8.66.1 Detailed Description

This module contains types, enums and methods related to SI sub table passing.

### 8.66.2 Function Documentation

**8.66.2.1** void [DCM::DeviceControl::CreateOutputSI\\_Tables](#) ( in IPS\_RefTS\_t OutTs, in TableGenerationDataList\_t TableGenerationDataList ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError)

Create a list of OutputSiSubTables on one OutTs.

#### Parameters

|    |                             |                                  |
|----|-----------------------------|----------------------------------|
| in | OutTs                       | specifies BoardNr, PortNr.and TS |
| in | Table-Generation-DataList,: | list of output table settings    |

#### Exceptions

|                |                                                         |
|----------------|---------------------------------------------------------|
| TimeOut        | a timeout occurred during IIOP processing               |
| OpNotSucceeded | internal error only                                     |
| OpNotAllowed   | not logged on                                           |
| OpNotSupported | when call not yet supported on running software version |
| LicenseError   | when the appropriate license is not installed           |

#### Version

release 6.0  
 release 7.1 support for EITpfa to EITpfo conversion

**8.66.2.2** void [DCM::DeviceControl::DeleteOutputSI\\_Tables](#) ( in IPS\_RefTS\_t OutTs, in TableKeys\_List\_t TableRefList ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

delete a list of OutputSiSubTable on one OutTs.

**Parameters**

|    |                       |                                        |
|----|-----------------------|----------------------------------------|
| in | <i>OutTs</i>          | specifies BoardNr, PortNr.and TS       |
| in | <i>TableRefList,:</i> | list of output TableRefs to be deleted |

**Exceptions**

|                       |                                                         |
|-----------------------|---------------------------------------------------------|
| <i>TimeOut</i>        | a timeout occurred during IIOP processing               |
| <i>OpNotSucceeded</i> | internal error only                                     |
| <i>OpNotAllowed</i>   | not logged on                                           |
| <i>OpNotSupported</i> | when call not yet supported on running software version |

**Version**

release 6.0

## 8.67 EAS

This module contains types, enums and methods related to the EAS module.

### Classes

- struct `DCM::DeviceControl::EasConfig_t`  
*Represents the configuration of an EAS proxy.*

### Typedefs

- typedef `sequence< EasConfig_t > DCM::DeviceControl::EasConfigList_t`  
*A sequence of EAS proxy configurations.*

### Enumerations

- enum `DCM::DeviceControl::enumEasProtocol_t` { `DCM::DeviceControl::eEasProtocol_SCTE18`, `DCM::DeviceControl::eEasProtocol_CAP12`, `DCM::DeviceControl::eEasProtocol_Reserved1`, `DCM::DeviceControl::eEasProtocol_Reserved2`, `DCM::DeviceControl::eEasProtocol_Reserved3`, `DCM::DeviceControl::eEasProtocol_Reserved4`, `DCM::DeviceControl::eEasProtocol_Reserved5` }  
*Represents the protocol used by the EAS proxy.*
- enum `DCM::DeviceControl::enumEasSocketType_t` { `DCM::DeviceControl::eEasSocketType_UDP_Unicast`, `DCM::DeviceControl::eEasSocketType_UDP_Multicast`, `DCM::DeviceControl::eEasSocketType_UDP_Broadcast`, `DCM::DeviceControl::eEasSocketType_Reserved1`, `DCM::DeviceControl::eEasSocketType_Reserved2`, `DCM::DeviceControl::eEasSocketType_Reserved3`, `DCM::DeviceControl::eEasSocketType_Reserved4`, `DCM::DeviceControl::eEasSocketType_Reserved5` }  
*Represents the socket type.*

### Functions

- void `DCM::DeviceControl::CreateEas` (out unsigned long EasId) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Create an EAS proxy.*
- void `DCM::DeviceControl::DeleteEas` (in unsigned long EasId) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Delete an EAS proxy.*
- void `DCM::DeviceControl::SetEasConfig` (in EasConfig\_t EasConfig) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set EAS proxy configuration settings for one EAS proxy.*
- void `DCM::DeviceControl::GetEasConfigL` (in IdList EasIds, out EasConfigList\_t EasConfigList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get EAS proxy configuration settings.*

#### 8.67.1 Detailed Description

This module contains types, enums and methods related to the EAS module.

### 8.67.2 Typedef Documentation

#### 8.67.2.1 typedef sequence<EasConfig\_t> DCM::DeviceControl::EasConfigList\_t

A sequence of EAS proxy configurations.

Definition at line 29007 of file DCM.idl.

### 8.67.3 Enumeration Type Documentation

#### 8.67.3.1 enum DCM::DeviceControl::enumEasProtocol\_t

Represents the protocol used by the EAS proxy.

Enumerator:

- eEasProtocol\_SCTE18* protocol = SCTE18 CEAM section.
- eEasProtocol\_CAP12* protocol = CAP1.2 XML (not yet supported).
- eEasProtocol\_Reserved1* for future use
- eEasProtocol\_Reserved2* for future use
- eEasProtocol\_Reserved3* for future use
- eEasProtocol\_Reserved4* for future use
- eEasProtocol\_Reserved5* for future use

Definition at line 28954 of file DCM.idl.

#### 8.67.3.2 enum DCM::DeviceControl::enumEasSocketType\_t

Represents the socket type.

Enumerator:

- eEasSocketType\_UDP\_Unicast* Unicast UDP.
- eEasSocketType\_UDP\_Multicast* Multicast UDP.
- eEasSocketType\_UDP\_Broadcast* Broadcast UDP.
- eEasSocketType\_Reserved1* for future use
- eEasSocketType\_Reserved2* for future use
- eEasSocketType\_Reserved3* for future use
- eEasSocketType\_Reserved4* for future use
- eEasSocketType\_Reserved5* for future use

Definition at line 28968 of file DCM.idl.

### 8.67.4 Function Documentation

#### 8.67.4.1 void DCM::DeviceControl::CreateEas ( out unsigned long *EasId* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Create an EAS proxy.

**Parameters**

|     |              |                                     |
|-----|--------------|-------------------------------------|
| out | <i>EasId</i> | proxy_id of newly created EAS proxy |
|-----|--------------|-------------------------------------|

**Exceptions**

|                       |                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------|
| <i>TimeOut</i>        | a timeout occurred during IIOP processing.                                                                |
| <i>OpNotSucceeded</i> | internal error, such as max. number of proxies reached.                                                   |
| <i>OpNotAllowed</i>   | not logged on.                                                                                            |
| <i>OpNotSupported</i> | when called on other board than the mainboard or when call not yet supported on running software version. |

**Version**

release 8.5

**8.67.4.2** void DCM::DeviceControl::DeleteEas ( in unsigned long *EasId* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Delete an EAS proxy.

En EAS proxy can only be deleted if it is not used by any of the output transport streams.

**Parameters**

|    |              |                                 |
|----|--------------|---------------------------------|
| in | <i>EasId</i> | proxy_id of EAS proxy to delete |
|----|--------------|---------------------------------|

**Exceptions**

|                       |                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------|
| <i>TimeOut</i>        | a timeout occurred during IIOP processing.                                                                |
| <i>OpNotSucceeded</i> | EAS proxy still in use, no EAS proxy found matching the EasId.                                            |
| <i>OpNotAllowed</i>   | not logged on.                                                                                            |
| <i>OpNotSupported</i> | when called on other board than the mainboard or when call not yet supported on running software version. |

**Version**

release 8.5

**8.67.4.3** void DCM::DeviceControl::GetEasConfigL ( in IdList *EasIds*, out EasConfigList\_t *EasConfigList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Get EAS proxy configuration settings.

**Parameters**

|     |                      |                                                                                                                                                                                                            |
|-----|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in  | <i>EasIds</i>        | Identifies which EAS proxies to retrieve. If the provided list is empty, all EAS proxies are retrieved.                                                                                                    |
| out | <i>EasConfigList</i> | List of EAS proxy configurations. This list can be empty if no EAS proxies are created all proxies are requested. If a specific EAS proxy is requested but not found, the function returns OpNotSucceeded. |

**Exceptions**

|                       |                                                         |
|-----------------------|---------------------------------------------------------|
| <i>TimeOut</i>        | a timeout occurred during IIOP processing.              |
| <i>OpNotSucceeded</i> | invalid EasId, no EAS proxy for given (specific) EasId. |
| <i>OpNotAllowed</i>   | not logged on.                                          |
| <i>OpNotSupported</i> | when called on other board than the main board.         |

**Version**

release 8.5

**8.67.4.4** void DCM::DeviceControl::SetEasConfig ( in EasConfig\_t *EasConfig* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Set EAS proxy configuration settings for one EAS proxy.

The EasId field in the EasConfig structure will be used to lookup the EAS proxy.

**Parameters**

|    |                  |                                                       |
|----|------------------|-------------------------------------------------------|
| in | <i>EasConfig</i> | contains the EasId and the settings of the EAS proxy. |
|----|------------------|-------------------------------------------------------|

**Exceptions**

|                       |                                                                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <i>TimeOut</i>        | a timeout occurred during IIOP processing.                                                                                                |
| <i>OpNotSucceeded</i> | invalid parameters, eg. No EAS proxy for given EAS id, duplicate name, invalid IP_Addr, invalid udp port, specified udp port in use, etc. |
| <i>OpNotAllowed</i>   | not logged on.                                                                                                                            |
| <i>OpNotSupported</i> | when called on other board than the mainboard or when call not yet supported on running software version.                                 |

**Version**

release 8.5

## 8.68 ASI-SFN

This contains types, enums and methods to configure SFN specific functionality of an ASI-SFN board.

### Classes

- struct [DCM::DeviceControl::GPS\\_Settings\\_t](#)
- struct [DCM::DeviceControl::MIP\\_Settings\\_t](#)
- struct [DCM::DeviceControl::GPS\\_Status\\_t](#)

### Enumerations

- enum [DCM::DeviceControl::enGPS\\_ClockImpedance](#) { [DCM::DeviceControl::eHighImpedant](#), [DCM::DeviceControl::e50Ohm](#) }
- enum [DCM::DeviceControl::enGPS\\_1PPS\\_SliceLevel](#) { [DCM::DeviceControl::eAutomaticDetection](#), [DCM::DeviceControl::eManualSetting](#) }
- enum [DCM::DeviceControl::enGPS\\_1PPS\\_Edge](#) { [DCM::DeviceControl::eRisingEdge](#), [DCM::DeviceControl::eFallingEdge](#) }
- enum [DCM::DeviceControl::enGPS\\_10MHz\\_Invert](#) { [DCM::DeviceControl::eNotInverted](#), [DCM::DeviceControl::eInverted](#) }
- enum [DCM::DeviceControl::enGPS\\_LED](#) { [DCM::DeviceControl::eLED\\_Off](#), [DCM::DeviceControl::eLED\\_On](#) }
- enum [DCM::DeviceControl::enSFN\\_Mode](#) { [DCM::DeviceControl::eSFN\\_Disable](#), [DCM::DeviceControl::eSFN\\_Enable](#) }
- enum [DCM::DeviceControl::enConstellation](#) { [DCM::DeviceControl::eQPSK](#), [DCM::DeviceControl::e16\\_QAM](#), [DCM::DeviceControl::e64\\_QAM](#) }
- enum [DCM::DeviceControl::enHierarchyAndInterleaving](#) { [DCM::DeviceControl::eNonHierarchical](#), [DCM::DeviceControl::eAlpha1](#), [DCM::DeviceControl::eAlpha2](#), [DCM::DeviceControl::eAlpha4](#) }
- enum [DCM::DeviceControl::enCodeRate](#) { [DCM::DeviceControl::e1\\_Over\\_2](#), [DCM::DeviceControl::e2\\_Over\\_3](#), [DCM::DeviceControl::e3\\_Over\\_4](#), [DCM::DeviceControl::e5\\_Over\\_6](#), [DCM::DeviceControl::e7\\_Over\\_8](#) }
- enum [DCM::DeviceControl::enGuardInterval](#) { [DCM::DeviceControl::e1\\_Over\\_32](#), [DCM::DeviceControl::e1\\_Over\\_16](#), [DCM::DeviceControl::e1\\_Over\\_8](#), [DCM::DeviceControl::e1\\_Over\\_4](#) }
- enum [DCM::DeviceControl::enFFT\\_Mode](#) { [DCM::DeviceControl::e2K\\_Mode](#), [DCM::DeviceControl::e8K\\_Mode](#) }
- enum [DCM::DeviceControl::enChannelBandwidth](#) { [DCM::DeviceControl::e7\\_MHz](#), [DCM::DeviceControl::e8\\_MHz](#), [DCM::DeviceControl::e6\\_MHz](#) }
- enum [DCM::DeviceControl::enTS\\_Priority](#) { [DCM::DeviceControl::eLowPriorityTS](#), [DCM::DeviceControl::eNonHierarchicalOrHighPriorityTS](#) }
- enum [DCM::DeviceControl::enDVB\\_H\\_Timeslicing](#) { [DCM::DeviceControl::eNoTimeSlicing](#), [DCM::DeviceControl::eTimeSlicing](#) }
- enum [DCM::DeviceControl::enDVB\\_H\\_MPE\\_FEC](#) { [DCM::DeviceControl::eMPE\\_FEC\\_NotUsed](#), [DCM::DeviceControl::eMPE\\_FEC\\_Used](#) }

### Functions

- void [DCM::DeviceControl::ASI\\_SFN\\_GetGpsSettings](#) (in unsigned short BoardNr, out [GPS\\_Settings\\_t](#) GpsSettings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the configuration of the GPS ports (10MHz and 1PPS)*
- void [DCM::DeviceControl::ASI\\_SFN\\_SetGpsSettings](#) (in unsigned short BoardNr, in [GPS\\_Settings\\_t](#) GpsSettings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the configuration of the GPS ports (10MHz and 1PPS)*

- void [DCM::DeviceControl::ASI\\_SFN\\_GetGpsStatus](#) (in unsigned short BoardNr, out GPS\_Status\_t GpsStatus) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the status of the GPS ports (10MHz and 1PPS)*

- void [DCM::DeviceControl::ASI\\_SFN\\_GetMipSettings](#) (in IPS\_RefTS\_t RefTsOut, out MIP\_Settings\_t MipSettings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the parameters of a MIP packet.*

- void [DCM::DeviceControl::ASI\\_SFN\\_SetMipSettings](#) (in IPS\_RefTS\_t RefTsOut, in MIP\_Settings\_t MipSettings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the parameters of a MIP packet.*

- void [DCM::DeviceControl::ASI\\_SFN\\_GetSfnMode](#) (in IPS\_RefTS\_t RefTsOut, out enSFN\_Mode eSFN\_Mode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the SFN mode (SFN enabled/disabled)*

- void [DCM::DeviceControl::ASI\\_SFN\\_SetSfnMode](#) (in IPS\_RefTS\_t RefTsOut, in enSFN\_Mode eSFN\_Mode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError)

*Set the SFN mode (Enable/disable SFN)*

### 8.68.1 Detailed Description

This contains types, enums and methods to configure SFN specific functionality of an ASI-SFN board.

### 8.68.2 Enumeration Type Documentation

#### 8.68.2.1 enum DCM::DeviceControl::enChannelBandwidth

Enumerator:

*e7\_MHz*  
*e8\_MHz*  
*e6\_MHz*

Definition at line 29143 of file DCM.idl.

#### 8.68.2.2 enum DCM::DeviceControl::enCodeRate

Enumerator:

*e1\_Over\_2*  
*e2\_Over\_3*  
*e3\_Over\_4*  
*e5\_Over\_6*  
*e7\_Over\_8*

Definition at line 29120 of file DCM.idl.

#### 8.68.2.3 enum DCM::DeviceControl::enConstellation

Enumerator:

*eQPSK*  
*e16\_QAM*

***e64\_QAM***

Definition at line 29105 of file DCM.idl.

**8.68.2.4 enum DCM::DeviceControl::enDVB\_H\_MPE\_FEC**

Enumerator:

***eMPE\_FEC\_NotUsed***

***eMPE\_FEC\_Used*** used by at least one elementary stream

Definition at line 29162 of file DCM.idl.

**8.68.2.5 enum DCM::DeviceControl::enDVB\_H\_Timeslicing**

Enumerator:

***eNoTimeSlicing***

***eTimeSlicing*** used by at least one elementary stream

Definition at line 29156 of file DCM.idl.

**8.68.2.6 enum DCM::DeviceControl::enFFT\_Mode**

Enumerator:

***e2K\_Mode***

***e8K\_Mode***

Definition at line 29137 of file DCM.idl.

**8.68.2.7 enum DCM::DeviceControl::enGPS\_10MHz\_Invert**

Enumerator:

***eNotInverted***

***eInverted***

Definition at line 29075 of file DCM.idl.

**8.68.2.8 enum DCM::DeviceControl::enGPS\_1PPS\_Edge**

Enumerator:

***eRisingEdge***

***eFallingEdge***

Definition at line 29069 of file DCM.idl.

**8.68.2.9 enum DCM::DeviceControl::enGPS\_1PPS\_SliceLevel**

Enumerator:

***eAutomaticDetection***

***eManualSetting***

Definition at line 29063 of file DCM.idl.

**8.68.2.10 enum DCM::DeviceControl::enGPS\_ClockImpedance****Enumerator:**

*eHighImpedant*  
*e500hm*

Definition at line 29057 of file DCM.idl.

**8.68.2.11 enum DCM::DeviceControl::enGPS\_LED****Enumerator:**

*eLED\_Off*  
*eLED\_On*

Definition at line 29081 of file DCM.idl.

**8.68.2.12 enum DCM::DeviceControl::enGuardInterval****Enumerator:**

*e1\_Over\_32*  
*e1\_Over\_16*  
*e1\_Over\_8*  
*e1\_Over\_4*

Definition at line 29129 of file DCM.idl.

**8.68.2.13 enum DCM::DeviceControl::enHierarchyAndInterleaving****Enumerator:**

*eNonHierarchical*  
*eAlpha1*  
*eAlpha2*  
*eAlpha4*

Definition at line 29112 of file DCM.idl.

**8.68.2.14 enum DCM::DeviceControl::enSFN\_Mode****Enumerator:**

*eSFN\_Disable*  
*eSFN\_Enable*

Definition at line 29099 of file DCM.idl.

**8.68.2.15 enum DCM::DeviceControl::enTS\_Priority****Enumerator:**

*eLowPriorityTS*  
*eNonHierarchicalOrHighPriorityTS*

Definition at line 29150 of file DCM.idl.

### 8.68.3 Function Documentation

**8.68.3.1** void DCM::DeviceControl::ASI\_SF\_N\_GetGpsSettings ( in unsigned short *BoardNr*, out GPS\_Settings\_t *GpsSettings* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Get the configuration of the GPS ports (10MHz and 1PPS)

#### Parameters

|     |                    |                                |
|-----|--------------------|--------------------------------|
| in  | <i>BoardNr</i>     | Specifies the BoardNr          |
| out | <i>GpsSettings</i> | Configuration of the GPS ports |

#### Exceptions

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

#### Version

Release 6.9

**8.68.3.2** void DCM::DeviceControl::ASI\_SF\_N\_GetGpsStatus ( in unsigned short *BoardNr*, out GPS\_Status\_t *GpsStatus* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Get the status of the GPS ports (10MHz and 1PPS)

#### Parameters

|     |                  |                                                                         |
|-----|------------------|-------------------------------------------------------------------------|
| in  | <i>BoardNr</i>   | Specifies the BoardNr                                                   |
| out | <i>GpsStatus</i> | Status of 10MHz and 1PPS clock and values of 1PPS Level (min/max/slice) |

#### Remarks

Should only be used for testing purposes. It may influence mechanism to detect GPS status changes!

#### Exceptions

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

#### Version

Release 6.9

**8.68.3.3** void DCM::DeviceControl::ASI\_SF\_N\_GetMipSettings ( in IPS\_RefTS\_t *RefTsOut*, out MIP\_Settings\_t *MipSettings* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Get the parameters of a MIP packet.

**Parameters**

|     |                    |                            |
|-----|--------------------|----------------------------|
| in  | <i>RefTsOut</i>    | The output TS              |
| out | <i>MipSettings</i> | Parameters of a MIP packet |

**Exceptions**

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

**Version**

Release 6.9

**8.68.3.4** void DCM::DeviceControl::ASI\_SFN\_GetSfnMode ( in IPS\_RefTS\_t *RefTsOut*, out enSFN\_Mode *eSFN\_Mode* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Get the SFN mode (SFN enabled/disabled)

**Parameters**

|     |                  |                                 |
|-----|------------------|---------------------------------|
| in  | <i>RefTsOut</i>  | The output TS                   |
| out | <i>eSFN_Mode</i> | SFN mode (SFN enabled/disabled) |

**Exceptions**

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

**Version**

Release 6.9

**8.68.3.5** void DCM::DeviceControl::ASI\_SFN\_SetGpsSettings ( in unsigned short *BoardNr*, in GPS\_Settings\_t *GpsSettings* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Set the configuration of the GPS ports (10MHz and 1PPS)

**Parameters**

|    |                    |                                |
|----|--------------------|--------------------------------|
| in | <i>BoardNr</i>     | Specifies the BoardNr          |
| in | <i>GpsSettings</i> | Configuration of the GPS ports |

**Exceptions**

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

**Version**

Release 6.9

**8.68.3.6** void DCM::DeviceControl::ASI\_SFN\_SetMipSettings ( in IPS\_RefTS\_t *RefTsOut*, in MIP\_Settings\_t *MipSettings* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Set the parameters of a MIP packet.

**Parameters**

|    |                    |                            |
|----|--------------------|----------------------------|
| in | <i>RefTsOut</i>    | The output TS              |
| in | <i>MipSettings</i> | Parameters of a MIP packet |

**Exceptions**

|                       |                                    |
|-----------------------|------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards |
|-----------------------|------------------------------------|

**Version**

Release 6.9

**8.68.3.7** void DCM::DeviceControl::ASI\_SFN\_SetSfnMode ( in IPS\_RefTS\_t *RefTsOut*, in enSfn\_Mode *eSfn\_Mode* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError)

Set the SFN mode (Enable/disable SFN)

**Parameters**

|    |                  |                                 |
|----|------------------|---------------------------------|
| in | <i>RefTsOut</i>  | The output TS                   |
| in | <i>eSfn_Mode</i> | SFN mode (SFN enabled/disabled) |

**Exceptions**

|                       |                                       |
|-----------------------|---------------------------------------|
| <i>OpNotSupported</i> | When called for non-ASI-SFN boards    |
| <i>LicenseError</i>   | When there are insufficient licenses. |

**Version**

Release 6.9

## 8.69 PacketIndexer

This contains types, enums and methods to configure PacketIndexer functionality.

### Classes

- struct [DCM::DeviceControl::PacketIndexerSettings\\_t](#)

### Functions

- void [DCM::DeviceControl::GetPacketIndexerSettings](#) (in IPS\_RefTS\_t RefTsOut, out PacketIndexerSettings\_t PacketIndexerSettings) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the Packet Indexer Settings of an output TS.*
- void [DCM::DeviceControl::SetPacketIndexerSettings](#) (in IPS\_RefTS\_t RefTsOut, in PacketIndexerSettings\_t PacketIndexerSettings) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Set the Packet Indexer Settings of an output TS.*
- void [DCM::DeviceControl::GetPacketIndexerId](#) (in unsigned short BoardNr, out unsigned short - PacketIndexerId) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

*Get the Packet Indexer Id of an ASI board.*

- void [DCM::DeviceControl::SetPacketIndexerId](#) (in unsigned short BoardNr, in unsigned short PacketIndexerId) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

*Set the Packet Indexer Id of an ASI board.*

### 8.69.1 Detailed Description

This contains types, enums and methods to configure PacketIndexer functionality.

### 8.69.2 Function Documentation

- 8.69.2.1** void [DCM::DeviceControl::GetPacketIndexerId](#) ( in unsigned short *BoardNr*, out unsigned short *PacketIndexerId* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the Packet Indexer Id of an ASI board.

#### Parameters

|     |                        |                       |
|-----|------------------------|-----------------------|
| in  | <i>BoardNr</i>         | The asi board number  |
| out | <i>PacketIndexerId</i> | The Packet Indexer Id |

#### Exceptions

|                         |                                                                                    |
|-------------------------|------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i> | <ul style="list-style-type: none"> <li>• When called for non-ASI boards</li> </ul> |
|-------------------------|------------------------------------------------------------------------------------|

|                          |                                                                               |
|--------------------------|-------------------------------------------------------------------------------|
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>   |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When writing to FW failed</li> </ul> |

**Version**

Release 9.0

**8.69.2.2** void DCM::DeviceControl::GetPacketIndexerSettings ( in IPS\_RefTS\_t *RefTsOut*, out PacketIndexerSettings\_t *PacketIndexerSettings* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the Packet Indexer Settings of an output TS.

**Parameters**

|     |                              |                            |
|-----|------------------------------|----------------------------|
| in  | <i>RefTsOut</i>              | The output TS              |
| out | <i>PacketIndexerSettings</i> | settings of Packet Indexer |

**Exceptions**

|                          |                                                                                        |
|--------------------------|----------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>• When called for non-ASI boards</li> </ul>     |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>            |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When invalid references are passed</li> </ul> |

**Version**

Release 9.0

**8.69.2.3** void DCM::DeviceControl::SetPacketIndexerId ( in unsigned short *BoardNr*, in unsigned short *PacketIndexerId* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set the Packet Indexer Id of an ASI board.

**Parameters**

|    |                        |                       |
|----|------------------------|-----------------------|
| in | <i>BoardNr</i>         | The asi board number  |
| in | <i>PacketIndexerId</i> | The Packet Indexer Id |

**Exceptions**

|                          |                                                                                  |
|--------------------------|----------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"><li>• When called for non-ASI boards</li></ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"><li>• When parse errors occur</li></ul>        |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"><li>• When writing to FW failed</li></ul>      |

**Version**

Release 9.0

**8.69.2.4** void DCM::DeviceControl::SetPacketIndexerSettings ( in IPS\_RefTS\_t *RefTsOut*, in PacketIndexerSettings\_t *PacketIndexerSettings* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set the Packet Indexer Settings of an output TS.

**Parameters**

|    |                               |                            |
|----|-------------------------------|----------------------------|
| in | <i>RefTsOut</i>               | The output TS              |
| in | <i>PacketIndexer-Settings</i> | settings of Packet Indexer |

**Exceptions**

|                          |                                                                                                                                                                     |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"><li>• When called for non-ASI boards</li></ul>                                                                                    |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"><li>• When parse errors occur</li></ul>                                                                                           |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"><li>• When invalid references are passed</li><li>• When invalid settings are passed</li><li>• When writing to FW failed</li></ul> |

**Version**

Release 9.0

## 8.70 IndexPacketInterpreter

This contains types, enums and methods to configure IndexPacketInterpreter functionality.

### Classes

- struct [DCM::DeviceControl::IPI\\_Settings\\_t](#)
- struct [DCM::DeviceControl::InTS\\_IPI\\_Settings\\_t](#)  
*Information to change the IndexPacketInterpreter settings of an incoming TS.*
- struct [DCM::DeviceControl::TsPacketIndexerID\\_Data\\_t](#)

### Typedefs

- typedef sequence < [InTS\\_IPI\\_Settings\\_t](#) > [DCM::DeviceControl::InTS\\_IPI\\_Settings\\_List\\_t](#)  
*A sequence of [InTS\\_IndexPacketInterpreterSettings\\_t](#) entries.*

### Functions

- [InTS\\_IPI\\_Settings\\_List\\_t DCM::DeviceControl::InTS\\_IPI\\_SettingsGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IPS\\_RefTS\\_List\\_t](#) RefTsList) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the IndexPacketInterpreter settings of one or more input TS.*
- void [DCM::DeviceControl::InTS\\_IPI\\_SettingsSetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [InTS\\_IPI\\_Settings\\_List\\_t](#) InTS\_IPI\_Settings\_List) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Change the IndexPacketInterpreter settings for one or more existing incoming TS.*
- void [DCM::DeviceControl::InTS\\_IPI\\_SettingsDelL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IPS\\_RefTS\\_List\\_t](#) - RefTsList) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Revert the IndexPacketInterpreter setting to default for a list of input TSs.*
- void [DCM::DeviceControl::SetDefaultIPI\\_Settings](#) (in unsigned short SlotNbr, in boolean IPI\_Enabled) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Set default IndexPacketInterpreter setting for new input TS.*
- void [DCM::DeviceControl::GetDefaultIPI\\_Settings](#) (in unsigned short SlotNbr, out boolean IPI\_Enabled) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get current default IndexPacketInterpreter setting.*
- void [DCM::DeviceControl::GetTsPacketIndexerId](#) (in [IPS\\_RefTS\\_t](#) RefTsIn, out [TsPacketIndexerID\\_Data\\_t](#) TsPacketIndexerID\_Data) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the Packet Indexer Id of an input TS.*

#### 8.70.1 Detailed Description

This contains types, enums and methods to configure IndexPacketInterpreter functionality.

## 8.70.2 Typedef Documentation

## 8.70.2.1 typedef sequence&lt;InTS\_IPI\_Settings\_t&gt; DCM::DeviceControl::InTS\_IPI\_Settings\_List\_t

A sequence of InTS\_IndexPacketInterpreterSettings\_t\_t entries.

Definition at line 29389 of file DCM.idl.

## 8.70.3 Function Documentation

8.70.3.1 void DCM::DeviceControl::GetDefaultIPI\_Settings ( in unsigned short *SlotNbr*, out boolean *IPI\_Enabled* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get current default IndexPacketInterpreter setting.

## Parameters

|     |                    |                                           |
|-----|--------------------|-------------------------------------------|
| in  | <i>SlotNbr</i>     | BoardNr of which we want the information. |
| out | <i>IPI_Enabled</i> | boolean setting for new input TSs.        |

## Exceptions

|                          |                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>When parse errors occur</li> </ul>                                     |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When invalid references are passed</li> </ul>                          |

## Version

Release 9.0

8.70.3.2 void DCM::DeviceControl::GetTsPacketIndexerId ( in IPS\_RefTS\_t *RefTsIn*, out TsPacketIndexerID\_Data\_t *TsPacketIndexerID\_Data* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the Packet Indexer Id of an input TS.

## Parameters

|     |                                |                                              |
|-----|--------------------------------|----------------------------------------------|
| in  | <i>RefTsIn</i>                 | The input TS                                 |
| out | <i>TsPacket-IndexerID_Data</i> | The Packet Indexer Id and validity indicator |

**Exceptions**

|                          |                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>• When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                                     |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When invalid references are passed</li> </ul>                          |

**Version**

Release 9.0

**8.70.3.3** void DCM::DeviceControl::InTS\_IPI\_SettingsDelL ( in IPS\_Ref\_t *RefPhys*, in IPS\_RefTS\_List\_t *RefTsList* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Revert the IndexPacketInterpreter setting to default for a list of input TSs.

**Parameters**

|    |                  |                                              |
|----|------------------|----------------------------------------------|
| in | <i>RefPhys</i>   | The port for which to change to settings     |
| in | <i>RefTsList</i> | List of TSs for which to delete the settings |

**Exceptions**

|                          |                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>• When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                                     |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When invalid references are passed</li> </ul>                          |

**Version**

Release 9.0

**8.70.3.4** InTS\_IPI\_Settings\_List\_t DCM::DeviceControl::InTS\_IPI\_SettingsGetL ( in IPS\_Ref\_t *RefPhys*, in IPS\_RefTS\_List\_t *RefTsList* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the IndexPacketInterpreter settings of one or more input TS.

**Parameters**

|    |                  |                                                         |
|----|------------------|---------------------------------------------------------|
| in | <i>RefPhys</i>   | The port of which you want the information.             |
| in | <i>RefTsList</i> | A Ref_List_t, sequence of TS Ref's you want info about. |

**Returns**

InTS\_IPI\_Settings\_List\_t A sequence of ChangePrioBitInputTS\_t entries.

**Exceptions**

|                          |                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>When parse errors occur</li> </ul>                                     |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When invalid references are passed</li> </ul>                          |

- An empty ReTsfList means all TS refs.

**Version**

Release 9.0

**8.70.3.5** void DCM::DeviceControl::InTS\_IPI\_SettingsSetL ( in IPS\_Ref\_t *RefPhys*, in InTS\_IPI\_Settings\_List\_t *InTS\_IPI\_Settings\_List* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Change the IndexPacketInterpreter settings for one or more existing incoming TS.

**Parameters**

|    |                               |                                                      |
|----|-------------------------------|------------------------------------------------------|
| in | <i>RefPhys</i>                | The port for which parameters need to be changed.    |
| in | <i>InTS_IPI_Settings_List</i> | List of <a href="#">InTS_IPI_Settings_t</a> entries. |

**Exceptions**

|                          |                                                                                                                         |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li> </ul>           |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>When parse errors occur</li> </ul>                                               |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When invalid references are passed</li> <li>When writing to FW failed</li> </ul> |

**Version**

Release 9.0

**8.70.3.6** void DCM::DeviceControl::SetDefaultIPI\_Settings ( in unsigned short *SlotNbr*, in boolean *IPI\_Enabled* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set default IndexPacketInterpreter setting for new input TS.

**Parameters**

|    |                    |                                                         |
|----|--------------------|---------------------------------------------------------|
| in | <i>SlotNbr</i>     | Specifies the BoardNr on which to apply these defaults. |
| in | <i>IPI_Enabled</i> | boolean setting for new input TSs.                      |

**Exceptions**

|                          |                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"><li>• When called for non-ASI/non-ASI-SFN/non-ASI-SFN-MkII boards</li></ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"><li>• When parse errors occur</li></ul>                                     |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"><li>• When invalid references are passed</li></ul>                          |

Release 9.0

## 8.71 Deterministic Remux

This contains types, enums and methods to configure Deterministic Remultiplexing functionality.

### Classes

- struct [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_MDP\\_MultiplicationSettings\\_t](#)
- struct [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_RDCS\\_Settings\\_t](#)
- struct [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_TS\\_Output\\_Mode\\_t](#)

### Enumerations

- enum [DCM::DeviceControl::enASI\\_SFN\\_MKII\\_BoardMode](#) { [DCM::DeviceControl::eASI\\_SFN\\_MKII\\_Regular](#), [DCM::DeviceControl::eASI\\_SFN\\_MKII\\_DeterministicRemultiplexing](#) }
- enum [DCM::DeviceControl::enASI\\_SFN\\_MKII\\_TS\\_Output\\_Mode](#) { [DCM::DeviceControl::eASI\\_SFN\\_MKII\\_TS\\_Output\\_Main](#), [DCM::DeviceControl::eASI\\_SFN\\_MKII\\_TS\\_Output\\_RDCS](#), [DCM::DeviceControl::eASI\\_SFN\\_MKII\\_TS\\_Output\\_MainandRDCS](#) }

### Functions

- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_GetBoardMode](#) (in unsigned short BoardNr, out enASI\_SFN\_MKII\_BoardMode BoardMode) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get ASI SFN MKII board mode.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_SetBoardMode](#) (in unsigned short BoardNr, in enASI\_SFN\_MKII\_BoardMode BoardMode) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Set ASI SFN MKII board mode.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_GetTsOutputMode](#) (in IPS\_RefTS\_t RefTsOut, out ASI\_SFN\_MKII\_TS\_Output\_Mode\_t TS\_Mode) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the TS output mode.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_SetTsOutputMode](#) (in IPS\_RefTS\_t RefTsOut, in ASI\_SFN\_MKII\_TS\_Output\_Mode\_t TS\_Mode) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Set the TS output mode.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_GetMasterMuxId](#) (in unsigned short BoardNr, out unsigned short MasterMuxId) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the MasterMux ID of an ASI SFN MKII board.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_SetMasterMuxId](#) (in unsigned short BoardNr, in unsigned short MasterMuxId) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Set the MasterMux ID of an ASI SFN MKII board.*
- void [DCM::DeviceControl::ASI\\_SFN\\_MKII\\_GetRDCS\\_Settings](#) (in IPS\_RefTS\_t RefTsOut, out ASI\_SFN\_MKII\_RDCS\_Settings\_t RDCS\_Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get the RDCS Settings of an output TS.*

- void `DCM::DeviceControl::ASI_SFN_MKII_SetRDCS_Settings` (in `IPS_RefTS_t RefTsOut`, in `ASI_SFN_MKII_RDCS_Settings_t RDCS_Settings`) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported)

*Set the RDCS Settings of an output TS.*

### 8.71.1 Detailed Description

This contains types, enums and methods to configure Deterministic Remultiplexing functionality.

### 8.71.2 Enumeration Type Documentation

#### 8.71.2.1 enum `DCM::DeviceControl::enASI_SFN_MKII_BoardMode`

Enumerator:

*eASI\_SFN\_MKII\_Regular* Generic ASI SFN mode.

*eASI\_SFN\_MKII\_DeterministicRemultiplexing* Deterministic Re-multiplexing mode.

Definition at line 29515 of file DCM.idl.

#### 8.71.2.2 enum `DCM::DeviceControl::enASI_SFN_MKII_TS_Output_Mode`

Enumerator:

*eASI\_SFN\_MKII\_TS\_Output\_Main* Main SFN TS.

*eASI\_SFN\_MKII\_TS\_Output\_RDCS* RDCS TS of configured TS.

*eASI\_SFN\_MKII\_TS\_Output\_MainandRDCS* Main SFN TS and RDCS TS.

Definition at line 29521 of file DCM.idl.

### 8.71.3 Function Documentation

- 8.71.3.1 void `DCM::DeviceControl::ASI_SFN_MKII_GetBoardMode` ( in unsigned short *BoardNr*, out `enASI_SFN_MKII_BoardMode BoardMode` ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get ASI SFN MKII board mode.

Parameters

|     |                  |  |
|-----|------------------|--|
| in  | <i>BoardNr</i>   |  |
| out | <i>BoardMode</i> |  |

Exceptions

|                         |                                                                                             |
|-------------------------|---------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i> | <ul style="list-style-type: none"> <li>• When called for non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i> | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                 |

|                          |                                                                                        |
|--------------------------|----------------------------------------------------------------------------------------|
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When invalid references are passed</li> </ul> |
|--------------------------|----------------------------------------------------------------------------------------|

**Version**

Release 9.0

**8.71.3.2** void DCM::DeviceControl::ASI\_SF\_N\_MKII\_GetMasterMuxId ( in unsigned short *BoardNr*, out unsigned short *MasterMuxId* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the MasterMux ID of an ASI SFN MKII board.

**Parameters**

|     |                    |                              |
|-----|--------------------|------------------------------|
| in  | <i>BoardNr</i>     |                              |
| out | <i>MasterMuxId</i> | MasterMux ID(range 0..65535) |

**Exceptions**

|                          |                                                                                             |
|--------------------------|---------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>• When called for non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                 |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When invalid references are passed</li> </ul>      |

**Version**

Release 9.0

**8.71.3.3** void DCM::DeviceControl::ASI\_SF\_N\_MKII\_GetRDCS\_Settings ( in IPS\_RefTS\_t *RefTsOut*, out ASI\_SF\_N\_MKII\_RDCS\_Settings\_t *RDCS\_Settings* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported)

Get the RDCS Settings of an output TS.

**Parameters**

|     |                      |                           |
|-----|----------------------|---------------------------|
| in  | <i>RefTsOut</i>      | The output TS             |
| out | <i>RDCS_Settings</i> | settings of a RDCS TS Out |

**Exceptions**

|                         |                                                                                             |
|-------------------------|---------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i> | <ul style="list-style-type: none"> <li>• When called for non-ASI-SFN-MkII boards</li> </ul> |
|-------------------------|---------------------------------------------------------------------------------------------|

|                          |                                                                                                                                                           |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                                                                               |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When board is not in Deterministic Re-multiplexing mode</li> <li>• When invalid references are passed</li> </ul> |

**Version**

Release 9.0

**8.71.3.4** void DCM::DeviceControl::ASI\_SF\_N\_MKII\_GetTsOutputMode ( in IPS\_RefTS\_t *RefTsOut*, out ASI\_SF\_N\_MKII\_TS\_Output\_Mode\_t *TS\_Mode* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Get the TS output mode.

**Parameters**

|     |                 |               |
|-----|-----------------|---------------|
| in  | <i>RefTsOut</i> | The output TS |
| out | <i>TS_Mode</i>  |               |

**Exceptions**

|                          |                                                                                                                                                           |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>• When called for non-ASI-SFN-MkII boards</li> </ul>                                                               |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>• When parse errors occur</li> </ul>                                                                               |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>• When board is not in Deterministic Re-multiplexing mode</li> <li>• When invalid references are passed</li> </ul> |

**Version**

Release 9.0

**8.71.3.5** void DCM::DeviceControl::ASI\_SF\_N\_MKII\_SetBoardMode ( in unsigned short *BoardNr*, in enASI\_SF\_N\_MKII\_BoardMode *BoardMode* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set ASI SFN MKII board mode.

**Parameters**

|    |                  |  |
|----|------------------|--|
| in | <i>BoardNr</i>   |  |
| in | <i>BoardMode</i> |  |

**Exceptions**

|                          |                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI-SFN-MkII boards</li> </ul> |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>When parse errors occur</li> </ul>                 |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When invalid references are passed</li> </ul>      |

**Version**

Release 9.0

**8.71.3.6** void DCM::DeviceControl::ASI\_SFN\_MKII\_SetMasterMuxId ( in unsigned short *BoardNr*, in unsigned short *MasterMuxId* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set the MasterMux ID of an ASI SFN MKII board.

**Parameters**

|    |                    |                              |
|----|--------------------|------------------------------|
| in | <i>BoardNr</i>     |                              |
| in | <i>MasterMuxId</i> | MasterMux ID(range 0..65535) |

**Exceptions**

|                          |                                                                                                                                                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI-SFN-MkII boards</li> </ul>                                                                                                                                           |

| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When board is not in Deterministic Re-multiplexing mode</li> <li>When invalid references are passed</li> <li>When invalid output mode is given</li> <li>When writing to FW failed</li> </ul> |

**Version**

Release 9.0

**8.71.3.7** void DCM::DeviceControl::ASI\_SFN\_MKII\_SetRDCS\_Settings ( in IPS\_RefTS\_t *RefTsOut*, in ASI\_SFN\_MKII\_RDCS\_Settings\_t *RDCS\_Settings* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported)

Set the RDCS Settings of an output TS.

**Parameters**

|    |                      |                           |
|----|----------------------|---------------------------|
| in | <i>RefTsOut</i>      | The output TS             |
| in | <i>RDCS_Settings</i> | settings of a RDCS TS Out |

**Exceptions**

|                          |                                                                                                                                                                                                                                         |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported,:</i>  | <ul style="list-style-type: none"> <li>When called for non-ASI-SFN-MkII boards</li> </ul>                                                                                                                                               |
| <i>OpNotSucceeded,:</i>  | <ul style="list-style-type: none"> <li>When parse errors occur</li> </ul>                                                                                                                                                               |
| <i>OperationFailed,:</i> | <ul style="list-style-type: none"> <li>When board is not in Deterministic Re-multiplexing mode</li> <li>When invalid references are passed</li> <li>When invalid RDCS settings are passed</li> <li>When writing to FW failed</li> </ul> |

**Version**

Release 9.0

**8.71.3.8** void DCM::DeviceControl::ASI\_SFN\_MKII\_SetTsOutputMode ( in IPS\_RefTS\_t *RefTsOut*, in ASI\_SFN\_MKII\_TS\_Output\_Mode\_t *TS\_Mode* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

Set the TS output mode.

**Parameters**

|    |                 |               |
|----|-----------------|---------------|
| in | <i>RefTsOut</i> | The output TS |
| in | <i>TS_Mode</i>  |               |

**Exceptions**

**Version**

Release 9.0

## 8.72 IP Adapter

This contains types, enums and methods to configure the IP Gateway.

Collaboration diagram for IP Adapter:

### Classes

- struct [DCM::DCM\\_Notifications::Messages](#)  
*Notification sent by MB when a new message is available (alarms)*
- struct [DCM::DCM\\_Notifications::DCM\\_TsIdOnIdChange](#)  
*Notification sent by IO when an alarm configured as trigger changes current state (alarms) No parameters given.*
- struct [DCM::DCM\\_Notifications::Output\\_TS\\_Change](#)
- struct [DCM::DCM\\_Notifications::Output\\_TS\\_Delete](#)  
*Notification sent when a TS is deleted (removed from DCM).*
- struct [DCM::DCM\\_Notifications::Output\\_SI\\_TableChng](#)  
*Notification sent when a Table is added (starts streaming) or changed.*
- struct [DCM::DCM\\_Notifications::Output\\_SI\\_TableDel](#)  
*Notification sent when a Table is deleted (stops streaming).*

### Modules

- [IP Adapter SDI and RTP streams](#)  
*This contains types, enums and methods to configure the TSs of the multiplexer part in the device.*
- [General Purpose interface](#)  
*This contains types, enums and methods to get/set GPI settings.*

- [Engine](#)  
*Contains methods to control the Script Engine.*
- [Redundancy](#)  
*Contains methods to for the Anycast Redundancy feature.*
- [idl](#)  
*Contains methods to for engineering tests.*

## Typedefs

- typedef sequence< long > [DCM::DeviceCallback::LongStream](#)  
*A sequence of longs.*
- typedef sequence< LongStream > [DCM::DeviceCallback::NotifDataList](#)

## Enumerations

- enum [DCM::DeviceControl::eGbeSpeedMode\\_t](#) { [DCM::DeviceControl::e1Gbps](#), [DCM::DeviceControl::e10Gbps](#), [DCM::DeviceControl::eGbeSpeed\\_Reserved1](#), [DCM::DeviceControl::eGbeSpeed\\_Reserved2](#) }
- enum [DCM::DeviceControl::eSDI\\_NoStreamMode\\_t](#) { [DCM::DeviceControl::eBlackFrame](#), [DCM::DeviceControl::e0Vdc](#), [DCM::DeviceControl::eNoStream\\_Reserved1](#), [DCM::DeviceControl::eNoStream\\_Reserved2](#), [DCM::DeviceControl::eNoStream\\_Reserved3](#), [DCM::DeviceControl::eNoStream\\_Reserved4](#), [DCM::DeviceControl::eNoStream\\_Reserved5](#) }
- enum [DCM::DeviceControl::enDCG\\_BoardMode\\_t](#) { [DCM::DeviceControl::eDCG\\_BoardMode\\_IP\\_GW](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_ASI\\_GW](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_Reserved\\_1](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_Reserved\\_2](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_Reserved\\_3](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_Reserved\\_4](#), [DCM::DeviceControl::eDCG\\_BoardMode\\_Reserved\\_5](#) }
- enum [DCM::DeviceControl::enMValue\\_t](#) { [DCM::DeviceControl::eM1\\_000](#), [DCM::DeviceControl::eM1\\_001](#) }

## Functions

- void [DCM::DeviceControl::BoardCfgSetSpeedMode](#) (in unsigned short SlotNumber, in eGbeSpeedMode\_t SpeedMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*Set Gbe port pair speed to be used.*
- void [DCM::DeviceControl::BoardCfgGetSpeedMode](#) (in unsigned short SlotNumber, out eGbeSpeedMode\_t SpeedMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get the Gbe port pair speed that is currently used.*
- void [DCM::DeviceControl::HotSwapIO\\_Board](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Prepare a board for hot swap.*
- void [DCM::DeviceControl::SetMonitoredPort](#) (in unsigned short SlotNumber, in unsigned short SdiPortNbr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Mirror an (SDI) port, so that it can be monitored.*
- void [DCM::DeviceControl::GetMonitoredPort](#) (in unsigned short SlotNumber, out unsigned short PortNbr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get Mirror an (SDI) port, so that it can be monitored.*

- void [DCM::DeviceControl::SetVideoClockSync](#) (in unsigned short SlotNumber, in boolean bUseExtRef) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Indicate if the external clock reference input should be used or not to synchronize the output video or audio signals on.*
- void [DCM::DeviceControl::GetVideoClockSync](#) (in unsigned short SlotNumber, out boolean bUseExtRef) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Check if the external clock reference input is used or not to synchronize the output video or audio signals on.*
- void [DCM::DeviceControl::SetStreamClockSync](#) (in unsigned short SlotNumber, in boolean bUseExtRef) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Indicate if the external clock reference input should be used or not to synchronize the output video or audio signals on.*
- void [DCM::DeviceControl::GetStreamClockSync](#) (in unsigned short SlotNumber, out boolean bUseExtRef) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Check if the external clock reference input is used or not to synchronize the output video or audio signals on.*
- void [DCM::DeviceControl::SetSDI\\_NoStreamMode](#) (in unsigned short SlotNumber, in eSDI\_NoStreamMode\_t Mode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Specify output SDI or AES no stream mode.*
- void [DCM::DeviceControl::GetSDI\\_NoStreamMode](#) (in unsigned short SlotNumber, out eSDI\_NoStreamMode\_t Mode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Gets the output SDI no stream mode.*
- void [DCM::DeviceControl::DCG\\_GetBoardMode](#) (in unsigned short BoardNr, out enDCG\_BoardMode\_t enBoardMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get the Gateway board mode.*
- void [DCM::DeviceControl::DCG\\_SetBoardMode](#) (in unsigned short BoardNr, in enDCG\_BoardMode\_t enBoardMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Set the gateway board mode.*
- void [DCM::DeviceControl::DCG\\_SetMValue](#) (in unsigned short BoardNr, in enMValue\_t enMValue) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)
- enMValue\_t [DCM::DeviceControl::DCG\\_GetMValue](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)
- void [DCM::DeviceCallback::Notify](#) (in string NotificationName, in NotifDataList EventDataList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Notifies changes in the server that can be used as trigger.*

### Variables

- unsigned short [DCM::DeviceControl::IPS\\_Ref\\_t::BoardNr](#)  
*The board location the board sits in.*
- unsigned short [DCM::DeviceControl::IPS\\_Ref\\_t::PortNr](#)  
*The physical port.*
- IPS\_Ref\_t [DCM::DeviceControl::IPS\\_RefTS\\_t::PhysRef](#)  
*See [IPS\\_Ref\\_t](#).*
- unsigned long [DCM::DeviceControl::IPS\\_RefTS\\_t::Ref](#)

*This is the TS index.*

- unsigned short `DCM::DeviceControl::MM_ID_t::MM_TypeID`  
*input/output + type of message or measurement*
- `IPS_RefTS_t` `DCM::DeviceControl::MM_ID_t::Ref`  
*board + port + TSIndex*
- unsigned short `DCM::DeviceControl::MM_ID_t::SubID1`
- unsigned short `DCM::DeviceControl::MM_ID_t::SubID2`
- long `DCM::DeviceControl::Time::Year`  
*From year 0 onwards.*
- octet `DCM::DeviceControl::Time::Month`  
*From 1 to 12.*
- octet `DCM::DeviceControl::Time::DayOfMonth`  
*From 1 to 28, 29, 30 or 31.*
- octet `DCM::DeviceControl::Time::Hour`  
*From 0 to 23.*
- octet `DCM::DeviceControl::Time::Minute`  
*From 0 to 59.*
- octet `DCM::DeviceControl::Time::Second`  
*From 0 to 59.*
- eNTP\_TallyCodes `DCM::DeviceControl::NTP_Stats_t::TallyCode`
- string `DCM::DeviceControl::NTP_Stats_t::RefID`  
*Reference Clock Identifier.*
- octet `DCM::DeviceControl::NTP_Stats_t::Stratum`  
*Defines the distance to the reference clock.*
- eNTP\_RefClockTypes `DCM::DeviceControl::NTP_Stats_t::RefClockType`
- long `DCM::DeviceControl::NTP_Stats_t::LastPoll`  
*Time that elapsed since last poll attempt.*
- long `DCM::DeviceControl::NTP_Stats_t::PollInterval`  
*Current interval between poll attempts, in seconds.*
- string `DCM::DeviceControl::NTP_Stats_t::Reachability`  
*Indicates the reachability status of the peer as an octal number.*
- double `DCM::DeviceControl::NTP_Stats_t::Delay`  
*Indicates the roundtrip delay of the peer clock relative to the local clock over the network path between them, in seconds.*
- double `DCM::DeviceControl::NTP_Stats_t::Offset`  
*Indicates the offset of the peer clock relative to the local clock, in seconds.*
- double `DCM::DeviceControl::NTP_Stats_t::Jitter`  
*The estimated time error of the system clock measured as an exponential average of RMS time differences.*
- string `DCM::DeviceControl::NTP_Info_t::IP`
- `NTP_Stats_t` `DCM::DeviceControl::NTP_Info_t::Stats`
- `IPS_RefTS_t` `DCM::DeviceControl::Table_Sync_Info_t::RefTS`  
*input TS where table has to be retrieved from*
- unsigned long `DCM::DeviceControl::Table_Sync_Info_t::TableId`  
*0x70 for TDT of 0x73 for TOT or 0xCD for STT*
- unsigned short `DCM::DeviceControl::Table_Sync_Info_t::Pid`  
*pid value. Typically 0x14 for TDT/TOT and 0x1FFB for STT < If INVALID\_PID\_VALUE (0xFFFF) is specified then typical pid value < will be used automatically*

- short `DCM::DeviceControl::Table_Sync_Info_t::Offset`  
*value in ms that is added to the T\*T time before applying it to the system clock. < Can be a negative value!  
Value in seconds (steps of 1000ms) to correct GPS < time to UTC time. Not supported for the moment and  
always reset to 0.*
- string `DCM::DeviceControl::NotifData_t::Name`
- unsigned long `DCM::DeviceControl::NotifData_t::Behaviour`  
*0: send buffered, 1: send directly*
- string `DCM::DeviceControl::TrapDestination::IPAddress`
- string `DCM::DeviceControl::TrapDestination::TrapCommunity`  
*Max 40 char.*
- string `DCM::DeviceControl::SNMPCommunity::Community`  
*Max 40 char.*
- SNMPOperationRights `DCM::DeviceControl::SNMPCommunity::Rights`
- char `DCM::DeviceControl::VersionParts::VersionType`  
*'A' for a, 'B' for b, D for demo and V for release*
- short `DCM::DeviceControl::VersionParts::MajorNumber`
- short `DCM::DeviceControl::VersionParts::MinorNumber`
- short `DCM::DeviceControl::VersionParts::BuildNumber`
- string `DCM::DeviceControl::VersionInfo::ComponentName`  
*MAX string length = 20.*
- string `DCM::DeviceControl::VersionInfo::VersionName`  
*MAX string length = 20.*
- VersionParts `DCM::DeviceControl::VersionInfo::VersParts`
- string `DCM::DeviceControl::BoardIdentification::BoardName`
- string `DCM::DeviceControl::BoardIdentification::OrderNumber`
- string `DCM::DeviceControl::BoardIdentification::SerialNumber`
- string `DCM::DeviceControl::BoardIdentification::UserName`
- string `DCM::DeviceControl::BoardIdentification::SlotName`  
*Max 40 chars e.g. Input, Output, Aggregate, ... (refers to the backplane name)*
- string `DCM::DeviceControl::BoardIdentification::SlotId`  
*Max 5 chars e.g. 1A (refers to the backplane id)*
- VersionInfoList `DCM::DeviceControl::BoardIdentification::BoardVersion`
- string `DCM::DeviceControl::UniqueDeviceId_t::Id`  
*The ID of the info field.*
- string `DCM::DeviceControl::UniqueDeviceId_t::Info`  
*Unique device identifier info field.*
- unsigned long `DCM::DeviceControl::ModuleExceptionTrace_t::ModuleId`
- string `DCM::DeviceControl::ModuleExceptionTrace_t::ModuleName`
- boolean `DCM::DeviceControl::ModuleExceptionTrace_t::ExceptionTraceEnabled`
- unsigned short `DCM::DeviceControl::BoardInfo_t::BoardNumber`  
*The board location the board sits in.*
- eBoardType `DCM::DeviceControl::BoardInfo_t::BoardType`  
*The type. See DCM\_Types.idl.*
- unsigned short `DCM::DeviceControl::BoardInfo_V2_t::BoardNumber`  
*The board location the board sits in.*
- eBoardType\_V2 `DCM::DeviceControl::BoardInfo_V2_t::BoardType`  
*The type. See DCM\_Types.idl.*
- IPS\_Ref\_t `DCM::DeviceControl::BoardCfg_t::Location`

- The board location and port.*

  - IPS\_Ref\_t [DCM::DeviceControl::BoardCfg\\_t::BackupLocation](#)

*For ASI a backup input can be specified.*
  - string [DCM::DeviceControl::BoardCfg\\_t::UserName](#)

*A user defined name. Max. 40 characters.*
  - eIOInterfaceType [DCM::DeviceControl::BoardCfg\\_t::IOInterfaceType](#)

*The type of the port (ASI/GbE).*
  - eIOType [DCM::DeviceControl::BoardCfg\\_t::IOType](#)

*The direction of the port.*
  - boolean [DCM::DeviceControl::BoardCfg\\_t::Enabled](#)

*Whether this port is enabled or disabled.*
  - unsigned long [DCM::DeviceControl::BoardCfg\\_t::PortProperty](#)

*Read only Bitmap used by GUI to display specific icons. Bit: 0 Individual GbE port streaming state Bit: 1 This port is an SFP port (GbE, Sdi, ...). A user can plug in an appropriate SFP. Bit: 2 This port is a DetMux RDCS TS port. Bit: 31 Monitoring port, restricted functionality Other bits: Future use. (0 for the moment)*
- IPS\_Ref\_t [DCM::DeviceControl::BoardCfg\\_V2\\_t::Location](#)

*The board location and port.*
- IPS\_Ref\_t [DCM::DeviceControl::BoardCfg\\_V2\\_t::BackupLocation](#)

*For ASI a backup input can be specified.*
- string [DCM::DeviceControl::BoardCfg\\_V2\\_t::UserName](#)

*A user defined name. Max. 40 characters.*
- eIOInterfaceType\_V2 [DCM::DeviceControl::BoardCfg\\_V2\\_t::IOInterfaceType](#)

*The type of the port (ASI/GbE).*
- eIOType\_V2 [DCM::DeviceControl::BoardCfg\\_V2\\_t::IOType](#)

*The direction of the port.*
- ePortEnabledMode [DCM::DeviceControl::BoardCfg\\_V2\\_t::PortEnabledMode](#)

*How the port mode is configured.*
- boolean [DCM::DeviceControl::BoardCfg\\_V2\\_t::EnabledStatus](#)

*Whether the status of this port is enabled or disabled.*
- unsigned long [DCM::DeviceControl::BoardCfg\\_V2\\_t::PortProperty](#)

*Read only Bitmap used by GUI to display specific icons. Bit: 0 Individual GbE port streaming state Bit: 1 This port is an SFP port (GbE, Sdi, ...). A user can plug in an appropriate SFP. Bit: 2 This port is a DetMux RDCS TS port. Bit: 31 Monitoring port, restricted functionality Other bits: Future use. (0 for the moment)*
- string [DCM::DeviceControl::ComponentTemperature\\_t::Name](#)

*Possible values: "FEC Die" (I/O board, DaughterBoard 2) "FEC Ambient" (I/O board, DaughterBoard 2) "Ambient 1" (Main board, DaughterBoard 0) "Ambient 2" (Main board, DaughterBoard 0)*
- long [DCM::DeviceControl::ComponentTemperature\\_t::Temperature](#)

*The temperature of this component in degrees centigrade.*
- unsigned short [DCM::DeviceControl::BoardTemperature\\_t::DaughterBoard](#)

*The daughter board identification as returned in BoardsConnected.*
- ComponentTemperature\_List\_t [DCM::DeviceControl::BoardTemperature\\_t::ComponentTemperature\\_List](#)
- unsigned long [DCM::DeviceControl::IP\\_Subnet\\_t::Properties](#)

*Read only bitmap containing properties for this Subnet Bit 0: Read only This subnet is automatically configured and cannot be changed Bit 1: Main - This subnet is the main subnet.*
- string [DCM::DeviceControl::IP\\_Subnet\\_t::IP\\_Addr](#)
- unsigned short [DCM::DeviceControl::IP\\_Subnet\\_t::PrefixLength](#)
- string [DCM::DeviceControl::IP\\_Subnet\\_t::DefaultGateway](#)

- IP\_List\_t [DCM::DeviceControl::IP\\_Subnet\\_t::AliasList](#)
- boolean [DCM::DeviceControl::NicTeam\\_Settings::bNicTeam\\_Enabled](#)
- eNicTeamMode [DCM::DeviceControl::NicTeam\\_Settings::Mode](#)
- NicTeam\_MemberList\_t [DCM::DeviceControl::NicTeam\\_Settings::MemberList](#)
- unsigned long [DCM::DeviceControl::NicTeam\\_Settings::UpDelay](#)
- unsigned long [DCM::DeviceControl::NicTeam\\_Settings::DownDelay](#)
- IPS\_Ref\_t [DCM::DeviceControl::NicTeam\\_MemberStatus\\_t::Port](#)
- eLinkStatus [DCM::DeviceControl::NicTeam\\_MemberStatus\\_t::Status](#)
- unsigned long [DCM::DeviceControl::NicTeam\\_MemberStatus\\_t::FailureCount](#)
- IPS\_Ref\_t [DCM::DeviceControl::NicTeamStatus::ActivePort](#)
- NicTeam\_MemberStatusList\_t [DCM::DeviceControl::NicTeamStatus::MemberStatusList](#)
- string [DCM::DeviceControl::IPS\\_UDP\\_Socket\\_t::IP](#)
- unsigned short [DCM::DeviceControl::IPS\\_UDP\\_Socket\\_t::Port](#)  
*Recommended UDP Port range: 1024 (0X400) .. 65535 (0xFFFF).*
- IPS\_RefTS\_t [DCM::DeviceControl::IPS\\_InputTS\\_t::RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::IPS\\_InputTS\\_t::Socket](#)  
*Unique IP-Address and UDP port combination.*
- unsigned long [DCM::DeviceControl::IPS\\_InputTS\\_t::TSID](#)  
*TSID range: [0..65535].*
- unsigned long [DCM::DeviceControl::IPS\\_InputTS\\_t::ONID](#)  
*ONID range: [0..65535].*
- unsigned long [DCM::DeviceControl::IPS\\_InputTS\\_t::NumberOfServices](#)  
*Number of services present on this input TS.*
- unsigned long [DCM::DeviceControl::IPS\\_InputTS\\_t::TS\\_InProperty](#)  
*Read only Bitmap used by GUI to display specific icons (. . .)*
- eEsTypeStandard [DCM::DeviceControl::IPS\\_InputTS\\_t::InputStandard](#)  
*Indicates how different PID (ES) types must be interpreted.*
- IPS\_RefTS\_t [DCM::DeviceControl::IPS\\_Gbe\\_InputTS\\_t::RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::IPS\\_Gbe\\_InputTS\\_t::Socket](#)  
*Unique IP-Address and UDP port combination.*
- string [DCM::DeviceControl::IPS\\_Gbe\\_InputTS\\_t::SourceIP](#)  
*The source IP-Address of the incoming TS.*
- IPS\_RefTS\_t [DCM::DeviceControl::Debug\\_Gbe\\_InputTS\\_t::RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::Debug\\_Gbe\\_InputTS\\_t::Socket](#)  
*Unique IP-Address and UDP port combination.*
- string [DCM::DeviceControl::Debug\\_Gbe\\_InputTS\\_t::SourceIP](#)  
*The source IP-Address of the incoming TS.*
- unsigned long [DCM::DeviceControl::Debug\\_Gbe\\_InputTS\\_t::HwIndex](#)  
*The hardware index for a stream.*
- IPS\_RefTS\_t [DCM::DeviceControl::IPS\\_ChangeInputTS\\_t::RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- eEsTypeStandard [DCM::DeviceControl::IPS\\_ChangeInputTS\\_t::InputStandard](#)  
*Indicates how different PID (ES) types must be interpreted.*
- IPS\_RefTS\_t [DCM::DeviceControl::Debug\\_Gbe\\_OutputTS\\_t::RefOut](#)

- The location of the TS (Board, Port and Ts Ident).*

  - IPS\_UDP\_Socket\_t [DCM::DeviceControl::Debug\\_Gbe\\_OutputTS\\_t::DestSocket](#)

*Unique destination IP-Address and UDP port combination.*
- unsigned long [DCM::DeviceControl::Debug\\_Gbe\\_OutputTS\\_t::HwIndex](#)

*The hardware index for a stream.*
- IPS\_RefTS\_t [DCM::DeviceControl::IPS\\_OutputTS\\_t::Ref](#)

*The location of the TS (Board, Port and Ref).*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::IPS\\_OutputTS\\_t::Socket](#)

*Unique IPv4-Address and UDP port combination.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_t::Bitrate](#)

*Bitrate of the outgoing TS (in bps).*
- eIPS\_StreamingState [DCM::DeviceControl::IPS\\_OutputTS\\_t::State](#)
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_t::TSID](#)

*TSID range: 0..65535.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_t::ONID](#)

*ONID range: 0..65535.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_t::NumberOfServices](#)

*Number of services present on this output TS.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_t::TS\\_OutProperty](#)

*Read only Bitmap used by GUI to display specific icons (.).*
- eEsTypeStandard [DCM::DeviceControl::IPS\\_OutputTS\\_t::OutputStandard](#)

*Indicates how different PID (ES) types must be interpreted.*
- IPS\_RefTS\_t [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::Ref](#)

*The location of the TS (Board, Port and Ref).*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::Socket](#)

*Unique IPv4-Address and UDP port combination.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::Bitrate](#)

*Bitrate of the outgoing TS (in bps).*
- enStreamingSetting\_t [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::Setting](#)

*Streaming setting of the outgoing TS.*
- eIPS\_StreamingState [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::State](#)
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::TSID](#)

*Read only state.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::ONID](#)

*ONID range: 0..65535.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::NumberOfServices](#)

*Number of services present on this output TS.*
- unsigned long [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::TS\\_OutProperty](#)

*Read only Bitmap used by GUI to display specific icons (.).*
- eEsTypeStandard [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t::OutputStandard](#)

*Indicates how different PID (ES) types must be interpreted.*
- boolean [DCM::DeviceControl::IPS\\_LookupTS\\_t::bInput](#)

*Indicates if it is an input or output TS.*
- IPS\_Ref\_t [DCM::DeviceControl::IPS\\_LookupTS\\_t::Ref](#)

*The location to search (Board, Port). Board number is ignored.*
- IPS\_UDP\_Socket\_t [DCM::DeviceControl::IPS\\_LookupTS\\_t::Socket](#)

*Will be ignored on ASI board.*

VSE Name of the Backup VSE (max length = 20).
- string `DCM::DeviceControl::SMX36_VSEBackup_V2_t::BackupVideoStreamEncoderName`  
future Name of the video stream on which the statmuxing is running.
- `SMX36_VSEBackupState_V2_e` `DCM::DeviceControl::SMX36_VSEBackup_V2_t::BackupState`  
State of the configured VSE backup.
- string `DCM::DeviceControl::IPSecHost::PeerIPAddress`  
The IP address of the IPsec capable host.
- string `DCM::DeviceControl::IPSecHost::PreSharedKey`  
The preshard key used for setting up IPsec.
- `eExtIpServices` `DCM::DeviceControl::ExtIpServiceCtrl::Service`
- boolean `DCM::DeviceControl::ExtIpServiceCtrl::bEnabled`
- `enPSBSSocketType` `DCM::DeviceControl::IpServiceDisplayData::SckType`  
*Tcp, udp, tcp6, udp6, ...*
- string `DCM::DeviceControl::IpServiceDisplayData::ItfName`  
Interface of listening port, or 'all'.
- string `DCM::DeviceControl::IpServiceDisplayData::LocalIp`  
IP address of local itf or 0.0.0.0 (any)
- string `DCM::DeviceControl::IpServiceDisplayData::RemoteIp`  
Remote IP address or 0.0.0.0 (any)
- unsigned short `DCM::DeviceControl::IpServiceDisplayData::LocalPort`  
Port number of listening port.
- unsigned short `DCM::DeviceControl::IpServiceDisplayData::RemotePort`  
0 or port number in case of established connection
- string `DCM::DeviceControl::IpServiceDisplayData::ProtoName`  
Name of application level protocol if meaningful one exists, e.g. ssh.
- string `DCM::DeviceControl::IpServiceDisplayData::ProcessName`  
Name of process that has opened the port.
- string `DCM::DeviceControl::IpServiceDisplayData::Description`  
Usage description and features that are related.
- unsigned long `DCM::DeviceControl::IpServiceDisplayData::IpSvcProperty`  
Bitmap:

### 8.72.1 Detailed Description

This contains types, enums and methods to configure the IP Gateway.

### 8.72.2 Typedef Documentation

#### 8.72.2.1 typedef sequence<long> `DCM::DeviceCallback::LongStream`

A sequence of longs.

Definition at line 32201 of file DCM.idl.

### 8.72.2.2 typedef sequence<LongStream> DCM::DeviceCallback::NotifDataList

Definition at line 32205 of file DCM.idl.

## 8.72.3 Enumeration Type Documentation

### 8.72.3.1 enum DCM::DeviceControl::eGbeSpeedMode\_t

Enumerator:

- e1Gbps* Configures the Gbe port pair to work at a speed of 1 Gbps.
- e10Gbps* Configures the Gbe port pair to work at a speed of 10 Gbps.
- eGbeSpeed\_Reserved1* Future use.
- eGbeSpeed\_Reserved2* Future use.

Definition at line 29715 of file DCM.idl.

### 8.72.3.2 enum DCM::DeviceControl::enDCG\_BoardMode\_t

Enumerator:

- eDCG\_BoardMode\_IP\_GW* IP Gateway.
- eDCG\_BoardMode\_ASI\_GW* ASI Gateway.
- eDCG\_BoardMode\_Reserved\_1* not supported yet
- eDCG\_BoardMode\_Reserved\_2* not supported yet
- eDCG\_BoardMode\_Reserved\_3* not supported yet
- eDCG\_BoardMode\_Reserved\_4* not supported yet
- eDCG\_BoardMode\_Reserved\_5* not supported yet

Definition at line 29734 of file DCM.idl.

### 8.72.3.3 enum DCM::DeviceControl::enMValue\_t

Enumerator:

- eM1\_000* Choose 25 or 30 or 60 for 1080i or 1080p.
- eM1\_001* Choose 25 or 29.97 or 59.94 for 1080i or 1080p.

Definition at line 29745 of file DCM.idl.

### 8.72.3.4 enum DCM::DeviceControl::eSDI\_NoStreamMode\_t

Enumerator:

- eBlackFrame* For video: Black frames. For audio: Silence.
- e0Vdc* No signal.
- eNoStream\_Reserved1* Future use.
- eNoStream\_Reserved2* Future use.
- eNoStream\_Reserved3* Future use.
- eNoStream\_Reserved4* Future use.
- eNoStream\_Reserved5* Future use.

Definition at line 29723 of file DCM.idl.

## 8.72.4 Function Documentation

**8.72.4.1** void DCM::DeviceControl::BoardCfgGetSpeedMode ( in unsigned short *SlotNumber*, out eGbeSpeedMode\_t *SpeedMode* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get the Gbe port pair speed that is currently used.

## Parameters

|     |                   |                                                                  |
|-----|-------------------|------------------------------------------------------------------|
| in  | <i>SlotNumber</i> | Slot number                                                      |
| out | <i>SpeedMode</i>  | SpeedMode ///< The actual speed that the Gbe port pair works in. |

## Exceptions

|                       |                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway. |
| <i>OpNotSucceeded</i> | In case of                                                                        |

## Version

Release 7.0

**8.72.4.2** void DCM::DeviceControl::BoardCfgSetSpeedMode ( in unsigned short *SlotNumber*, in eGbeSpeedMode\_t *SpeedMode* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Set Gbe port pair speed to be used.

## Parameters

|    |                   |                                                                        |
|----|-------------------|------------------------------------------------------------------------|
| in | <i>SlotNumber</i> | Slot number                                                            |
| in | <i>SpeedMode</i>  | SpeedMode ///< The actual speed that the Gbe port pair should work in. |

## Exceptions

|                       |                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway. |
| <i>OpNotSucceeded</i> | In case of                                                                        |

## Note

- Switching speed mode will cause a firmware reset and thus is service affecting !!

## Version

Release 7.0

**8.72.4.3** void DCM::DeviceControl::DCG\_GetBoardMode ( in unsigned short *BoardNr*, out enDCG\_BoardMode\_t *enBoardMode* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get the Gateway board mode.

**Parameters**

|     |                    |                          |
|-----|--------------------|--------------------------|
| in  | <i>BoardNr</i>     | The gateway board number |
| out | <i>enBoardMode</i> | Requested board mode     |

**Exceptions**

|                       |                                                                        |
|-----------------------|------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main or the board is not an IP Video Gateway board. |
|-----------------------|------------------------------------------------------------------------|

**Version**

Release 8.2

**8.72.4.4** `enMValue_t DCM::DeviceControl::DCG_GetMValue ( in unsigned short BoardNr )` raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**Parameters**

|    |                |                          |
|----|----------------|--------------------------|
| in | <i>BoardNr</i> | The gateway board number |
|----|----------------|--------------------------|

**Exceptions**

|                       |                                                                        |
|-----------------------|------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main or the board is not an IP Video Gateway board. |
|-----------------------|------------------------------------------------------------------------|

**Version**

Release 8.9

**8.72.4.5** `void DCM::DeviceControl::DCG_SetBoardMode ( in unsigned short BoardNr, in enDCG_BoardMode_t enBoardMode )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Set the gateway board mode.

**Parameters**

|    |                    |                          |
|----|--------------------|--------------------------|
| in | <i>BoardNr</i>     | The gateway board number |
| in | <i>enBoardMode</i> | Board mode to set        |

**Exceptions**

|                       |                                                                                                                      |
|-----------------------|----------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main or the board is not an IP Video Gateway board.                                               |
| <i>OpNotSucceeded</i> | if the new board mode is different from the current board mode and there are currently IP or ASI streams configured. |

**Version**

Release 8.2

**8.72.4.6** `void DCM::DeviceControl::DCG_SetMValue ( in unsigned short BoardNr, in enMValue_t enMValue )` raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**Parameters**

|    |                 |                          |
|----|-----------------|--------------------------|
| in | <i>BoardNr</i>  | The gateway board number |
| in | <i>enMValue</i> | Board mode to set        |

**Exceptions**

|                       |                                                                        |
|-----------------------|------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main or the board is not an IP Video Gateway board. |
|-----------------------|------------------------------------------------------------------------|

**Version**

Release 8.9

**8.72.4.7** void DCM::DeviceControl::GetMonitoredPort ( in unsigned short *SlotNumber*, out unsigned short *PortNbr* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get Mirror an (SDI) port, so that it can be monitored.

**Parameters**

|     |                   |                                      |
|-----|-------------------|--------------------------------------|
| in  | <i>SlotNumber</i> | Slot number                          |
| out | <i>PortNbr</i>    | The port being mirrored or monitored |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of                                                                                               |

**Version**

Release 7.0

**8.72.4.8** void DCM::DeviceControl::GetSDI\_NoStreamMode ( in unsigned short *SlotNumber*, out eSDI\_NoStreamMode\_t *Mode* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the output SDI no stream mode.

**Parameters**

|     |                   |                                                                                                                                                            |
|-----|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in  | <i>SlotNumber</i> | Slot number                                                                                                                                                |
| out | <i>Mode</i>       | Specifies what the signal should will look like when SDI or AES output is "not streaming": either black frame for video / silence for audio or else 0 V dc |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>•</li> </ul>                                           |

**Version**

Release 7.0

**8.72.4.9** void DCM::DeviceControl::GetStreamClockSync ( in unsigned short *SlotNumber*, out boolean *bUseExtRef* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Check if the external clock reference input is used or not to synchronize the output video or audio signals on.

**Parameters**

|     |                   |                                                       |
|-----|-------------------|-------------------------------------------------------|
| in  | <i>SlotNumber</i> | Slot number                                           |
| out | <i>bUseExtRef</i> | True means the external clock reference input is used |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>•</li> </ul>                                           |

**Version**

Release 11.10

**8.72.4.10** void DCM::DeviceControl::GetVideoClockSync ( in unsigned short *SlotNumber*, out boolean *bUseExtRef* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Check if the external clock reference input is used or not to synchronize the output video or audio signals on.

**Parameters**

|     |                   |                                                       |
|-----|-------------------|-------------------------------------------------------|
| in  | <i>SlotNumber</i> | Slot number                                           |
| out | <i>bUseExtRef</i> | True means the external clock reference input is used |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
|-----------------------|----------------------------------------------------------------------------------------------------------|

|                       |                                                               |
|-----------------------|---------------------------------------------------------------|
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li></li> </ul> |
|-----------------------|---------------------------------------------------------------|

**Version**

Release 7.0

**Deprecated**

**8.72.4.11** void DCM::DeviceControl::HotSwapIO\_Board ( in unsigned short *BoardNr* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Prepare a board for hot swap.

**Parameters**

|    |                |              |
|----|----------------|--------------|
| in | <i>BoardNr</i> | Board number |
|----|----------------|--------------|

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSucceeded</i> | Never thrown.                                                                                            |
| <i>OpNotAllowed</i>   | Never thrown.                                                                                            |
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |

**Version**

Release 7.0

**8.72.4.12** void DCM::DeviceCallback::Notify ( in string *NotificationName*, in NotifDataList *EventDataList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Notifies changes in the server that can be used as trigger.

**Parameters**

|    |                          |                                                                     |
|----|--------------------------|---------------------------------------------------------------------|
| in | <i>Notification-Name</i> | Name of Notification type (see <a href="#">DCM_Notifications</a> ). |
| in | <i>EventDataList</i>     | list of notifications of the given type with parameters.            |

**Remarks**

This GIOP-request doesn't expect a GIOP-reply

**Exceptions**

|                       |                                             |
|-----------------------|---------------------------------------------|
| <i>OpNotSucceeded</i> | PhysPort does not specify a valid mgmt port |
|-----------------------|---------------------------------------------|

**8.72.4.13** void DCM::DeviceControl::SetMonitoredPort ( in unsigned short *SlotNumber*, in unsigned short *SdiPortNbr* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Mirror an (SDI) port, so that it can be monitored.

#### Parameters

|    |                   |                                          |
|----|-------------------|------------------------------------------|
| in | <i>SlotNumber</i> | Slot number                              |
| in | <i>SdiPortNbr</i> | The SDI port to be mirrored or monitored |

#### Exceptions

|                       |                                                                                                                                |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                       |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references like a port number that is not an SDI port nbr</li> </ul> |

#### Version

Release 7.0

**8.72.4.14** void DCM::DeviceControl::SetSDI\_NoStreamMode ( in unsigned short *SlotNumber*, in eSDI\_NoStreamMode\_t *Mode* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Specify output SDI or AES no stream mode.

#### Parameters

|    |                   |                                                                                                                                                       |
|----|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| in | <i>SlotNumber</i> | Slot number                                                                                                                                           |
| in | <i>Mode</i>       | Specifies what the signal should look like when SDI or AES output is "not streaming": either black frame for video / silence for audio or else 0 V dc |

#### Exceptions

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of illegal mode <ul style="list-style-type: none"> <li></li> </ul>                               |

**Version**

Release 7.0

**8.72.4.15** void DCM::DeviceControl::SetStreamClockSync ( in unsigned short *SlotNumber*, in boolean *bUseExtRef* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Indicate if the external clock reference input should be used or not to synchronize the output video or audio signals on.

**Parameters**

|    |                   |                                                              |
|----|-------------------|--------------------------------------------------------------|
| in | <i>SlotNumber</i> | Slot number                                                  |
| in | <i>bUseExtRef</i> | True means the external clock reference input should be used |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of                                                                                               |

**Version**

Definition at line 17682 of file DCM.idl.

#### **8.72.5.25 unsigned long DCM::DeviceControl::TC\_AudioStatus\_t::AdjustedBitrate**

The real output bitrate, after input mode and sample rate have been taken into account.

Definition at line 13146 of file DCM.idl.

#### **8.72.5.26 unsigned short DCM::DeviceControl::DPI\_PidCouple\_t::AdPid**

Ad Input PID value - INVALID\_PID\_VALUE if rule == PassMain.

Definition at line 17119 of file DCM.idl.

#### **8.72.5.27 unsigned long DCM::DeviceControl::ASI\_DTF\_t::AFInterval**

The interval between two adaptation fields, in ms.

Definition at line 21988 of file DCM.idl.

#### **8.72.5.28 unsigned long DCM::DeviceControl::ASI\_DTF\_Ex\_t::AFInterval**

The interval between two adaptation fields, in ms.

Definition at line 22006 of file DCM.idl.

#### **8.72.5.29 unsigned short DCM::DeviceControl::RipSettings\_t::AlarmMetric**

RIP metric to be advertised when TS is not streaming or in bad shape. Range [1,16], default 16.

Definition at line 31928 of file DCM.idl.

#### **8.72.5.30 MM\_ID\_t DCM::DeviceControl::AlarmTriggerRule\_t::AlarmRef**

Definition at line 21407 of file DCM.idl.

#### **8.72.5.31 BitrateAlarmSetting\_t DCM::DeviceControl::OutTS\_AlarmSetting\_t::AlarmSetting**

The alarm settings themselves.

Definition at line 22998 of file DCM.idl.

#### **8.72.5.32 MsgSeverity DCM::DeviceControl::MM\_MeasurementStat::AlarmSeverity**

Definition at line 22633 of file DCM.idl.

**8.72.5.33 IP\_List.t DCM::DeviceControl::IP\_Subnet\_t::AliasList**

Definition at line 2066 of file DCM.idl.

**8.72.5.34 AlternateSourceList.t DCM::DeviceControl::AlternateSourceSettings\_t::AlternateSources**

A list of all the alternate sources.

Definition at line 17732 of file DCM.idl.

**8.72.5.35 AlternateSrcId.t DCM::DeviceControl::ComponentMergeCriterium\_t::AlternateSrcId**

Definition at line 5069 of file DCM.idl.

**8.72.5.36 AlternateSrcId.t DCM::DeviceControl::AltSrcMergedSetting\_t::AlternateSrcId**

Definition at line 5266 of file DCM.idl.

**8.72.5.37 AlternateSrcId.t DCM::DeviceControl::PcrSetting\_t::AlternateSrcId**

Identifies the alternate service for a specific output service.

Definition at line 5976 of file DCM.idl.

**8.72.5.38 AlternateSrcId.t DCM::DeviceControl::AlternateSource\_t::AlternateSrcId**

the ID of this alternate source (read-only)

Definition at line 17724 of file DCM.idl.

**8.72.5.39 AlternateSrcId.t DCM::DeviceControl::AltSrcBU\_Setting\_t::AlternateSrcId**

Definition at line 23205 of file DCM.idl.

**8.72.5.40 AlternateSrcId.t DCM::DeviceControl::AltSrcMergeActiveInSvc\_t::AlternateSrcId**

The id of the alternate svc where the merge svc is located.

Definition at line 23248 of file DCM.idl.

**8.72.5.41 boolean DCM::DeviceControl::LogoCfg\_t::AnimatedLogo**

False: static logo, true: animated logo.

Definition at line 13821 of file DCM.idl.

**8.72.5.42 SelectionIdList.t DCM::DeviceControl::TC\_DependantQuestion\_t::Answers**

Definition at line 12895 of file DCM.idl.

**8.72.5.43 unsigned short DCM::DeviceControl::ETV\_ApplicationIdent\_t::AppId**

Definition at line 17343 of file DCM.idl.

**8.72.5.44 ApplInstanceId.t DCM::DeviceControl::ETV\_ApplicationIdent\_t::AppInstanceId**

Reserved for future use. Must be empty sequence.

Definition at line 17344 of file DCM.idl.

**8.72.5.45 string DCM::DeviceControl::DescrCAM\_Status\_t::AppVersion**

CAM software version.

Definition at line 28700 of file DCM.idl.

**8.72.5.46 eDestArpStatus DCM::DeviceControl::EndDeviceEntry\_t::ArpStatus**

1) if LAN: ArpStatus of end device 2) if GW: ArpStatus of GW

Definition at line 19036 of file DCM.idl.

**8.72.5.47 eAspectRatio\_t DCM::DeviceControl::VideoSignalInfo\_t::AspectRatio**

Definition at line 30206 of file DCM.idl.

**8.72.5.48 eGPI\_Assert\_t DCM::DeviceControl::GPI\_Settings\_t::Assert**

gpi assert level

Definition at line 31579 of file DCM.idl.

**8.72.5.49 TC\_AudioList\_t DCM::DeviceControl::TC\_AudioCfg\_t::Audio**

Definition at line 13219 of file DCM.idl.

Definition at line 31349 of file DCM.idl.

**8.72.5.74 octet DCM::DeviceControl::IPS\_LanguageSettings\_t::AudioType**

Definition at line 5877 of file DCM.idl.

**8.72.5.75 boolean DCM::DeviceControl::ScriptEntry\_t::AutoRun**

Whether the script will be automatically run on startup.

Definition at line 31758 of file DCM.idl.

**8.72.5.76 unsigned long DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::AVC IDR\_Interval**

AVC IDR\_Interval This field has a 2 fold meaning 1) AVC only: Insert nr of IDR frames per gop.

Between 0 (no IDR, default) to 4, 0 is default. (ignored for transrating + see GopStructure constraints) 2) Closed Gops disable 0 [default] or enable 1. Special values 0 and 1 can only be used when transcoding. Independent of format (Mpeg2 or AVC) or other Gop settings.

The value is ignored and set to 0 in cases it cannot be used.

Definition at line 11025 of file DCM.idl.

**8.72.5.77 unsigned long DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::AVC IDR\_Interval**

AVC IDR\_Interval This field has a 2 fold meaning 1) AVC only: Insert nr of IDR frames per gop.

Between 0 (no IDR, default) to 4, 0 is default. (ignored for transrating + see GopStructure constraints) 2) Closed Gops disable 0 [default] or enable 1. Special values 0 and 1 can only be used when transcoding. Independent of format (Mpeg2 or AVC) or other Gop settings.

The value is ignored and set to 0 in cases it cannot be used.

Definition at line 11195 of file DCM.idl.

**8.72.5.78 unsigned long DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::AVCIDR-Interval**

Not used for the moment.

Definition at line 11360 of file DCM.idl.

**8.72.5.79 unsigned long DCM::DeviceControl::BitRateMeasurement\_t::AvgBitRate**

Definition at line 9782 of file DCM.idl.

**8.72.5.80 octet DCM::DeviceControl::Color\_t::B**

Definition at line 13875 of file DCM.idl.

**8.72.5.81 IPS\_Ref\_t DCM::DeviceControl::DescrCAM\_BackupCfg\_t::BackupCAM**

reference of the backup CAM

Definition at line 28636 of file DCM.idl.

**8.72.5.82 unsigned long DCM::DeviceControl::DescrCAM\_BackupCfg\_t::BackupDelay**

delay to switch from a failing CAM to the backup

Definition at line 28638 of file DCM.idl.

**8.72.5.83 string DCM::DeviceControl::SMX36\_VSEBackup\_t::BackupEncoderIPAddress**

Management IP Address of the Backup encoder.

Definition at line 24342 of file DCM.idl.

**8.72.5.84 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::BackupEncoderIPAddress**

Management IP Address of the Backup encoder.

Definition at line 24354 of file DCM.idl.

**8.72.5.85 IPS\_RefTS\_List\_t DCM::DeviceControl::TS\_BackupParams\_t::BackupInTS\_List**

Definition at line 21742 of file DCM.idl.

**8.72.5.86 IPS\_Ref\_t DCM::DeviceControl::BoardCfg\_t::BackupLocation**

For ASI a backup input can be specified.

Definition at line 1659 of file DCM.idl.

**8.72.5.87 IPS\_Ref\_t DCM::DeviceControl::BoardCfg\_V2\_t::BackupLocation**

For ASI a backup input can be specified.

Definition at line 1701 of file DCM.idl.

**8.72.5.88 IPS\_Service\_t DCM::DeviceControl::BackupService\_t::BackupService**

specifies BoardNr, PortNr, TS and output SID

Definition at line 23049 of file DCM.idl.

**8.72.5.89 BackupSrvTableList.t DCM::DeviceControl::AltSrcBU\_Setting\_t::BackupSrvTableList**

Definition at line 23206 of file DCM.idl.

**8.72.5.90 SMX36\_StatmuxControllerBackupState.e DCM::DeviceControl::SMX36\_Statmux-Controller\_t::BackupState**

Future need to be clarified.

RO VSE backup state.

Definition at line 24122 of file DCM.idl.

**8.72.5.94 SMX\_VSEBackupState.e DCM::DeviceControl::SMX36\_VSE\_V4\_t::BackupState**

RO VSE backup state.

Definition at line 24173 of file DCM.idl.

**8.72.5.95 SMX36\_VSEBackupState.e DCM::DeviceControl::SMX36\_VSEBackup\_t::BackupState**

State of the configured VSE backup.

Definition at line 24345 of file DCM.idl.

**8.72.5.96 SMX36\_VSEBackupState.V2.e DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::Backup-State**

State of the configured VSE backup.

Definition at line 24357 of file DCM.idl.

**8.72.5.97 IPS\_RefTS.t DCM::DeviceControl::DCG\_BackupStream\_t::BackupStream**

Definition at line 31036 of file DCM.idl.

**8.72.5.98 BackupServiceList.t DCM::DeviceControl::BackupSrvTable\_t::BackupSvcList**

specifies list of BoardNr, PortNr, TS and input SID < for backup service

Definition at line 23057 of file DCM.idl.

**8.72.5.99 unsigned long DCM::DeviceControl::DeviceBackupParams\_t::BackupToMainDelay**

[Time](#) in seconds to wait before switching back to main device, range 0-60 s.

Definition at line 21154 of file DCM.idl.

**8.72.5.100 unsigned long DCM::DeviceControl::DeviceBackupParamsV2\_t::BackupToMainDelay**

**Time** in seconds to wait before switching back to main device or reactivating, range 0-60 s.

Definition at line 21174 of file DCM.idl.

**8.72.5.101 unsigned long DCM::DeviceControl::DescrCAM\_BackupCfg\_t::BackupTrigger**

bitmap containing the backup triggers. Bit0: service not descrambled. other bits for future use.

Definition at line 28639 of file DCM.idl.

**8.72.5.102 octet DCM::DeviceControl::MM\_TypeInfo\_V2::BackupTriggerMethod**

Definition at line 22623 of file DCM.idl.

**8.72.5.103 string DCM::DeviceControl::SMX36\_VSEBackup\_t::BackupVideoStreamEncoder-  
Name**

future Name of the video stream on which the statmuxing is running.

Definition at line 24344 of file DCM.idl.

**8.72.5.104 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::BackupVideoStreamEncoder-  
Name**

future Name of the video stream on which the statmuxing is running.

Definition at line 24356 of file DCM.idl.

**8.72.5.105 string DCM::DeviceControl::SMX36\_VSEBackup\_t::BackupVSEName**

VSE Name of the Backup VSE (max length = 20).

Definition at line 24343 of file DCM.idl.

**8.72.5.106 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::BackupVSEName**

VSE Name of the Backup VSE (max length = 20).

Definition at line 24355 of file DCM.idl.

**8.72.5.107 boolean DCM::DeviceControl::TC\_AudioSettings\_t::bAllowAC3**

Transcode AC-3 input. Requires an AC3 extension license.

Definition at line 13133 of file DCM.idl.

**8.72.5.108 eDvbS2\_BandSelection\_t DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t::Band-  
Selection**

auto, forced low, forced high

Definition at line 7435 of file DCM.idl.

**8.72.5.109 unsigned long DCM::DeviceControl::SMX36\_Pool\_t::Bandwidth**

(bps) The bandwidth of the pool (bps). Must be greather than BandwidthOverhead.

Definition at line 23787 of file DCM.idl.

**8.72.5.110 unsigned long DCM::DeviceControl::SMX36\_Pool\_V2\_t::Bandwidth**

(bps) The bandwidth of the pool (bps). Must be greather than BandwidthOverhead.

Definition at line 23807 of file DCM.idl.

**8.72.5.111 unsigned long DCM::DeviceControl::SMX\_Pool\_Calculate\_t::Bandwidth**

(bps) The bandwidth of the pool (bps). Must be greater than BandwidthOverhead.

Definition at line 24269 of file DCM.idl.

**8.72.5.112 unsigned long DCM::DeviceControl::SMX36\_Pool\_t::BandwidthOverhead**

(bps) Overhead/Free-space to the bandwidth used to prevent overshoot on a mux with a small input buffer. must be less that bandwidth

Definition at line 23788 of file DCM.idl.

**8.72.5.113 unsigned long DCM::DeviceControl::SMX36\_Pool\_V2\_t::BandwidthOverhead**

(bps) Overhead/Free-space to the bandwidth used to prevent overshoot on a mux with a small input buffer. must be less that bandwidth

Definition at line 23808 of file DCM.idl.

**8.72.5.114 unsigned long DCM::DeviceControl::SMX\_Pool\_Calculate\_t::BandwidthOverhead**

(bps) Overhead/Free-space to the bandwidth used to prevent overshoot on a mux with a small input buffer. must be less that bandwidth

Definition at line 24270 of file DCM.idl.

**8.72.5.115 unsigned long DCM::DeviceControl::SMX36\_VSE\_t::BandwidthReserve**

(bps) Reserved bandwidth for other tributary's that the video, Used for auto bandwidth calculation on the pool.

Definition at line 24055 of file DCM.idl.

**8.72.5.116 unsigned long DCM::DeviceControl::SMX36\_VSE\_V2\_t::BandwidthReserve**

(bps) Reserved bandwidth for other tributary's that the video, Used for auto bandwidth calculation on the pool.

Definition at line 24074 of file DCM.idl.

**8.72.5.117 unsigned long DCM::DeviceControl::SMX36\_VSE\_V3\_t::BandwidthReserve**

(bps) Reserved bandwidth for other tributary's that the video, Used for auto bandwidth calculation on the pool.

Definition at line 24120 of file DCM.idl.

**8.72.5.118 unsigned long DCM::DeviceControl::SMX36\_VSE\_V4\_t::BandwidthReserve**

(bps) Reserved bandwidth for other tributary's that the video, Used for auto bandwidth calculation on the pool.

Definition at line 24171 of file DCM.idl.

#### **8.72.5.119 BannerCfgID.t DCM::DeviceControl::BannerCfg\_t::BannerCfgID**

unique banner configuration identifier BannerCfgID 0 will be the default banner, it will always exist and is undeletable.

(must also be 0 when adding a new Banner configuration)

Definition at line 13883 of file DCM.idl.

#### **8.72.5.120 BannerCfgID.t DCM::DeviceControl::BannerCfg\_V2\_t::BannerCfgID**

unique banner configuration identifier BannerCfgID 0 will be the default banner, it will always exist and is undeletable.

(must also be 0 when adding a new Banner configuration)

In pixels, upper left hand corner is (x,y) = (0,0).

Definition at line 13956 of file DCM.idl.

**8.72.5.150 unsigned short DCM::DeviceControl::BannerCfg\_t::BannerY\_Position**

In pixels.

Definition at line 13895 of file DCM.idl.

**8.72.5.151 unsigned short DCM::DeviceControl::BannerCfg\_V2\_t::BannerY\_Position**

In pixels.

Definition at line 13957 of file DCM.idl.

**8.72.5.152 boolean DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::bAuxProductInfoExists**

Audio Production Info Exists.

Definition at line 12687 of file DCM.idl.

**8.72.5.153 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bAuxProductionInfoExists**

Aux Production Information Exists, [No (false) by default].

Definition at line 12128 of file DCM.idl.

**8.72.5.154 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bAuxProductionInfoExists**

Aux Production Information Exists, [No (false) by default]. Only used for dual mono.

Definition at line 12288 of file DCM.idl.

**8.72.5.155 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bBandwidthLimitLowPassFilter**

Bandwidth Limit Low Pass Filter, [Off (false) by default].

Definition at line 12109 of file DCM.idl.

**8.72.5.156 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bBandwidthLimitLowPassFilter**

Bandwidth Limit Low Pass Filter, [Off (false) by default].

Definition at line 12257 of file DCM.idl.

**8.72.5.157 boolean DCM::DeviceControl::ASI\_DTF\_t::bBISS1Scrambled**

true means this stream will be scrambled while encapsulating

Definition at line 21990 of file DCM.idl.

**8.72.5.158 boolean DCM::DeviceControl::ASI\_DTF\_Ex\_t::bBISS1Scrambled**

True means this stream will be scrambled while encapsulating.

Definition at line 22008 of file DCM.idl.

**8.72.5.159 boolean DCM::DeviceControl::ASI\_DTF\_t::bBlocked**

true means input not used, false means input passed

Definition at line 21984 of file DCM.idl.

**8.72.5.160 boolean DCM::DeviceControl::ASI\_DTF\_Ex\_t::bBlocked**

True means input not used, false means input passed.

Definition at line 22002 of file DCM.idl.

**8.72.5.161 boolean DCM::DeviceControl::DescrSvcConfig\_t::bCamBuTrigger**

true: when not descrambled, this service

Definition at line 28447 of file DCM.idl.

**8.72.5.162 boolean DCM::DeviceControl::VlanPortSet\_t::bCanBeDeleted**

true if the configured VLAN can be deleted.

It cannot be deleted if it is in use e.g. in IGMP joins RO field

Definition at line 6693 of file DCM.idl.

**8.72.5.163 unsigned long long DCM::DeviceControl::InPort\_DvbS2\_Counters\_t::BCH\_UncorrectedErrors**

Definition at line 7591 of file DCM.idl.

**8.72.5.164 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bChannelAttenuation**

For Future functionality.

Definition at line 12119 of file DCM.idl.

**8.72.5.165 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bChannelAttenuation**

Surround Channel Attenuation, [On(true), Off default], Only used if LFE channel is enabled.

Definition at line 12268 of file DCM.idl.

**8.72.5.166 boolean DCM::DeviceControl::MFPB\_AudioEncodeSettings\_t::bCopyright**

Not used (behaviour is follow input, or true if not available), Copyright, [yes (true) by default].

Definition at line 11777 of file DCM.idl.

**8.72.5.167 boolean DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::bCopyright**

Copyright, yes (true)/no.

Definition at line 12701 of file DCM.idl.

**8.72.5.168 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bDcHighPassFilter**

DC High Pass Filter, [Off (false) by default].

Definition at line 12110 of file DCM.idl.

**8.72.5.169 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bDcHighPassFilter**

DC High Pass Filter, [Off (false) by default].

Definition at line 12258 of file DCM.idl.

**8.72.5.170 boolean DCM::DeviceControl::TC\_LogoDisplay\_t::bDisplay**

True if the logo should be inserted in the video.

Definition at line 14081 of file DCM.idl.

**8.72.5.171 unsigned long DCM::DeviceControl::MessageSetting::BeginDebounceTime**

debouncing time when the alarm begins, switches from non-active to active.

Definition at line 22451 of file DCM.idl.

**8.72.5.172 unsigned long DCM::DeviceControl::NotifData\_t::Behaviour**

0: send buffered, 1: send directly

Definition at line 958 of file DCM.idl.

**8.72.5.173 MsgBehaviour DCM::DeviceControl::MM\_MessageMainPart::Behaviour**

Definition at line 22315 of file DCM.idl.

**8.72.5.174 boolean DCM::DeviceControl::DCG\_JP2K\_params\_t::bEnableAFD**

Definition at line 31311 of file DCM.idl.

**8.72.5.175 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableAFD**

Definition at line 31331 of file DCM.idl.

**8.72.5.176 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableAFD**

Definition at line 31352 of file DCM.idl.

**8.72.5.177 boolean DCM::DeviceControl::DCG\_JP2K\_params\_t::bEnableClosedCaption**

Definition at line 31313 of file DCM.idl.

**8.72.5.178 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableClosedCaption**

Definition at line 31333 of file DCM.idl.

**8.72.5.179 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableClosedCaption**

Definition at line 31354 of file DCM.idl.

**8.72.5.180 boolean DCM::DeviceControl::ExtIpServiceCtrl::bEnabled**

Definition at line 24576 of file DCM.idl.

**8.72.5.181 boolean DCM::DeviceControl::DescrCAM\_BackupCfg\_t::bEnabled**

true: backup enabled, false: backup disabled

Definition at line 28635 of file DCM.idl.

**8.72.5.182 boolean DCM::DeviceControl::DescrCAM\_Cfg\_t::bEnabledSetting**

true: enable CAM. requires a license to enable.

Definition at line 28508 of file DCM.idl.

**8.72.5.183 boolean DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::bEnabledSetting**

true: enable CAM. requires a license to enable.

Definition at line 28534 of file DCM.idl.

**8.72.5.184 boolean DCM::DeviceControl::DescrCAM\_Cfg\_t::bEnabledStatus**

readonly enabled status. Can be different from enabled setting if e.g. after reboot the necessary licenses are missing.

Definition at line 28509 of file DCM.idl.

**8.72.5.185 boolean DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::bEnabledStatus**

readonly enabled status. Can be different from enabled setting if e.g. after reboot the necessary licenses are missing.

Definition at line 28535 of file DCM.idl.

**8.72.5.186 boolean DCM::DeviceControl::DCG\_JP2K\_params\_t::bEnableTeleText**

Definition at line 31312 of file DCM.idl.

**8.72.5.187 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableTeleText**

Definition at line 31332 of file DCM.idl.

**8.72.5.188 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableTeleText**

Definition at line 31353 of file DCM.idl.

**8.72.5.189 boolean DCM::DeviceControl::DCG\_JP2K\_params\_t::bEnableVII**

Definition at line 31310 of file DCM.idl.

**8.72.5.190 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableVII**

Definition at line 31330 of file DCM.idl.

**8.72.5.191 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableVII**

Definition at line 31351 of file DCM.idl.

**8.72.5.192 boolean DCM::DeviceControl::DCG\_JP2K\_params\_t::bEnableVITC**

Definition at line 31309 of file DCM.idl.

**8.72.5.193 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableVITC**

Definition at line 31329 of file DCM.idl.

**8.72.5.194 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableVITC**

Definition at line 31350 of file DCM.idl.

**8.72.5.195 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::bEnableVPS**

Definition at line 31335 of file DCM.idl.

**8.72.5.196 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bEnableVPS**

Definition at line 31356 of file DCM.idl.

**8.72.5.197 boolean DCM::DeviceControl::ASI\_DTF\_t::bEncapsulated**

true means output encapsulated in ghost PID, false means passed

Definition at line 21985 of file DCM.idl.

**8.72.5.198 boolean DCM::DeviceControl::ASI\_DTF\_Ex\_t::bEncapsulated**

True means output encapsulated in ghost PID, false means passed.

Definition at line 22003 of file DCM.idl.

**8.72.5.199 long DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::BER**

(future) Bit Error Rate (errored bits per second).

Definition at line 7121 of file DCM.idl.

**8.72.5.200 unsigned long DCM::DeviceControl::InPort\_DvbS2\_Status\_t::BER**

units of 1E-10. Eg. 1000 represents 1E-7.

Definition at line 7557 of file DCM.idl.

**8.72.5.201 unsigned long DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t::BER\_HighThreshold**

units of 1E-10. Valid values : 1, 10, 100, 1000, 10000, 100000, 1000000, 2000000 (corresponds to 1E-10 1E-9 1E-8 1E-7 1E-6 1E-5 1E-4 2E-4).

Definition at line 7439 of file DCM.idl.

**8.72.5.202 boolean DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t::bError-Concealment**

Error Concealment: [On default]/Off(false)

Definition at line 12554 of file DCM.idl.

**8.72.5.203 boolean DCM::DeviceControl::TC\_LogoDisplay\_t::bFade**

True if the fade in/out time should be respected. False for instant changes.

Definition at line 14082 of file DCM.idl.

**8.72.5.204 boolean DCM::DeviceControl::DCG\_AES\_GeneratorConfig\_t::bGenEnabled**

Definition at line 30806 of file DCM.idl.

**8.72.5.205 boolean DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::bHierarchical**

AVC only. Hierarchical layered structure, default disabled (ignored for transrating + see GopStructure constraints)

Definition at line 11014 of file DCM.idl.

**8.72.5.206 boolean DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::bHierarchical**

AVC only. Hierarchical layered structure, default disabled (ignored for transrating + see GopStructure constraints)

Definition at line 11184 of file DCM.idl.

**8.72.5.207 boolean DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::bHierarchical**

AVC only. Hierarchical layered structure, default disabled.

Definition at line 11357 of file DCM.idl.

**8.72.5.208 boolean DCM::DeviceControl::IPS\_LookupTS\_t::bInput**

Indicates if it is an input or output TS.

Definition at line 2534 of file DCM.idl.

**8.72.5.209 boolean DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t::bIsCenter-Coefficient**

Center Coefficient Present Yes(true)/[No default].

Definition at line 12459 of file DCM.idl.

**8.72.5.210 boolean DCM::DeviceControl::TC\_BannerStatus\_t::bIsEAS\_Banner**

True if the banner is an EAS alert banner.

Definition at line 14050 of file DCM.idl.

**8.72.5.211 boolean DCM::DeviceControl::InPort\_DvbS2\_Status\_t::bIsLocked**

true if locked, false if not locked

Definition at line 7548 of file DCM.idl.

**8.72.5.212 ByteStream DCM::DeviceControl::ASI\_DTF\_t::BISS1ScramblingKey**

scrambling key should be 6 bytes long (scrambling is always even)

Definition at line 21991 of file DCM.idl.

**8.72.5.213 boolean DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t::bIsSurround-Coefficient**

Surround Coefficient Present Yes(true)/[No default].

Definition at line 12461 of file DCM.idl.

**8.72.5.214 unsigned long DCM::DeviceControl::IPS\_OutputTS\_t::Bitrate**

Bitrate of the outgoing TS (in bps).

- ASI port - Output Mode = packet - range: 0.1Mbps..200Mbps.
- ASI port - Output Mode = byte - range: 0.1Mbps..155Mbps.
- GbE port - range: 0.1 Mbps..950 Mbps (per udp port).

**Note**

The sum of all bitrates of TS's that are not paused on a GbE port can't be more than 950 Mbps.

Definition at line 2461 of file DCM.idl.

**8.72.5.215 unsigned long DCM::DeviceControl::IPS\_OutputTS\_V2\_t::Bitrate**

Bitrate of the outgoing TS (in bps).

- ASI port - Output Mode = packet - range: 0.1Mbps..200Mbps.
- ASI port - Output Mode = byte - range: 0.1Mbps..155Mbps.
- GbE port - range: 0.1 Mbps..950 Mbps (per udp port).

**Note**

The sum of all bitrates of TS's that are not paused on a GbE port can't be more than 950 Mbps.

Definition at line 2496 of file DCM.idl.

**8.72.5.216 unsigned long DCM::DeviceControl::ASI\_BW\_LimitData\_t::Bitrate**

Definition at line 6958 of file DCM.idl.

**8.72.5.217 unsigned long DCM::DeviceControl::MFPB\_VideoEncoderTemplate\_t::Bitrate**

Bitrate in bps The meaning of the bitrate depends on the enBitrateMode (.

## See also

[MFPB\\_VideoEncodeSettings\\_t](#)). For CBR : The constant output bit rate. (stuffed if needed) For CappedVBR : The maximum output bit rate. For Statmux : Backup bit rate when the [Statmux](#) controller cannot manage the [FEC Encoder](#) bitrate.

- SD, Mpeg2 range: 0.8-15 Mbps [3 Mbps by default]
- SD, Avc range: 0.3-12.5 Mbps [1.5 Mbps by default]
- HD, Mpeg2 range: 1-45 Mbps [15 Mbps by default]
- HD, Avc range: 0.5-25 Mbps [8 Mbps by default]

Definition at line 10958 of file DCM.idl.

#### 8.72.5.218 unsigned long DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::Bitrate

(kbps) Range: 300 kbps-64 Mbps

Definition at line 11354 of file DCM.idl.

#### 8.72.5.219 unsigned long DCM::DeviceControl::MFPB\_AudioEncodeSettings\_t::Bitrate

Bitrate in bps.

Valid values (in kbps)

- MPEG-1 Layer II:
  - Mono: 32, 48, 56, 64, 80, 96, 112, 128, 160, 192, [Default 96]
  - Stereo + Dual Mono: 64, 96, 112, 128, 160, 192, 224, 256, 320, 384, [Default 192]
- Dolby Digital (AC-3):
  - Mono: 56, 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 [Default 112]. Bitrates 384, 448, 576 and 640 will behave equivalent to 320 from release 10.10 onwards.
  - Stereo: 96, 112, 128, 160, 192, 224, 256, 320, 384, 448, 512, 576, 640 [Default 224].
  - 5.1: 192, 224, 256, 320, 384, 448, 512, 576, 640 [Default 384]
- AAC-LC:
  - Mono: full range [32 kbps to (output sample rate in kHz \* 6 \* 1)], 96 kbps by default
  - Dual Mono: not supported
  - Stereo: full range [32 kbps to (output sample rate in kHz \* 6 \* 2)], 128 kbps by default
  - 5.1: full range [64 kbps to (minimim between 640 kbps and { (25.2 \* output sample rate in Hz + 8000)/1000 } ], 160 kbps by default
- HE AAC v1:
  - Mono: full range [32 kbps to (output sample rate in kHz \* 3 \* 1)], 96 kbps by default
  - Dual Mono: not supported
  - Stereo: full range [32 kbps to (output sample rate in kHz \* 3 \* 2)], 128 kbps by default
  - 5.1: full range [64 kbps to (minimim between 576 kbps and { (12.6 \* output sample rate in Hz + 8000)/1000 } ], 160 kbps by default
- HE AAC v2:

- Mono: not support
- Dual Mono: not supported
- Stereo: full range [32 kbps to (output sample rate in kHz \* 3 \* 2)], 128 kbps by default
- 5.1: not supported
- Dolby Digital Plus:
  - Mono: 56, 64, 72, 80, 88, 96, 104, 112, 120, 128, 144, 160, 176, 192, 200, 208, 224, 232, 240, 248, 256, 272, 288, 304, 320 [Default 112].
  - Stereo + Dual Mono: 96, 104, 112, 120, 128, 144, 160, 176, 192, 200, 208, 224, 232, 240, 248, 256, 272, 288, 304, 320, 336, 352, 368, 384, 400, 448, 512, 576, 640 [Default 224].
  - 5.1: 192, 200, 208, 224, 232, 240, 248, 256, 272, 288, 304, 320, 336, 352, 368, 384, 400, 448, 512, 576, 640 [Default 384]

Note: If the samplerate is set to followinput, it is assumed the incoming samplerate is 48kHz. If the real input is different, the bitrate is set to the closed allowed value and the "Audio Bitrate Altered" alarm is raised. encoding bitrate Unit in [bps],

Definition at line 11770 of file DCM.idl.

#### **8.72.5.220 unsigned long DCM::DeviceControl::TC\_PipSettings\_t::Bitrate**

150 - 400kbps, in bps.

Definition at line 13111 of file DCM.idl.

#### **8.72.5.221 unsigned long DCM::DeviceControl::TC\_AudioSettings\_t::Bitrate**

8 - 128 kbps for HE-AAC, 8 - 576 kbps < for AAC-LC or 8 - 192 kbps for VBR. In bps.

Definition at line 13131 of file DCM.idl.

#### **8.72.5.222 unsigned long DCM::DeviceControl::TR\_GroupSettings\_t::BitRate**

The maximum bitrate that should be applied to the statmux group. This should be lower or equal to the output transport stream bandwidth in case of SingleTS\_xxx group types.

Definition at line 14982 of file DCM.idl.

#### **8.72.5.223 unsigned long DCM::DeviceControl::SMX\_MFP\_GroupSettings\_t::Bitrate**

The maximum bitrate that should be applied to the statmux group. This should be lower or equal to the output transport stream bandwidth in case of SingleTS\_xxx group types. In bits per second. Range: from 1Mbps to 950Mbps. REQUIREMENT: should be less than the bitrate associated with the location.

Definition at line 16162 of file DCM.idl.

#### **8.72.5.224 unsigned long DCM::DeviceControl::ASI\_DTF\_OutputTS\_t::Bitrate**

The outgoing bitrate of the DTF output in bps.

Definition at line 22035 of file DCM.idl.

#### **8.72.5.225 unsigned long DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::Bitrate**

The outgoing bitrate of the DTF output in bps.

Definition at line 22047 of file DCM.idl.

**8.72.5.226 unsigned long DCM::DeviceControl::SMX\_StatMuxPool::Bitrate**

Definition at line 23370 of file DCM.idl.

**8.72.5.227 unsigned long DCM::DeviceControl::SMX\_StatMuxPool\_V2::Bitrate**

Definition at line 23388 of file DCM.idl.

**8.72.5.228 unsigned long DCM::DeviceControl::DCG\_OutputTS\_t::Bitrate**

Bitrate of the outgoing TS (in bps).

in IP Video Gatewae, the only supported bitrates are 270Mbps (SD) (default), 1.5Gbps (HD) or 3Gbps (3G) or Unchecked (0xFFFFFFFF) < in IP audio Gateway, the only supported bitrates are 3.072 Mbps (48 kHz) or Unchecked (0xFFFFFFFF)

Definition at line 30080 of file DCM.idl.

**8.72.5.229 unsigned long DCM::DeviceControl::DCG\_AudioSignalInfo\_t::Bitrate**

Bitrate of audio signal (bit/s), future!

Definition at line 31209 of file DCM.idl.

**8.72.5.230 SMX36\_VSEBitRateMode\_e DCM::DeviceControl::SMX36\_VSE\_t::BitRateMode**

Default rate configuration mode manual or automatic.

Definition at line 24056 of file DCM.idl.

**8.72.5.231 SMX36\_VSEBitRateMode\_e DCM::DeviceControl::SMX36\_VSE\_V2\_t::BitRateMode**

Default rate configuration mode manual or automatic.

Definition at line 24075 of file DCM.idl.

**8.72.5.232 SMX36\_VSEBitRateMode\_e DCM::DeviceControl::SMX36\_VSE\_V3\_t::BitRateMode**

Default rate configuration mode manual or automatic.

Definition at line 24121 of file DCM.idl.

**8.72.5.233 SMX36\_VSEBitRateMode\_e DCM::DeviceControl::SMX36\_VSE\_V4\_t::BitRateMode**

Default rate configuration mode manual or automatic.

Definition at line 24172 of file DCM.idl.

**8.72.5.234 TR\_BitrateLimits\_t DCM::DeviceControl::TR\_ServiceSettings\_t::Bitrates**

The bitrates that apply to the service. Only relevant if the service mode is not passthrough.

Definition at line 15014 of file DCM.idl.

**8.72.5.235 TR\_BitrateLimits\_t DCM::DeviceControl::TR\_ServiceSettings\_V2\_t::Bitrates**

The bitrates that apply to the service. Only relevant if the service mode is not passthrough.

Definition at line 15459 of file DCM.idl.

**8.72.5.236 boolean DCM::DeviceControl::TR\_ServiceSettings\_t::BitratesOnVideo**

Read only flag that indicates if the bitrate limits apply on the whole service or only on the video part.

Definition at line 15015 of file DCM.idl.

**8.72.5.237 boolean DCM::DeviceControl::TR\_ServiceSettings\_V2\_t::BitratesOnVideo**

Read only flag that indicates if the bitrate limits apply on the whole service or only on the video part.

Definition at line 15461 of file DCM.idl.

**8.72.5.238 boolean DCM::DeviceControl::MFPB\_MPEGL2\_AudioSettings\_t::bJointStereoEnable**

Joint Stereo [true (enable) default, false (disable)].

Definition at line 11865 of file DCM.idl.

**8.72.5.239 boolean DCM::DeviceControl::VideoSignalInfo\_t::bJPEG2000**

Definition at line 30204 of file DCM.idl.

**8.72.5.240 boolean DCM::DeviceControl::IGMPv3Group\_t::bLeaveAllowed**

Definition at line 20128 of file DCM.idl.

**8.72.5.241 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bLFE\_LowPassFilter**

For Future functionality,.

Definition at line 12117 of file DCM.idl.

**8.72.5.242 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bLFE\_LowPass-Filter**

LFE Low Pass Filter, [On(true), Off default], Only used if LFE channel is enabled.

Definition at line 12266 of file DCM.idl.

**8.72.5.243 boolean DCM::DeviceControl::MFPB\_AAC\_AudioSettings\_t::bLfeChannelEnable**

LFE Channel Enable default true.

Definition at line 11977 of file DCM.idl.

**8.72.5.244 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bLfeChannelEnable**

LFE Channel Enable, [On (true) default, Off].

Definition at line 12262 of file DCM.idl.

**8.72.5.245 boolean DCM::DeviceControl::MFPB\_AudioStatus\_t::bLfeEnable**

LFE on(true)/off, only for AAC and Dolby.

Definition at line 11615 of file DCM.idl.

**8.72.5.246 boolean DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::bLfeEnable**

LFE on(true)/off, only for AAC and Dolby.

Definition at line 12676 of file DCM.idl.

**8.72.5.247 boolean DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t::bLncBias**

true to enable, false to disable (default)

Definition at line 7489 of file DCM.idl.

**8.72.5.248 boolean DCM::DeviceControl::ServiceBlockCAInfo\_t::blockCAInfo**

Indicates if the CA info needs to be blocked for the service If true, the EIT, SDT and PMT table is updates and ECM components are blocked.

Definition at line 4990 of file DCM.idl.

**8.72.5.249 octet DCM::DeviceControl::DCG\_GeneratorConfig\_t::BlueColorValue**

Definition at line 30741 of file DCM.idl.

**8.72.5.250 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bMainProductInfoExists**

Production Information Exists, [No (false) by default].

Definition at line 12122 of file DCM.idl.

**8.72.5.251 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bMainProductInfo-Exists**

Production Information Exists, [No (false) by default].

Definition at line 12271 of file DCM.idl.

**8.72.5.252 boolean DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::bMainProductInfoExists**

Audio Production Info Exists.

Definition at line 12683 of file DCM.idl.

**8.72.5.253 boolean DCM::DeviceControl::MFPB\_MPEG2FramePicturesCfg\_t::bMPEG2Frame-Picture**

Enable (true) or default disable (false) MPEG-2 Frame Pictures.

Definition at line 10472 of file DCM.idl.

**8.72.5.254 boolean DCM::DeviceControl::NicTeam\_Settings::bNicTeam\_Enabled**

Definition at line 2190 of file DCM.idl.

**8.72.5.255 TC\_BoardCfg\_t DCM::DeviceControl::TC\_PossibleBoardCfg\_t::BoardCfg**

Definition at line 12841 of file DCM.idl.

**8.72.5.256 TC\_BoardCfg\_V2\_t DCM::DeviceControl::TC\_PossibleBoardCfg\_V2\_t::BoardCfg**

Definition at line 12863 of file DCM.idl.

**8.72.5.257 string DCM::DeviceControl::BoardIdentification::BoardName**

Definition at line 1283 of file DCM.idl.

**8.72.5.258 unsigned short DCM::DeviceControl::IPS\_Ref\_t::BoardNr**

The board location the board sits in.

- BoardNr = 0 => Main board
- BoardNr for the I/O boards when looking at the back of the device

|   |   |
|---|---|
| 3 | 4 |
| 1 | 2 |

and for a MkII device with 2-layer boards:

|     |     |
|-----|-----|
| 3/7 | 4/8 |
| 1/5 | 2/6 |

Definition at line 396 of file DCM.idl.

**8.72.5.259 unsigned short DCM::DeviceControl::BoardFeatureUsage\_t::BoardNr**

the slot number.

Definition at line 20709 of file DCM.idl.

**8.72.5.260 unsigned short DCM::DeviceControl::SMX\_PoolRef\_t::BoardNr**

Definition at line 23349 of file DCM.idl.

**8.72.5.261 unsigned long DCM::DCM\_Notifications::Messages::BoardNr**

Definition at line 32236 of file DCM.idl.

**8.72.5.262 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::BoardNr**

Definition at line 32259 of file DCM.idl.

**8.72.5.263 unsigned long DCM::DCM\_Notifications::Output\_TS\_Change::BoardNr**

Definition at line 32273 of file DCM.idl.

**8.72.5.264 unsigned long DCM::DCM\_Notifications::Output\_TS\_Delete::BoardNr**

Definition at line 32287 of file DCM.idl.

**8.72.5.265 unsigned short DCM::DeviceControl::BoardInfo\_t::BoardNumber**

The board location the board sits in.

Board numbering: cfr [IPS\\_Ref\\_t](#)

Definition at line 1565 of file DCM.idl.

**8.72.5.266 unsigned short DCM::DeviceControl::BoardInfo\_V2\_t::BoardNumber**

The board location the board sits in.

Board numbering: cfr [IPS\\_Ref\\_t](#)

Definition at line 1577 of file DCM.idl.

**8.72.5.267 eBoardType DCM::DeviceControl::BoardInfo\_t::BoardType**

The type. See DCM\_Types.idl.

Definition at line 1568 of file DCM.idl.

**8.72.5.268 eBoardType\_V2 DCM::DeviceControl::BoardInfo\_V2\_t::BoardType**

The type. See DCM\_Types.idl.

Definition at line 1580 of file DCM.idl.

**8.72.5.269 eTR\_BoardTypeDelay DCM::DeviceControl::TR\_DelayMode\_t::BoardTypeDelay**

One of the possible predefined board delay settings of the input stream.

Definition at line 14953 of file DCM.idl.

**8.72.5.270 eTR\_BoardTypeDelay DCM::DeviceControl::TR\_DelayMode\_V2\_t::BoardTypeDelay**

One of the possible predefined board delay settings of the input stream.

Definition at line 14963 of file DCM.idl.

**8.72.5.271 VersionInfoList DCM::DeviceControl::BoardIdentification::BoardVersion**

Definition at line 1289 of file DCM.idl.

**8.72.5.272 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::bOnlyScramblingTS**

boolean to notify only TS's with licenses are reported

Definition at line 32258 of file DCM.idl.

**8.72.5.273 boolean DCM::DeviceControl::MFPB\_AudioEncodeSettings\_t::bOriginal**

Not used (behaviour is follow input, or true if not available), Original, [yes (true) by default].

Definition at line 11778 of file DCM.idl.

**8.72.5.274 boolean DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::bOriginal**

Original, yes (true)/no.

Definition at line 12702 of file DCM.idl.

**8.72.5.275 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::bPhaseShift**

For Future functionality.

Definition at line 12118 of file DCM.idl.

**8.72.5.276 boolean DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::bPhaseShift**

Surround 90 deg Phase Shift, [On(true), Off default], Only used if LFE channel is enabled.

Definition at line 12267 of file DCM.idl.

**8.72.5.277 boolean DCM::DeviceControl::IIOP\_SubTable\_t::bPureImport**

indicates if playout is identical to binary data. This parameter is not taken into account in the Delete-ImportedSubTableL call.

Definition at line 8397 of file DCM.idl.

**8.72.5.278 boolean DCM::DeviceControl::ASI\_DTF\_RDCS\_t::bRDCS**

True means stream consists of a Remultiplexer Data and Control Stream.

Definition at line 22017 of file DCM.idl.

**8.72.5.279 boolean DCM::DeviceControl::DescrCAM\_Status\_t::bReady**

initialized and ready for descrambling

Definition at line 28693 of file DCM.idl.

**8.72.5.280 boolean DCM::DeviceControl::ASI\_DTF\_t::bRemoveStuffing**

if true and bEncapsulated is false, then the original stuffing packets are removed

Definition at line 21986 of file DCM.idl.

**8.72.5.281 boolean DCM::DeviceControl::ASI\_DTF\_Ex\_t::bRemoveStuffing**

If true and bEncapsulated is false, then the original stuffing packets are removed.

Definition at line 22004 of file DCM.idl.

**8.72.5.282 boolean DCM::DeviceControl::DescrCAM\_Cfg\_t::bResetOnFailure**

true: reset CAM if descrambling fails on all services False: do not reset. Default value is true.

Definition at line 28512 of file DCM.idl.

**8.72.5.283 boolean DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::bResetOnFailure**

true: reset CAM if descrambling fails on all services False: do not reset. Default value is true.

Definition at line 28538 of file DCM.idl.

**8.72.5.284 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Broadcast**

Broadcast frames.

Definition at line 19857 of file DCM.idl.

**8.72.5.285 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Broadcast**

Broadcast frames.

Definition at line 19877 of file DCM.idl.

**8.72.5.286 boolean DCM::DeviceControl::DCG\_JP2K\_params\_V3\_t::bSDI20BitAudio**

Definition at line 31357 of file DCM.idl.

**8.72.5.287 boolean DCM::DeviceControl::GPS\_Status\_t::bStatus10MHz**

Definition at line 29184 of file DCM.idl.

**8.72.5.288 boolean DCM::DeviceControl::GPS\_Status\_t::bStatus1PPS**

Definition at line 29185 of file DCM.idl.

**8.72.5.289 boolean DCM::DeviceControl::EasConfig\_t::bTextCrawl**

enable participation of the proxy in text crawl generation.

Definition at line 28999 of file DCM.idl.

**8.72.5.290 eServiceBackupMode\_t DCM::DeviceControl::ServiceBackupParams2\_t::BU\_Mode**

Definition at line 23096 of file DCM.idl.

Definition at line 30991 of file DCM.idl.

**8.72.5.292 short DCM::DeviceControl::VersionParts::BuildNumber**

Definition at line 1266 of file DCM.idl.

**8.72.5.293 boolean DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::bUseMainScramblingKey-Index**

True to use the main scrambling key index for all inputs, false to use individual input key indices.

Definition at line 22049 of file DCM.idl.

**8.72.5.294 boolean DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::bUseMainScramblingType**

True to use the main scrambling type for all inputs, false to use individual input types.

Definition at line 22051 of file DCM.idl.

**8.72.5.295 boolean DCM::DeviceControl::TC\_ServiceDataV2\_t::bUseTagAsSvcName**

True (default) use usertag as service name (will be inserted in the SDT). TODO exact behaviour < Default false for main/pip services, default true for multires services.

Definition at line 5609 of file DCM.idl.

**8.72.5.296 unsigned long long DCM::DeviceControl::GbEStatisticsEntry\_t::BytesRx**

Bytes received.

Definition at line 19905 of file DCM.idl.

**8.72.5.297 unsigned long long DCM::DeviceControl::GbEStatisticsEntry\_t::BytesTx**

Bytes transmitted.

Definition at line 19906 of file DCM.idl.

**8.72.5.298 eCaMode DCM::DeviceControl::IPS\_SDT\_Data\_t::CAmodeOut**

RW (Transparent, Not Scrambled, CA Present)

Definition at line 4856 of file DCM.idl.

**8.72.5.299 IPS\_Ref\_t DCM::DeviceControl::DescrCAM\_Cfg\_t::CamRef**

CAM identification.

Definition at line 28507 of file DCM.idl.

**8.72.5.300 IPS\_Ref\_t DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::CamRef**

CAM identification.

Definition at line 28533 of file DCM.idl.

**8.72.5.301 IPS\_Ref\_t DCM::DeviceControl::DescrCAM\_Status\_t::CamRef**

CAM identification.

Definition at line 28692 of file DCM.idl.

**8.72.5.302 string DCM::DeviceControl::DescrCAM\_Status\_t::CamSerialNr**

CAM serial number.

Definition at line 28697 of file DCM.idl.

**8.72.5.303 eCaPmtListManagement\_t DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::CaPmtList-  
Management**

CA PMT list management for updates towards CAM.

Definition at line 28541 of file DCM.idl.

**8.72.5.304 TC\_CaptionInfoList\_t DCM::DeviceControl::MFPB\_ES\_CaptionInfo\_t::CaptionInfoList**

factory default: empty list. In "Add" mode, a non-empty list must be present.

Definition at line 12618 of file DCM.idl.

**8.72.5.305 TC\_CaptionInfoList\_t DCM::DeviceControl::TC\_ES\_CaptionInfo\_t::CaptionInfoList**

factory default: empty list. In "Add" mode, a non-empty list must be present.

Definition at line 13252 of file DCM.idl.

**8.72.5.306 enTC\_CaptionDescriptorMode\_t DCM::DeviceControl::MFPB\_ES\_CaptionInfo\_t::-  
CaptionMode**

Definition at line 12617 of file DCM.idl.

**8.72.5.307 enTC\_CaptionDescriptorMode\_t DCM::DeviceControl::TC\_ES\_CaptionInfo\_t::Caption-  
Mode**

Definition at line 13251 of file DCM.idl.

**8.72.5.308** `octet DCM::DeviceControl::TC_CaptionInfo_t::CaptionSvcNbr`

value in the range 1 to 63. Only interpreted if DigitalCC == 1

Definition at line 10176 of file DCM.idl.

**8.72.5.309** `string DCM::DeviceControl::SMX36_StatmuxController_t::CardName`

RO (CardName) Board of the statmux controller.

Definition at line 23727 of file DCM.idl.

**8.72.5.310** `unsigned long long DCM::DeviceControl::GbEFramesTrans_t::CarrierSense`

No carrier sense.

Definition at line 19897 of file DCM.idl.

**8.72.5.311** `long DCM::DeviceControl::IPS_OutPID_Data2_t::CASystemID`

Only for EMMs: to which CA system does the EMM belong.

Definition at line 2597 of file DCM.idl.

**8.72.5.312** `long DCM::DeviceControl::IPS_InPID_Data_t::CASystemID`

Only for EMMs: to which CA system does the EMM belong.

Definition at line 2606 of file DCM.idl.

**8.72.5.313** `long DCM::DeviceControl::IPS_InPID_Data_V2_t::CASystemID`

Only for EMMs: to which CA system does the EMM belong.

Definition at line 2615 of file DCM.idl.

**8.72.5.314** `long DCM::DeviceControl::IPS_Out_ECMSettings_t::CASystemID`

To which CA system does the ECM belong.

Definition at line 5912 of file DCM.idl.

**8.72.5.315** `long DCM::DeviceControl::IPS_In_ECMSettings_t::CASystemID`

To which CA system does the ECM belong.

Definition at line 5986 of file DCM.idl.

**8.72.5.316** `sequence<string> DCM::DeviceControl::DescrCAM_Status_t::CaSystemId`

supported CA System Ids

Definition at line 28698 of file DCM.idl.

**8.72.5.317** `unsigned short DCM::DeviceControl::BoardDejitterCfg_t::CbrLatency`

The CBR dejitter latency in msec, should be 10 <= latency <= 110.

Definition at line 2962 of file DCM.idl.

Maximum CPB removal delay, in ms. 500 - 1500 ms, and between (service delay - 1306) and (service delay - 452).

Definition at line 13019 of file DCM.idl.

**8.72.5.377 unsigned long DCM::DeviceControl::TC\_VideoSettings\_t::CPB\_Delay**

Maximum CPB removal delay, in ms. 500 - 1500 ms, and between (service delay - 1306) and (service delay - 452).

Definition at line 13068 of file DCM.idl.

**8.72.5.378 unsigned long DCM::DeviceControl::TC\_PipSettings\_t::CPB\_Delay**

Maximum CPB removal delay, in ms. 500 - 1500 ms, and between (service delay - 1306) and (service delay - 452).

Definition at line 13113 of file DCM.idl.

**8.72.5.379 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch0\_1day**

AES channel 0 channel status CRC errors over the last day.

Definition at line 30935 of file DCM.idl.

**8.72.5.380 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch0\_1hour**

AES channel 0 channel status CRC errors over the last hour.

Definition at line 30934 of file DCM.idl.

**8.72.5.381 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch0\_1min**

AES channel 0 channel status CRC errors over the last minute.

Definition at line 30933 of file DCM.idl.

**8.72.5.382 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch1\_1day**

AES channel 0 channel status CRC errors over the last day.

Definition at line 30938 of file DCM.idl.

**8.72.5.383 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch1\_1hour**

AES channel 0 channel status CRC errors over the last hour.

Definition at line 30937 of file DCM.idl.

**8.72.5.384 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::crc\_ch\_status\_ch1\_1min**

AES channel 0 channel status CRC errors over the last minute.

Definition at line 30936 of file DCM.idl.

**8.72.5.385 unsigned long DCM::DeviceControl::InTS\_Statistic\_t::crc\_edh\_1day**

Definition at line 30896 of file DCM.idl.

**8.72.5.386 unsigned long DCM::DeviceControl::InTS\_Statistic\_t::crc\_edh\_1hour**

Definition at line 30895 of file DCM.idl.

**8.72.5.387 unsigned long DCM::DeviceControl::InTS\_Statistic\_t::crc\_edh\_1min**

Definition at line 30894 of file DCM.idl.

**8.72.5.388 unsigned short DCM::DeviceControl::ASI\_SFN\_MKII\_RDCS\_Settings\_t::CRSP - Interval**

Range 10--1000 ms, in steps of 1.

Definition at line 29540 of file DCM.idl.

**8.72.5.389 unsigned long DCM::DeviceControl::BitRateMeasurement\_t::CurBitRate**

Current BitRate: 1 bit/s resolution - max  $2^{32}-1$ .

Definition at line 9781 of file DCM.idl.

**8.72.5.390 MsgSeverity DCM::DeviceControl::MM\_Measurement::CurrentSeverity**

Definition at line 22582 of file DCM.idl.

**8.72.5.391 unsigned short DCM::DeviceControl::ASI\_SFN\_MKII\_RDCS\_Settings\_t::CYTS\_Delay**

Range 5--100 ms, in steps of 1.

Definition at line 29541 of file DCM.idl.

**8.72.5.392 unsigned short DCM::DeviceControl::FEC\_Dec\_Status\_t::D\_ColDepth**

Definition at line 19179 of file DCM.idl.

**8.72.5.393 unsigned short DCM::DeviceControl::FEC\_Enc\_Setting\_t::D\_ColDepth**

default value D = 6

Definition at line 19372 of file DCM.idl.

**8.72.5.394 unsigned short DCM::DeviceControl::FEC\_Enc\_Setting\_V2\_t::D\_ColDepth**

default value D = 6

Definition at line 19393 of file DCM.idl.

**8.72.5.395 unsigned short DCM::DeviceControl::OutTS\_FEC\_Enc\_DefSetting\_t::D\_ColDepth**

note: the name of this member changed from 5.0->5.1 The old name was D\_RowWidth

Definition at line 19420 of file DCM.idl.

**8.72.5.396 ByteStream DCM::DeviceControl::MultipleStringSegment\_t::Data**

String segment in UTF-8 format.

Definition at line 8831 of file DCM.idl.

**8.72.5.397 VCT\_Data.t DCM::DeviceControl::VCT\_SvcInput\_t::Data**

Definition at line 9072 of file DCM.idl.

**8.72.5.398 ByteStream DCM::DeviceControl::AC\_t::Data**

buffer for AC data (a sequence of chars)

Definition at line 27635 of file DCM.idl.

**8.72.5.399 Scte35Data\_DCM\_input\_switch.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_DCM\_input\_switch**

Definition at line 8680 of file DCM.idl.

**8.72.5.400 Scte35Data\_Keyer.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Keyer**

Definition at line 8685 of file DCM.idl.

**8.72.5.401 Scte35Data\_Keyer\_config.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Keyer\_config**

Definition at line 8686 of file DCM.idl.

**8.72.5.402 Scte35Data\_Local\_avail.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Local\_avail**

Definition at line 8683 of file DCM.idl.

**8.72.5.403 Scte35Data\_Logo\_enable.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Logo\_Enable**

Definition at line 8687 of file DCM.idl.

**8.72.5.404 Scte35Data\_Network\_active.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Network\_active**

Definition at line 8682 of file DCM.idl.

**8.72.5.405 Scte35Data\_REDUS\_Switch.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_REDUS\_Switch**

Definition at line 8679 of file DCM.idl.

**8.72.5.406 Scte35Data\_REDUS\_Switch\_Single.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_REDUS\_Switch\_single**

Definition at line 8689 of file DCM.idl.

**8.72.5.407 Scte35Data\_Select\_now.t DCM::DeviceControl::Scte35CommandAndData\_t::Data\_Select\_now**

Definition at line 8681 of file DCM.idl.

**8.72.5.408 unsigned long DCM::DeviceControl::BoardBitrateThreshold::DataBitrateThreshold**

Bitrate threshold for data PIDs - in bps.

Definition at line 22820 of file DCM.idl.

**8.72.5.409 unsigned long DCM::DeviceControl::EMM\_Data\_t::DataID**

Definition at line 2640 of file DCM.idl.

**8.72.5.410 string DCM::DeviceControl::Feature\_t::Date**

Max string length 36.

Definition at line 20540 of file DCM.idl.

**8.72.5.411 unsigned short DCM::DeviceControl::BoardTemperature\_t::DaughterBoard**

The daughter board identification as returned in BoardsConnected.

0: The board itself (main or I/O) 1: Co-processor 2: FEC

Definition at line 1950 of file DCM.idl.

**8.72.5.412 octet DCM::DeviceControl::Time::DayOfMonth**

From 1 to 28, 29, 30 or 31.

Definition at line 460 of file DCM.idl.

**8.72.5.413 enTslInputSwitchMode DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t::DCM\_local\_autoswitch**

Definition at line 8627 of file DCM.idl.

**8.72.5.414 enTslInputSwitchSource DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t::DCM\_local\_input**

Definition at line 8626 of file DCM.idl.

**8.72.5.415 enTslInputSwitchMode DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t::DCM\_radio\_autoswitch**

Definition at line 8625 of file DCM.idl.

**8.72.5.416 enTslInputSwitchSource DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t::DCM\_radio\_input**

Definition at line 8624 of file DCM.idl.

**8.72.5.417 MFPB\_DD\_MetaDecStatusList.t DCM::DeviceControl::MFPB\_ServiceDD\_MetaDecStatus\_t::DD\_MetaDecStatusL**

Definition at line 12723 of file DCM.idl.

**8.72.5.418 MFPB\_DD\_MetaStatus.t DCM::DeviceControl::MFPB\_DD\_MetaDecStatus\_t::DD\_MetaStatus**

Status of the meta data.

Definition at line 12712 of file DCM.idl.

**8.72.5.419 MFPB\_VideoStatus.t DCM::DeviceControl::MFPB\_VideoInformation\_t::DecoderStatus**

Definition at line 10647 of file DCM.idl.

**8.72.5.420 MFPB\_AudioStatus.t DCM::DeviceControl::MFPB\_AudioInformation\_t::DecoderStatus**

Definition at line 11622 of file DCM.idl.

**8.72.5.421 string DCM::DeviceControl::BannerCfg\_V2\_t::DefaultBannerText**

Default banner text, encoded in UTF-8, If the text is empty (contains no characters) and the default banner text must be used, the banner is not displayed.

Definition at line 13977 of file DCM.idl.

**8.72.5.422 string DCM::DeviceControl::IP\_Subnet\_t::DefaultGateway**

Definition at line 2065 of file DCM.idl.

**8.72.5.423 RipSettings.t DCM::DeviceControl::RipBoardSettings::Defaults**

Definition at line 31934 of file DCM.idl.

**8.72.5.424 boolean DCM::DeviceControl::LogoCfg\_t::DefaultShow**

True if the logo should be displayed by default.

Definition at line 13818 of file DCM.idl.

**8.72.5.425 unsigned long DCM::DeviceControl::SMX\_Encoder\_t::DefBitrate**

Definition at line 23465 of file DCM.idl.

**8.72.5.426 unsigned long DCM::DeviceControl::SMX36\_VSEParams\_t::DefBitrate**

(bps) Default bitrate. Range (200.000 -> 60.000.000)

Definition at line 24002 of file DCM.idl.

**8.72.5.427 unsigned long DCM::DeviceControl::SMX36\_VSEParams\_V2\_t::DefBitrate**

(bps) Default bitrate. Range (200.000 -> 60.000.000)

Definition at line 24013 of file DCM.idl.

**8.72.5.428 unsigned long DCM::DeviceControl::SMX36\_VSE\_CalculatedRates\_t::DefBitrate**

RO Calculated Default Rate.

Definition at line 24262 of file DCM.idl.

**8.72.5.429 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Deferred**

Deferred frames.

Definition at line 19894 of file DCM.idl.

**8.72.5.430 unsigned short DCM::DeviceControl::DCG\_InputRTP\_Stream\_t::DejitterBufferSize**

in ms < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)

Definition at line 30008 of file DCM.idl.

**8.72.5.431 unsigned short DCM::DeviceControl::DCG\_InputRTP\_Stream\_V2\_t::DejitterBufferSize**

in ms < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)

Definition at line 30031 of file DCM.idl.

**8.72.5.432 unsigned short DCM::DeviceControl::DCG\_InputRTP\_Stream\_V3\_t::DejitterBufferSize**

in ms < For Audio Gateway: Between 10 and 200 (default 25) < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)

Definition at line 30047 of file DCM.idl.

**8.72.5.433 double DCM::DeviceControl::NTP\_Stats\_t::Delay**

Indicates the roundtrip delay of the peer clock relative to the local clock over the network path between them, in seconds.

Definition at line 699 of file DCM.idl.

**8.72.5.434 unsigned long DCM::DeviceControl::MFPB\_EngineUnitCfg\_t::Delay**

For VideoAudio engines 3000 - 5000 ms (Total delay), in ms. 4000 by default. (For 10.0 and 10.10 with delays < 3000 are set to 3000) < For AudioOnly engine 500 - 1500 ms (Total delay), in ms. 1500 by default.

Definition at line 10382 of file DCM.idl.

**8.72.5.435 unsigned long DCM::DeviceControl::MFPB\_ServiceCfg\_t::Delay**

For 500 - 5000 ms (Total delay), in ms. 4000 by default. The value is only used if engine nr == 0xFFFE, else the engine end to end delay is used.

Definition at line 10425 of file DCM.idl.

**8.72.5.436 unsigned long DCM::DeviceControl::TC\_ServiceCfg\_t::Delay**

1000 - 2800 ms (Total delay), in ms. See [TC\\_VideoSettings\\_t::CPB\\_Delay](#) for additional restrictions.

Definition at line 13174 of file DCM.idl.

**8.72.5.437 unsigned long DCM::DeviceControl::IPS\_OutPID\_Sync\_t::Delay**

The time (in ms) the PIDs should be delayed.

Definition at line 16679 of file DCM.idl.

**8.72.5.438 long DCM::DeviceControl::IPS\_OutPID\_Sync\_V2\_t::Delay**

The time (in ms) the PIDs should be delayed.

Definition at line 16695 of file DCM.idl.

**8.72.5.439 unsigned short DCM::DeviceControl::HitlessMergeSetting\_t::Delay**

in ms fixed point 1 digit (x10), read only

Definition at line 19677 of file DCM.idl.

**8.72.5.440 SMX36\_VSEDelay\_e DCM::DeviceControl::SMX36\_VSEParams\_t::Delay**

VSE Delay.

Definition at line 24006 of file DCM.idl.

**8.72.5.441 SMX36\_VSEDelay\_V2\_e DCM::DeviceControl::SMX36\_VSEParams\_V2\_t::Delay**

VSE Delay.

Definition at line 24017 of file DCM.idl.

**8.72.5.442 unsigned short DCM::DeviceControl::ASI\_SFN\_MKII\_RDCS\_Settings\_t::Delay**

Range 10--100 ms, in steps of 1.

Definition at line 29536 of file DCM.idl.

**8.72.5.443 unsigned long DCM::DeviceControl::End2End\_Delay\_t::Delay**

Definition at line 30216 of file DCM.idl.

**8.72.5.444 unsigned long DCM::DeviceControl::DCG\_HitlessSwitchOverEnable\_t::delay**

Definition at line 31504 of file DCM.idl.

**8.72.5.445 boolean DCM::DeviceControl::TR\_TsDelay\_t::DelayTs**

true = delay the TS / false = don't delay TS

Definition at line 16913 of file DCM.idl.

**8.72.5.446 DescrId\_t DCM::DeviceControl::DescrResource\_t::DescrId**

"port number" of the descrambler.

Definition at line 28029 of file DCM.idl.

**8.72.5.447 string DCM::DeviceControl::SlateData\_t::Description**

Definition at line 10081 of file DCM.idl.

**8.72.5.448 string DCM::DeviceControl::IpServiceDisplayData::Description**

Usage description and features that are related.

Definition at line 24647 of file DCM.idl.

**8.72.5.449   ByteStream DCM::DeviceControl::DescriptorData\_t::DescriptorData**

Definition at line 7832 of file DCM.idl.

**8.72.5.450   ByteStream DCM::DeviceControl::MergedESDescriptorData\_t::DescriptorData**

Definition at line 8032 of file DCM.idl.

**8.72.5.451   eDescriptorType DCM::DeviceControl::DescriptorData\_t::DescriptorType**

Definition at line 7828 of file DCM.idl.

**8.72.5.452   IPS\_UDP\_Socket.t DCM::DeviceControl::SMX\_Encoder\_t::Destination**

Definition at line 23460 of file DCM.idl.

**8.72.5.453   IPS\_UDP\_Socket.t DCM::DeviceControl::Debug\_Gbe\_OutputTS\_t::DestSocket**

Unique destination IP-Address and UDP port combination.

Definition at line 2451 of file DCM.idl.

**8.72.5.454   IPS\_UDP\_Socket.t DCM::DeviceControl::GbeIO\_IP\_Settings\_t::DestSocket**

Unique destination IPv4 or IPv6-Address and UDP port combination.

Definition at line 3309 of file DCM.idl.

**8.72.5.455   unsigned long DCM::DeviceControl::PspipUpdateLocation\_t::Detail**

Definition at line 8467 of file DCM.idl.

**8.72.5.456   string DCM::DeviceControl::MM\_Measurement::Detail**

Definition at line 22581 of file DCM.idl.

**8.72.5.457   boolean DCM::DeviceControl::MM\_MessageMainPart::DetailPresent**

Definition at line 22319 of file DCM.idl.

**8.72.5.458   boolean DCM::DeviceControl::MM\_Measurement::DetailPresent**

Definition at line 22580 of file DCM.idl.

**8.72.5.459   eDvbS2\_RxMode.t DCM::DeviceControl::InPort\_DvbS2\_Status\_t::DetectedMode**

single stream or multi-stream detected.

Definition at line 7564 of file DCM.idl.

**8.72.5.460   string DCM::DeviceControl::SMX36\_StatmuxController\_t::DeviceIPAddress**

RO management IPAddress of the device where the controller is placed.

Definition at line 23725 of file DCM.idl.

**8.72.5.461   eDeviceRole DCM::DeviceControl::DeviceBackupParams\_t::DeviceRole**

Role of this device. Other settings are only valid if the role is not standalone.

Definition at line 21137 of file DCM.idl.

**8.72.5.462 eDeviceRole\_V2 DCM::DeviceControl::DeviceBackupParamsV2\_t::DeviceRole**

Role of this device.

Definition at line 21168 of file DCM.idl.

**8.72.5.463 boolean DCM::DeviceControl::TC\_CaptionInfo\_t::DigitalCC**

0 means line21 caption service

Definition at line 10174 of file DCM.idl.

**8.72.5.464 eGPI\_IO\_t DCM::DeviceControl::GPI\_Settings\_t::Direction**

gpi pin direction

Definition at line 31578 of file DCM.idl.

**8.72.5.465 MFPB\_Dolby\_AudioSettingsList\_t DCM::DeviceControl::MFPB\_DolbyAudioCfg\_t::Dolby-  
\_AudioSettingsList**

Dolby Audio settings per ES.

Definition at line 12149 of file DCM.idl.

**8.72.5.466 MFPB\_Dolby\_AudioSettingsList\_V2\_t DCM::DeviceControl::MFPB\_DolbyAudioCfg\_V2\_t-  
::Dolby\_AudioSettingsList**

Dolby Audio settings per ES.

Definition at line 12320 of file DCM.idl.

**8.72.5.467 unsigned long DCM::DeviceControl::NicTeam\_Settings::DownDelay**

Definition at line 2194 of file DCM.idl.

**8.72.5.468 unsigned long DCM::DeviceControl::DPI\_ChannelSettings3\_t::DpiGpiNr**

Gpi pin used for both, to insertion and to main.

Definition at line 17058 of file DCM.idl.

**8.72.5.469 unsigned long long DCM::DeviceControl::FEC\_Dec\_Statistics\_t::DuplicatePacketCount**

Definition at line 19159 of file DCM.idl.

**8.72.5.470 unsigned long long DCM::DeviceControl::PCTM\_PacketCounters\_t::DuplicatePackets**

Definition at line 20310 of file DCM.idl.

**8.72.5.471 unsigned long DCM::DeviceControl::DPI\_SpliceRequest\_t::Duration**

Duration == 0 means FOREVER or until aborted.

Definition at line 17107 of file DCM.idl.

**8.72.5.472 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_t::DVB\_ScramblingLicense**

Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license false if no license.

Definition at line 4891 of file DCM.idl.

**8.72.5.473 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_V2\_t::DVB\_ScramblingLicense**

Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license; false if no license.

Definition at line 4943 of file DCM.idl.

**8.72.5.474 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_V3\_t::DVB\_ScramblingLicense**

Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license; false if no license.

Definition at line 4974 of file DCM.idl.

**8.72.5.475 eDvbS2\_Mode\_t DCM::DeviceControl::InPort\_DvbS2\_Status\_t::DVBS\_Mode**

Detected mode: DVB-S or DVB-S2.

Definition at line 7558 of file DCM.idl.

**8.72.5.476 unsigned long DCM::DeviceControl::EasConfig\_t::EasId**

Identifies the EAS proxy.

Definition at line 28985 of file DCM.idl.

**8.72.5.477 boolean DCM::DeviceControl::TC\_CaptionInfo\_t::EasyReader**

1 means tailored for easy reading

Definition at line 10177 of file DCM.idl.

**8.72.5.478 unsigned short DCM::DeviceControl::ETV\_Primary\_Settings\_t::EBIF\_Pid**

Only applicable if primary mode is eUseDummyETV\_Pids.

Definition at line 17155 of file DCM.idl.

**8.72.5.479 unsigned short DCM::DeviceControl::ETV\_Primary\_Settings\_V2\_t::EBIF\_Pid**

Only applicable if primary mode is eUseDummyETV\_Pids.

Definition at line 17268 of file DCM.idl.

**8.72.5.480 enChannelBandwidth DCM::DeviceControl::MIP\_Settings\_t::eChannelBandwidth**

Definition at line 29176 of file DCM.idl.

**8.72.5.481 string DCM::DeviceControl::IPS\_Out\_ECMSettings\_t::ECM\_Info**

Additional info for ECM (AC, ...)

Definition at line 5913 of file DCM.idl.

**8.72.5.482 IPS\_Out\_ECMSettingsTree\_t** DCM::DeviceControl::IPS\_Out\_ServiceComponents\_t::ECM\_Info

Definition at line 5938 of file DCM.idl.

**8.72.5.483 IPS\_Out\_ECMSettingsTree\_t** DCM::DeviceControl::IPS\_Out\_ServiceComponents\_V2\_t::ECM\_Info

Definition at line 5967 of file DCM.idl.

**8.72.5.484 IPS\_In\_ECMSettingsTree\_t** DCM::DeviceControl::IPS\_In\_ServiceComponents\_t::ECM\_Info

Definition at line 6018 of file DCM.idl.

**8.72.5.485 IPS\_Out\_PIDSettings\_t** DCM::DeviceControl::IPS\_Out\_ECMSettings\_t::ECM\_PID

Setting of an individual ECM PID.

Definition at line 5914 of file DCM.idl.

**8.72.5.486 unsigned short** DCM::DeviceControl::IPS\_In\_ECMSettings\_t::ECM\_PID

Setting of an individual ECM PID.

Definition at line 5987 of file DCM.idl.

**8.72.5.487 boolean** DCM::DeviceControl::Service\_AutoPassRules::ECM\_RuleDisabled

read-only; true = ECM rule is disabled and PassDeleteECMs cannot be changed by the user; false = PassDeleteECMs can be configured by the user;

Definition at line 2894 of file DCM.idl.

**8.72.5.488 enCodeRate** DCM::DeviceControl::MIP\_Settings\_t::eCodeRate

Definition at line 29173 of file DCM.idl.

**8.72.5.489 unsigned short** DCM::DeviceControl::SMX36\_Encoder\_t::EcoderVSECapacity

RO The Maximum number of VSE the current encoder can handle.

Definition at line 23938 of file DCM.idl.

**8.72.5.490 enConstellation** DCM::DeviceControl::MIP\_Settings\_t::eConstellation

Definition at line 29171 of file DCM.idl.

**8.72.5.491 eDescrType\_t** DCM::DeviceControl::DescrResource\_t::eDescrType

type of descrambler

Definition at line 28031 of file DCM.idl.

**8.72.5.492 enDVB\_H\_MPE\_FEC** DCM::DeviceControl::MIP\_Settings\_t::eDVB\_H\_MPE\_FEC

Definition at line 29179 of file DCM.idl.

**8.72.5.493 enDVB\_H\_Timeslicing** DCM::DeviceControl::MIP\_Settings\_t::eDVB\_H\_Timeslicing

Definition at line 29178 of file DCM.idl.

**8.72.5.494 eDescrEnabledMode** DCM::DeviceControl::DescrSvcConfig\_t::eEnabled

identifies if and how descrambling must be done

Definition at line 28446 of file DCM.idl.

**8.72.5.495 enFFT\_Mode** DCM::DeviceControl::MIP\_Settings\_t::eFFT\_Mode

Definition at line 29175 of file DCM.idl.

**8.72.5.496 enGPS\_ClockImpedance** DCM::DeviceControl::GPS\_Settings\_t::eGPS\_10MHz\_Impedance

Definition at line 29090 of file DCM.idl.

**8.72.5.497 enGPS\_10MHz\_Invert** DCM::DeviceControl::GPS\_Settings\_t::eGPS\_10MHz\_Invert

Definition at line 29094 of file DCM.idl.

**8.72.5.498 enGPS\_1PPS\_Edge** DCM::DeviceControl::GPS\_Settings\_t::eGPS\_1PPS\_Edge

Definition at line 29093 of file DCM.idl.

**8.72.5.499 enGPS\_ClockImpedance** DCM::DeviceControl::GPS\_Settings\_t::eGPS\_1PPS\_Impedance

Definition at line 29089 of file DCM.idl.

**8.72.5.500 enGPS\_1PPS\_SliceLevel** DCM::DeviceControl::GPS\_Settings\_t::eGPS\_1PPS\_SliceLevel

Definition at line 29091 of file DCM.idl.

**8.72.5.501 enGuardInterval** DCM::DeviceControl::MIP\_Settings\_t::eGuardInterval

Definition at line 29174 of file DCM.idl.

**8.72.5.502 enHierarchyAndInterleaving** DCM::DeviceControl::MIP\_Settings\_t::eHierarchyAnd-Interleaving

Definition at line 29172 of file DCM.idl.

**8.72.5.503 unsigned short** DCM::DeviceControl::ETV\_Primary\_Settings\_t::EISS\_Pid

Only applicable if primary mode is eUseDummyETV\_Pids.

Definition at line 17154 of file DCM.idl.

**8.72.5.504 unsigned short** DCM::DeviceControl::ETV\_Primary\_Settings\_V2\_t::EISS\_Pid

Only applicable if primary mode is eUseDummyETV\_Pids.

Definition at line 17267 of file DCM.idl.

**8.72.5.505 eEitPresentFollow** DCM::DeviceControl::IPS\_SDT\_Data\_t::EITpfOut

RW (Transparent, Sch. PF Present, Sch. PF Not Present)

Definition at line 4854 of file DCM.idl.

**8.72.5.506 boolean DCM::DeviceControl::IPS\_SDT\_Data\_t::EITpresFollowIn**

RO provides EIT\_present\_following flag of input (Present = 1)

Definition at line 4853 of file DCM.idl.

**8.72.5.507 boolean DCM::DeviceControl::IPS\_SDT\_Data\_t::EITscheduleIn**

RO provides EIT\_schedule\_flag of input (Present = 1)

Definition at line 4851 of file DCM.idl.

**8.72.5.508 eEitSchedule DCM::DeviceControl::IPS\_SDT\_Data\_t::EITschOut**

RW (Transparent, Schedule Present, Schedule Not Present)

Definition at line 4852 of file DCM.idl.

**8.72.5.509 InEMM\_Ref\_t DCM::DeviceControl::EMM\_Data\_t::EMM\_Ref**

Definition at line 2641 of file DCM.idl.

**8.72.5.510 boolean DCM::DeviceControl::TS\_AutoPassRulesDisableFlags::EMM\_RuleDisabled**

read-only; true = the EMM rule is disabled by system; false = the EMM rule can be configured by the user;

Definition at line 2872 of file DCM.idl.

**8.72.5.511 enMFPB\_Downmix\_ToStereo DCM::DeviceControl::MFPB\_AudioDecodeExtraAAC-Settings\_t::en5\_1ToStereo**

Select channels to keep when converting to stereo. Allowed values are LTRT and [LORO default].

Definition at line 12458 of file DCM.idl.

**8.72.5.512 enMFPB\_Downmix\_ToStereo DCM::DeviceControl::MFPB\_AudioDecodeExtraDolby-Settings\_t::en5\_1ToStereo**

Select channels to keep when converting to stereo. Allowed values are LTRT, [LORO default] and auto.

Definition at line 12547 of file DCM.idl.

**8.72.5.513 boolean DCM::DeviceControl::BoardDejitterCfg\_t::EnableCbrLatency**

If true, CBR dejittered streams will use the CBR latency.

Definition at line 2963 of file DCM.idl.

**8.72.5.514 boolean DCM::DeviceControl::BoardCfg\_t::Enabled**

Whether this port is enabled or disabled.

Definition at line 1663 of file DCM.idl.

**8.72.5.515 boolean DCM::DeviceControl::ASI\_BW\_LimitData\_t::Enabled**

Definition at line 6957 of file DCM.idl.

**8.72.5.516 boolean DCM::DeviceControl::RestoreOption::Enabled**

Should the option be used.

Definition at line 21479 of file DCM.idl.

**8.72.5.517 boolean DCM::DeviceControl::RestoreOption\_V2::Enabled**

Should the option be used.

Definition at line 21691 of file DCM.idl.

**8.72.5.518 boolean DCM::DeviceControl::MessageSetting::Enabled**

enable/disabling of individual messages.

Definition at line 22447 of file DCM.idl.

**8.72.5.519 boolean DCM::DeviceControl::SMX36\_VSE\_V2\_t::Enabled**

Is the VSE to be enabled in the statmux Pool.

Definition at line 24078 of file DCM.idl.

**8.72.5.520 boolean DCM::DeviceControl::SMX36\_VSE\_V3\_t::Enabled**

Is the VSE to be enabled in the statmux Pool.

Definition at line 24123 of file DCM.idl.

**8.72.5.521 boolean DCM::DeviceControl::SMX36\_VSE\_V4\_t::Enabled**

Is the VSE to be enabled in the statmux Pool.

Definition at line 24174 of file DCM.idl.

**8.72.5.522 boolean DCM::DeviceControl::SMX36\_VSE\_CalculatedRates\_t::Enabled**

RO If the VSE is enabled or disabled in the Poollist.

Definition at line 24263 of file DCM.idl.

**8.72.5.523 boolean DCM::DeviceControl::GPI\_Settings\_t::Enabled**

gpi contact enabled if true

Definition at line 31580 of file DCM.idl.

**8.72.5.524 boolean DCM::DeviceControl::RipSettings\_t::Enabled**

Whether RIP is enabled by default for new TS's.

Definition at line 31926 of file DCM.idl.

**8.72.5.525 boolean DCM::DeviceControl::BoardCfg\_V2\_t::EnabledStatus**

Whether the status of this port is enabled or disabled.

Definition at line 1706 of file DCM.idl.

**8.72.5.526 boolean DCM::DeviceControl::ETV\_EissFilter\_t::EnableFilter**

if true, the filter is enabled

Definition at line 17354 of file DCM.idl.

**8.72.5.527 enMFPB\_AAC\_AdvancedEncodingTools DCM::DeviceControl::MFPB\_AAC\_AudioSettings\_t::enAdvancedEncodingTools**

enAdvancedEncodingTools is constrained by:

- MFPB\_AudioEncodeSettings\_t.enMFPB\_AudioFormat\_t (LC\_AAC, HE\_AACv1, HE\_AACv2)
- MFPB\_AAC\_AudioSettings\_t.enMFPB\_AAC\_TransportPacketMode\_t (MPEG2\_ADTS, MPEG4\_ADTS, MPEG4\_LATM, MPEG4\_LATM\_EXPL)

Constraints when setting:

- For HE\_AACv1, enAdvancedEncodingTools must be eMFPB\_AET\_SBR
- For future use: For HE\_AACv2, enAdvancedEncodingTools must eMFPB\_AET\_SBR\_PS
- For LC\_AAC + MPEG2\_ADTS, enAdvancedEncodingTools cannot be eMFPB\_AET\_PNS\_TNS
- For LC\_AAC + MPEG2\_ADTS, enAdvancedEncodingTools cannot be eMFPB\_AET\_SBR
- For LC\_AAC + MPEG2\_ADTS, enAdvancedEncodingTools cannot be eMFPB\_AET\_SBR\_PS

Defaults:

- LC\_AAC [eMFPB\_AET\_None by default]
- HE\_AACv1 [eMFPB\_AET\_SBR by default]
- For future use: HE\_AACv2 [eMFPB\_AET\_SBR\_PS by default] Advanced encoding tools

Definition at line 11974 of file DCM.idl.

**8.72.5.528 enMFPB\_Afd DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::enAfd**

Active format descriptor value. The value set in manual mode or fallback value for auto enAfdMode. (enMFPB\_Afd\_16\_9\_sp\_4\_3 by default)

Definition at line 11201 of file DCM.idl.

**8.72.5.529 enMFPB\_AfdMode DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::enAfdMode**

Active format descriptor mode, only used for HD->SD downconversion. Manual | auto (Default)

Definition at line 11200 of file DCM.idl.

**8.72.5.530 enTC\_AllowedBanner\_t DCM::DeviceControl::TC\_BannerSettings\_t::enAllowedBanner**

Definition at line 14041 of file DCM.idl.

**8.72.5.531 enMFPB\_AspectRatioSig DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::enAspectRatioSig**

Aspect Ratio Signaling value. The value set in manual mode or fallback value for auto enAspectRatioSig-Mode. (4:3 SD default, 16:9 HD default)

Definition at line 11199 of file DCM.idl.

**8.72.5.532 enMFPB\_AspectRatioSigMode DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::enAspectRatioSigMode**

Aspect Ratio Signaling mode. Auto (fixed for HD->HD, SD->SD), manual (fixed for HD->SD)

Definition at line 11198 of file DCM.idl.

**8.72.5.533 enTC\_EncodingMode\_t DCM::DeviceControl::TC\_AudioSettings\_t::enAudioEncodingMode**

Remark: This setting is ignored, the audio output is always CBR.

Definition at line 13134 of file DCM.idl.

**8.72.5.534 enMFPB\_AudioFormat\_t DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::enAudioFormat**

Dolby Digital or Dolby Digital Plus.

Definition at line 12673 of file DCM.idl.

**8.72.5.535 enMFPB\_Dolby\_RoomType DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::enAuxRoomType**

Aux Room Type, [SmallRoom by default].

Definition at line 12129 of file DCM.idl.

**8.72.5.536 enMFPB\_Dolby\_RoomType DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::enAuxRoomType**

Aux Room Type, [SmallRoom by default]. Only used for dual mono.

Definition at line 12289 of file DCM.idl.

**8.72.5.537 enMFPB\_Dolby\_RoomType DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::enAuxRoomType**

Room Type.

Definition at line 12690 of file DCM.idl.

**8.72.5.538 enTC\_BannerPriority\_t DCM::DeviceControl::TC\_BannerSettings\_t::enBannerPriority**

Definition at line 14042 of file DCM.idl.

**8.72.5.539 enBannerStopType\_t DCM::DeviceControl::BannerCfg\_V2\_t::enBannerStopType**

Behaviour when the banner is stopped. From version release 9.0.

Definition at line 13981 of file DCM.idl.

**8.72.5.540 enMFPB\_BitrateMode DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::enBitrateMode**

Choose between CBR, Capped VBR and Statmux.

Definition at line 11009 of file DCM.idl.

**8.72.5.541 enMFPB\_BitrateMode DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::en-BitrateMode**

Choose between CBR, Capped VBR and Statmux.

Definition at line 11179 of file DCM.idl.

**8.72.5.542 enMFPB\_BitrateMode DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::en-BitrateMode**

Choose between CBR and Capped VBR.

Definition at line 11347 of file DCM.idl.

**8.72.5.543 enMFPB\_Dolby\_BitStreamMode DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::en-BitStreamMode**

Bit stream mode, [CompleteMain by default].

Definition at line 12106 of file DCM.idl.

**8.72.5.544 enMFPB\_Dolby\_BitStreamMode DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::enBitStreamMode**

Bit stream mode, [CompleteMain by default].

Definition at line 12254 of file DCM.idl.

**8.72.5.545 enMFPB\_Dolby\_BitStreamMode DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::enBit-StreamMode**

Bit Stream Mode.

Definition at line 12681 of file DCM.idl.

Definition at line 29993 of file DCM.idl.

**8.72.5.705 string DCM::DeviceControl::SMX36\_VSE\_V2\_t::expectedVideoRateMode**

RO Set when the VSE is placed in a Pool a alarm is raised if actual divigates from expected.

Definition at line 24079 of file DCM.idl.

**8.72.5.706 string DCM::DeviceControl::SMX36\_VSE\_V3\_t::expectedVideoRateMode**

RO Set when the VSE is placed in a Pool a alarm is raised if actual divigates from expected.

Definition at line 24124 of file DCM.idl.

**8.72.5.707 SMX36\_Video\_Rate\_Mode\_e DCM::DeviceControl::SMX36\_VSE\_V4\_t::expectedVideoRateMode**

new in V11.00 URC:

- It is now possible to enforce the expected video rate mode from the VSE, by setting the enforced video rate mode to something else than ignore.
- Before, the expected video rate mode was default set to "Statmux" when preconfiguring VSE. For on-line VSEs the video rate mode of the VSE at the moment of joining the pool was set as the expected video rate mode.
- If the enforced video rate mode is set to ignore, the previous behavior is kept.
- When the expected video rate mode is different compared with actual video rate mode as detected on the on-line VSE, then an Alarm is triggered. RO Set when the VSE is placed in a Pool. If enforceVideoRateMode is not Ignore, then this will be the saem as the enforceVideoRateMode.

Definition at line 24186 of file DCM.idl.

**8.72.5.708 Time DCM::DeviceControl::TempLicenseData::ExpirationDate**

time of expiration of the temporary licenses in the local timezone

readonly flag indicating if default priority bit settings are used

Definition at line 29377 of file DCM.idl.

**8.72.5.743 boolean DCM::DeviceControl::DCG\_OutputTS\_t::FollowUserNameOfInputStream**

Definition at line 30094 of file DCM.idl.

**8.72.5.744 FontCfglD.t DCM::DeviceControl::FontCfg\_t::FontCfgID**

unique font configuration identifier (must be 0 when adding a new font configuration)

Definition at line 13784 of file DCM.idl.

**8.72.5.745 string DCM::DeviceControl::FontCfg\_t::FontCfgName**

font configuration name, maximum 64 characters

Definition at line 13787 of file DCM.idl.

**8.72.5.746 unsigned long DCM::DeviceControl::FontCfg\_t::FontProperty**

Read only Bitmap.

- Bit 0: TRUE if the font is in use.

Definition at line 13791 of file DCM.idl.

**8.72.5.747 boolean DCM::DeviceControl::VCT\_Forcing\_t::ForceChannelNumber**

true = use filled in channel number, false = use input channel number

Definition at line 9101 of file DCM.idl.

**8.72.5.748 boolean DCM::DeviceControl::TableGenerationData\_t::ForcedOutputPid**

Indicates if the output pid should be forced or not (=0)

Definition at line 6032 of file DCM.idl.

**8.72.5.749 boolean DCM::DeviceControl::TableGenerationData\_V2\_t::ForcedOutputPid**

Indicates if the output pid should be forced or not (=0)

Definition at line 6054 of file DCM.idl.

**8.72.5.750 boolean DCM::DeviceControl::VCT\_Forcing\_t::ForceLongName**

true = use filled in long name, false = use input long name

Definition at line 9100 of file DCM.idl.

**8.72.5.751 boolean DCM::DeviceControl::VCT\_Forcing\_t::ForceSourceId**

true = use filled in source id, false = use input source id

Definition at line 9102 of file DCM.idl.

**8.72.5.752 boolean DCM::DeviceControl::VCT\_Forcing\_t::ForceUserName**

true = use service user name as short name, false = use input short name

Definition at line 9099 of file DCM.idl.

**8.72.5.753 VCT\_Forcing\_t DCM::DeviceControl::VCT\_SvcSetting\_t::Forcing**

Definition at line 9111 of file DCM.idl.

**8.72.5.754 boolean DCM::DeviceControl::ETTV\_ContentSetting\_t::Forcing**

Definition at line 9644 of file DCM.idl.

**8.72.5.755 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Fragment**

Fragments.

Definition at line 19873 of file DCM.idl.

**8.72.5.756 unsigned long DCM::DeviceControl::MFPB\_MultiResABR\_t::FragmentLength**

Fragment length in seconds (range: 1 to 60s)

Definition at line 11054 of file DCM.idl.

**8.72.5.757 boolean DCM::DeviceControl::MFPB\_MultiResABR\_t::FragmentsEnabled**

Enable ABR syncing via Fragments.

Definition at line 11052 of file DCM.idl.

**8.72.5.758 eFrameBuildUp\_t DCM::DeviceControl::VideoSignalInfo\_t::FrameBuildUp**

Definition at line 30208 of file DCM.idl.

**8.72.5.759 unsigned short DCM::DeviceControl::SlateData\_t::FrameRate**

Definition at line 10084 of file DCM.idl.

**8.72.5.760 eFrameRate\_t DCM::DeviceControl::VideoSignalInfo\_t::FrameRate**

Definition at line 30200 of file DCM.idl.

**8.72.5.761 unsigned long DCM::DeviceControl::MFPB\_VideoStatus\_t::FrameRate1000**

Framerate for 1000 seconds (fps\*1000 eg, 29.97 Hz becomes 29970)

Definition at line 10638 of file DCM.idl.

**8.72.5.762 FrameRateCodes DCM::DeviceControl::SMX\_Encoder\_t::FrameRateCode**

Definition at line 23467 of file DCM.idl.

**8.72.5.763 eTR\_FrameRateDelay DCM::DeviceControl::TR\_DelayMode\_t::FrameRateDelay**

One of the possible predefined frame rate delay settings.

Definition at line 14952 of file DCM.idl.

**8.72.5.764 eTR\_FrameRateDelay DCM::DeviceControl::TR\_DelayMode\_V2\_t::FrameRateDelay**

One of the possible predefined frame rate delay settings.

Definition at line 14962 of file DCM.idl.

**8.72.5.765 boolean DCM::DeviceControl::IPS\_SDT\_Data\_t::FreeCAmode**

RO provides free\_CA\_mode of input (Scrambled = 1)

Definition at line 4855 of file DCM.idl.

**8.72.5.766 unsigned long DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t::Frequency**

In KHz. Valid range is 47000 to 885000, multiples of 125.

Definition at line 7081 of file DCM.idl.

**8.72.5.767 octet DCM::DeviceControl::Color\_t::G**

Definition at line 13874 of file DCM.idl.

**8.72.5.768 string DCM::DeviceControl::IP\_Route\_t::Gateway**

Definition at line 18705 of file DCM.idl.

**8.72.5.769 string DCM::DeviceControl::IP\_Route\_t\_V2::Gateway**

Definition at line 18717 of file DCM.idl.

**8.72.5.770 eGbePortType\_t DCM::DeviceControl::DCG\_OutputRTP\_V2\_Stream\_t::GbePortType**

Definition at line 30125 of file DCM.idl.

**8.72.5.771 boolean DCM::DeviceControl::DCG\_GeneratorConfig\_t::GenEnabled**

Definition at line 30735 of file DCM.idl.

**8.72.5.772 ePIDPassingStatus DCM::DeviceControl::TableGenerationData\_t::GenerationMode**

Specifies what should happen wiht the output table.

Definition at line 6033 of file DCM.idl.

**8.72.5.773 ePIDPassingStatus\_V2 DCM::DeviceControl::TableGenerationData\_V2\_t::Generation-Mode**

Specifies what should happen wiht the output table.

Definition at line 6055 of file DCM.idl.

**8.72.5.774 Time DCM::DeviceControl::MM\_MessageMainPart::GenerationTime**

generation time of the message - see [Time](#) above

Definition at line 22314 of file DCM.idl.

**8.72.5.775 IPS\_RefTS\_t DCM::DeviceControl::DCG\_GeneratorConfig\_t::GeneratorRef**

Definition at line 30734 of file DCM.idl.

**8.72.5.776 IPS\_RefTS\_t DCM::DeviceControl::DCG\_AES\_GeneratorConfig\_t::GeneratorRef**

Definition at line 30805 of file DCM.idl.

**8.72.5.777 unsigned long DCM::DeviceControl::DCG\_GeneratorConfig\_t::GenPropertyBits**

Future use.

Definition at line 30738 of file DCM.idl.

**8.72.5.778 unsigned long DCM::DeviceControl::TC\_PipSettings\_t::GOP\_Length**

Lenght of the GOP. 1 - 30 frames.

Definition at line 13112 of file DCM.idl.

**8.72.5.779 unsigned short DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::GopBPictures**

Amount of B pictures. Range 0 to 5, default 2. 0 means IPP. (ignored for transrating + see GopStructure constraints)

Definition at line 11015 of file DCM.idl.

**8.72.5.780 unsigned short DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::GopBPictures**

Amount of B pictures. Range 0 to 5, default 2. 0 means IPP. (ignored for transrating + see GopStructure constraints)

Definition at line 11185 of file DCM.idl.

**8.72.5.781 unsigned short DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::GopBPictures**

Amount of B pictures. Range 0 to 5, default 2. 0 means IPP.

Definition at line 11358 of file DCM.idl.

**8.72.5.782 unsigned short DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::GopSize**

Number of I coded frames per gop. Range: 1..600, default 15, 1 means no B or P frames (ignored for transrating + GopStructure constraints)

Definition at line 11016 of file DCM.idl.

**8.72.5.783 unsigned short DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::GopSize**

Number of I coded frames per gop. Range: 1..600, default 15, 1 means no B or P frames (ignored for transrating + GopStructure constraints)

Definition at line 11186 of file DCM.idl.

**8.72.5.784 unsigned short DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::GopSize**

Number of I coded frames per gop. Range: 1..600, default 15, 1 means no B or P frames.

Definition at line 11359 of file DCM.idl.

**8.72.5.785 octet DCM::DeviceControl::DCG\_GeneratorConfig\_t::GreenColorValue**

Definition at line 30740 of file DCM.idl.

**8.72.5.786 unsigned long DCM::DeviceControl::TRBitRateSample\_t::GroupID**

Definition at line 9849 of file DCM.idl.

**8.72.5.787 unsigned long DCM::DeviceControl::TR\_BitRateMeasurement\_t::GroupID**

Definition at line 9859 of file DCM.idl.

**8.72.5.788 TR\_GroupID\_t DCM::DeviceControl::TR\_GroupSettings\_t::GroupID**

The group reference, it should be a valid reference. It cannot be changed anymore after creation.

Definition at line 14978 of file DCM.idl.

**8.72.5.789 TR\_GroupID\_t DCM::DeviceControl::TR\_TSAdd\_t::GroupID**

The group reference. The group should already exist.

Definition at line 14997 of file DCM.idl.

**8.72.5.790 TR\_GroupID\_t DCM::DeviceControl::TR\_GroupServiceSettings\_t::GroupID**

Definition at line 15024 of file DCM.idl.

**8.72.5.791 TR\_GroupID\_t DCM::DeviceControl::TR\_GroupServiceSettings\_V2\_t::GroupID**

Definition at line 15472 of file DCM.idl.

**8.72.5.792 RMX\_GroupID\_t DCM::DeviceControl::RMX\_GroupSettings\_t::GroupID**

ID of the group: read-only, ignored during creation.

Definition at line 15636 of file DCM.idl.

**8.72.5.793 RMX\_GroupID\_t DCM::DeviceControl::RMX\_GroupSvc\_t::GroupID**

The group reference. The group should already exist.

Definition at line 15736 of file DCM.idl.

**8.72.5.794 unsigned long DCM::DeviceControl::SMX\_MFP\_Group\_TSSettings\_t::GroupID**

The group reference. The group should already exist.

Definition at line 16193 of file DCM.idl.

**8.72.5.795 unsigned long DCM::DeviceControl::SMX\_MFP\_Group\_TSs\_t::GroupID**

The group reference. The group should already exist.

Definition at line 16202 of file DCM.idl.

**8.72.5.796 unsigned long DCM::DeviceControl::SMX\_MFP\_Group\_SvcSettings\_t::GroupID**

The group reference. The group should already exist.

Definition at line 16273 of file DCM.idl.

**8.72.5.797 unsigned long DCM::DeviceControl::SMX\_MFP\_Group\_SvcSettings\_V2\_t::GroupID**

The group reference. The group should already exist.

Definition at line 16284 of file DCM.idl.

**8.72.5.798 unsigned long DCM::DeviceControl::SMX\_MFP\_Group\_Svc\_t::GroupID**

The group reference. The group should already exist.

Definition at line 16295 of file DCM.idl.

**8.72.5.799 string DCM::DeviceControl::TR\_GroupSettings\_t::GroupName**

The group name, the same name may be used multiple times.

Definition at line 14979 of file DCM.idl.

**8.72.5.800 eTR\_GroupType DCM::DeviceControl::TR\_GroupSettings\_t::GroupType**

The type of group. It cannot be changed anymore after creation.

Definition at line 14980 of file DCM.idl.

**8.72.5.801 boolean DCM::DeviceControl::SMX36\_VSEParams\_V2\_t::GuaranteeMinBitrate**

if true, enforce minimum bitrate (by stuffing if needed), default: True

Definition at line 24019 of file DCM.idl.

**8.72.5.802 SMX36.PoolGuaranteeMinRateMode\_e DCM::DeviceControl::SMX36\_Pool\_t::GuaranteeMinRateMode**

Controls whether VSE's releases unused videobandwidth below the min rate to the rest of the pool when the video complexity is low.

Definition at line 23794 of file DCM.idl.

**8.72.5.803 unsigned long DCM::DeviceControl::TC\_VideoEncodeSettings\_t::HD\_Bitrate**

5.0 - 12.0Mbps, in bps.

Definition at line 13017 of file DCM.idl.

**8.72.5.804 unsigned long DCM::DeviceControl::TC\_VideoSettings\_t::HD\_Bitrate**

5.0 - 12.0Mbps, in bps.

Definition at line 13065 of file DCM.idl.

**8.72.5.805 boolean DCM::DeviceControl::TC\_VideoDecode\_t::HD\_Service**

If set both SD and HD services can be transcoded.

SD services will use the SD\_Bitrate defined by the encoding settings, HD services will use the HD\_Bitrate defined by the encoding settings.

Definition at line 13033 of file DCM.idl.

**8.72.5.806 boolean DCM::DeviceControl::TC\_VideoSettings\_t::HD\_Service**

If set both SD and HD services can be transcoded. SD services will use SD\_Bitrate, HD services will use HD\_Bitrate.

Definition at line 13066 of file DCM.idl.

**8.72.5.807 unsigned long DCM::DeviceControl::TC\_BoardCfg\_t::HD\_Slots**

Definition at line 12833 of file DCM.idl.

**8.72.5.808 unsigned long DCM::DeviceControl::TC\_BoardCfg\_V2\_t::HD\_Slots**

Definition at line 12851 of file DCM.idl.

**8.72.5.809 MFPB\_VideoEncoderTemplate\_t DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t::HdOutputEncoderTemplate**

Template for HD output. Not used in SD mode.

Definition at line 11011 of file DCM.idl.

**8.72.5.810 MFPB\_VideoEncoderTemplate\_t DCM::DeviceControl::MFPB\_VideoEncodeSettingsV2\_t::HdOutputEncoderTemplate**

Template for HD output. Not used in SD mode.

Definition at line 11181 of file DCM.idl.

**8.72.5.811 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_t::HDSERVICE**

Read/Write: Holds true if service is High definition service false for Standard definition service.

Definition at line 4889 of file DCM.idl.

**8.72.5.812 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_V2\_t::HDSERVICE**

Read/Write: Holds true if service is High definition service false for Standard definition service.

Definition at line 4941 of file DCM.idl.

**8.72.5.813 boolean DCM::DeviceControl::IPS\_ServiceData\_Out\_V3\_t::HDSERVICE**

Read/Write: Holds true if service is High definition service false for Standard definition service.

Definition at line 4972 of file DCM.idl.

**8.72.5.814 unsigned short DCM::DeviceControl::MFPB\_VideoResolution\_t::Height**

Definition at line 10602 of file DCM.idl.

**8.72.5.815 unsigned short DCM::DeviceControl::TC\_VideoResolution\_t::Height**

Definition at line 13076 of file DCM.idl.

Definition at line 10083 of file DCM.idl.

**8.72.5.817 eTriBool DCM::DeviceControl::VCT\_Data\_t::Hidden**

true: channel is inactive, should not be listed

Definition at line 9060 of file DCM.idl.

**8.72.5.818 eTriBool DCM::DeviceControl::VCT\_Data\_t::HideGuide**

(only valid when hidden flag is true) true: program may not be listed in program guide

Definition at line 9063 of file DCM.idl.

**8.72.5.819 unsigned long DCM::DeviceControl::TS\_BackupParams\_t::HighToLowPriorityDelay**

time in seconds to wait before switching to backup

Definition at line 21744 of file DCM.idl.

**8.72.5.820 unsigned long DCM::DeviceControl::ServiceBackupParams\_t::HighToLowPriority-Delay**

time in seconds to wait before switching to backup

Definition at line 23043 of file DCM.idl.

**8.72.5.821 unsigned long DCM::DeviceControl::ServiceBackupParams2\_t::HighToLowPriority-Delay**

Definition at line 23097 of file DCM.idl.

**8.72.5.822 unsigned long DCM::DeviceControl::DCG\_StreamBackupParams\_t::HighToLow-PriorityDelay**

Definition at line 30992 of file DCM.idl.

**8.72.5.823 HitlessMergeSetting\_t DCM::DeviceControl::InTS\_HitlessMergeSetting\_t::HitlessMerge-Setting**

Definition at line 19684 of file DCM.idl.

**8.72.5.824 enDCG\_HitlessSwitchOverMode\_t DCM::DeviceControl::DCG\_HitlessSwitchOverEnable-\_t::hitlessSwitchOverMode**

Definition at line 31502 of file DCM.idl.

**8.72.5.825 unsigned short DCM::DeviceControl::RipBoardSettings::HoldTimeout**

[Time](#) to keep advertising alarm metric after TS Loss cleared or TS removed/stopped streaming. Range[1, 1800], default 180.

Definition at line 31936 of file DCM.idl.

**8.72.5.826 unsigned short DCM::DeviceControl::GbeIO\_IP\_Settings\_t::HopLimit\_TTL**

for future use - default value 64

Definition at line 3312 of file DCM.idl.

**8.72.5.827 octet DCM::DeviceControl::Time::Hour**

From 0 to 23.

Definition at line 462 of file DCM.idl.

**8.72.5.828 unsigned long DCM::DeviceControl::Debug\_Gbe\_InputTS\_t::HwIndex**

The hardware index for a stream.

Definition at line 2388 of file DCM.idl.

**8.72.5.829 unsigned long DCM::DeviceControl::Debug\_Gbe\_OutputTS\_t::HwIndex**

The hardware index for a stream.

Definition at line 2452 of file DCM.idl.

**8.72.5.830 unsigned long DCM::DeviceControl::Debug\_DvbS2\_InputTS\_t::HwIndex**

The hardware index for a stream.

Definition at line 7767 of file DCM.idl.

**8.72.5.831 string DCM::DeviceControl::DescrCAM\_Status\_t::HwVersion**

CAM hardware version.

Definition at line 28699 of file DCM.idl.

**8.72.5.832 string DCM::DeviceControl::UniqueDeviceId\_t::Id**

The ID of the info field.

Definition at line 1295 of file DCM.idl.

**8.72.5.833 long DCM::DeviceControl::DescriptorData\_t::ID**

-1 means invalid ID

Definition at line 7829 of file DCM.idl.

**8.72.5.834 long DCM::DeviceControl::MergedESDescriptorData\_t::ID**

Definition at line 8029 of file DCM.idl.

**8.72.5.835 octet DCM::DeviceControl::PsipUpdateLocation\_t::Id**

Definition at line 8466 of file DCM.idl.

Definition at line 10080 of file DCM.idl.

**8.72.5.837 unsigned long DCM::DeviceControl::TR\_GroupID\_t::ID**

Group ID in the range [2, 501], group ID 1 may not be used.

Definition at line 14859 of file DCM.idl.

**8.72.5.838 unsigned long DCM::DeviceControl::SMX\_MFP\_GroupSettings\_t::ID**

ID of the group: read-only, ignored during creation. Only used in Set/Get/Delete commands.

Definition at line 16153 of file DCM.idl.

**8.72.5.839 long DCM::DeviceControl::SMX36\_StatmuxController\_t::Id**

RO Statmux Controller Id.

Definition at line 23724 of file DCM.idl.

**8.72.5.840 long DCM::DeviceControl::SMX36\_Pool\_t::Id**

RO Pool Id.

Definition at line 23782 of file DCM.idl.

**8.72.5.841 long DCM::DeviceControl::SMX36\_Pool\_V2\_t::Id**

RO Pool Id.

Definition at line 23802 of file DCM.idl.

**8.72.5.842 long DCM::DeviceControl::SMX36\_Encoder\_t::Id**

Encoder Id.

Definition at line 23935 of file DCM.idl.

**8.72.5.843 long DCM::DeviceControl::SMX36\_VSE\_t::Id**

RO Unique ID of the video service element.

Definition at line 24047 of file DCM.idl.

**8.72.5.844 long DCM::DeviceControl::SMX36\_VSE\_V2\_t::Id**

RO Unique ID of the video service element.

Definition at line 24066 of file DCM.idl.

**8.72.5.845 long DCM::DeviceControl::SMX36\_VSE\_V3\_t::Id**

RO Unique ID of the video service element, as linked with the VSE after creation.

Definition at line 24113 of file DCM.idl.

**8.72.5.846 long DCM::DeviceControl::SMX36\_VSE\_V4\_t::Id**

RO Unique ID of the video service element, as linked with the VSE after creation.

Definition at line 24164 of file DCM.idl.

**8.72.5.847 long DCM::DeviceControl::SMX36\_VSE\_CalculatedRates\_t::Id**

RO Unique ID of the VSE.

Definition at line 24261 of file DCM.idl.

**8.72.5.848 long DCM::DeviceControl::SMX\_Pool\_Calculate\_t::Id**

RO Pool Id.

Definition at line 24268 of file DCM.idl.

**8.72.5.849 MM\_ID\_Category DCM::DeviceControl::MM\_TypeInfo::ID\_Cat**

Definition at line 22605 of file DCM.idl.

**8.72.5.850 MM\_ID\_Category DCM::DeviceControl::MM\_TypeInfo\_V2::ID\_Cat**

Definition at line 22622 of file DCM.idl.

**8.72.5.851 unsigned long DCM::DeviceControl::DCG\_AES\_GeneratorConfig\_t::iGenPropertyBits**

Future use.

Definition at line 30810 of file DCM.idl.

**8.72.5.852 eFECIncrScheme DCM::DeviceControl::InTS\_FEC\_Dec\_DefRuleSetting\_t::IncrScheme**

Definition at line 19148 of file DCM.idl.

**8.72.5.853 eFECIncrScheme DCM::DeviceControl::OutTS\_FEC\_Enc\_DefSetting\_t::IncrScheme**

default value is increment UDP (eUDP\_OFFSET) (fixed for 4.0 release)

Definition at line 19414 of file DCM.idl.

**8.72.5.854 unsigned short DCM::DeviceControl::ASI\_DTF\_ScramblingKey\_t::Index**

Index in the array of keys, should be <1024.

Definition at line 22079 of file DCM.idl.

**8.72.5.855 string DCM::DeviceControl::UniqueDeviceId\_t::Info**

Unique device identifier info field.

Definition at line 1296 of file DCM.idl.

**8.72.5.856 TableKeys\_t DCM::DeviceControl::TableGenerationData\_t::InKeys**

Keys to locate the desired input table.

Definition at line 6038 of file DCM.idl.

**8.72.5.857 TableKeys\_t DCM::DeviceControl::TableGenerationData\_V2\_t::InKeys**

Keys to locate the desired input table.

Definition at line 6060 of file DCM.idl.

**8.72.5.858 unsigned short DCM::DeviceControl::TableGenerationData\_t::InPid**

Pid on which the specified input table should be found.

Set to INVALID\_PID\_VALUE for an imported table.

Definition at line 6039 of file DCM.idl.

**8.72.5.859 unsigned short DCM::DeviceControl::TableGenerationData\_V2\_t::InPid**

Pid on which the specified input table should be found.

Set to INVALID\_PID\_VALUE for an imported table.

Definition at line 6061 of file DCM.idl.

**8.72.5.860 VCT\_Data\_t DCM::DeviceControl::VCT\_SvcData\_t::Input**

Definition at line 9123 of file DCM.idl.

**8.72.5.861 MultipleString\_t DCM::DeviceControl::ETTV\_ContentData\_t::Input**

Definition at line 9656 of file DCM.idl.

**8.72.5.862 enMFPB\_AudioStatusChannelConfiguration\_t DCM::DeviceControl::MFPB\_AudioStatus\_t::InputChannelConfig**

Definition at line 11613 of file DCM.idl.

**8.72.5.863 enMFPB\_AudioChannelConfiguration\_t DCM::DeviceControl::MFPB\_AudioDecode\_t::InputChannelConfig**

Input channel configuration.

Allowed values are Stereo and 5.1. Use stereo when mono, dual mono or stereo is expected at the input.

Definition at line 11663 of file DCM.idl.

**8.72.5.864 enMFPB\_AudioFormat\_t DCM::DeviceControl::MFPB\_AudioDecode\_t::InputFormat**

Format of the input.

Definition at line 11657 of file DCM.idl.

**8.72.5.865 long DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t::InputLevel**

Output parameter indicating signal level in dBm. If the input level is out of range the InputLevel is set to the minimum or maximum long value, e.g. 2147483647 in case of above measurement range or -2147483648 in case of below measurement range.

Definition at line 7083 of file DCM.idl.

**8.72.5.866 long DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::InputLevel**

Signal level in dBm. If the input level is out of range the InputLevel is set to the minimum or maximum long value, e.g. 2147483647 in case of above measurement range or -2147483648 in case of below measurement range.

Definition at line 7117 of file DCM.idl.

**8.72.5.867 long DCM::DeviceControl::InPort\_DvbS2\_Status\_t::InputLevel**

-80..-20 dBm. If the input level is out of range the InputLevel is set to the minimum or maximum long value, e.g. 2147483647 in case of above measurement range or -2147483648 in case of below measurement range.

Definition at line 7549 of file DCM.idl.

**8.72.5.868 unsigned short DCM::DeviceControl::IPS\_OutPID\_Data\_t::InputPID**

Definition at line 2614 of file DCM.idl.

**8.72.5.872 IPS\_RefPid\_t DCM::DeviceControl::CompPidES\_t::InputPid**

Value of the PID at the input TS.

Definition at line 2826 of file DCM.idl.

**8.72.5.873 IPS\_RefPid\_t DCM::DeviceControl::CompPidES\_V2\_t::InputPid**

Value of the PID at the input TS. < If in the pid ref, board and port are set to 0xFFFF and input TS ref is 0xFFFFFFFF, < this means it is a dummy output elementary stream. A reference for this < ES will be created in the outgoing PMT. On the output TS, the input pid value < will be used as unique identifier and preferred output pid for the dummy ES.

Definition at line 2836 of file DCM.idl.

**8.72.5.874 unsigned short DCM::DeviceControl::SI\_AutoPassRules\_t::InputPid**

PID from which to auto-pass.

Definition at line 2904 of file DCM.idl.

**8.72.5.875 IPS\_RefPid\_t DCM::DeviceControl::PcrSetting\_t::InputPidRef**

If Board, Port and TS Reference are invalid (0xFFFFFFFF), < this means it's a "dummy" PCR. Input PID value is used as < preferred output PID value. When set to INVALID\_PID\_VALUE < this means that the PCR will be removed.

Definition at line 5977 of file DCM.idl.

**8.72.5.876 IPS\_Ref\_t DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t::InputPortRef**

Reference of the input port.

Definition at line 7079 of file DCM.idl.

**8.72.5.877 IPS\_Ref\_t DCM::DeviceControl::InPort\_8VSB\_Config\_t::InputPortRef**

Reference of the 8VSB input port.

Definition at line 7100 of file DCM.idl.

**8.72.5.878 IPS\_Ref\_t DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::InputPortRef**

Reference of the 8VSB input port.

Definition at line 7116 of file DCM.idl.

**8.72.5.879 IPS\_RefTS.t DCM::DeviceControl::TS\_AutoPassRules::InputRef**

The input TS to monitor/subscribe to.

Definition at line 2855 of file DCM.idl.

**8.72.5.880 IPS\_RefTS.t DCM::DeviceControl::SI\_AutoPassRules\_t::InputRef**

TS from which to auto-pass.

Definition at line 2903 of file DCM.idl.

**8.72.5.881 IPS\_RefTS.t DCM::DeviceControl::ASI\_DTF\_t::InputRef**

The reference to the DTF input stream.

Definition at line 21983 of file DCM.idl.

**8.72.5.882 IPS\_RefTS.t DCM::DeviceControl::ASI\_DTF\_Ex\_t::InputRef**

The reference to the DTF input stream.

Definition at line 22001 of file DCM.idl.

**8.72.5.883 IPS\_RefTS.t DCM::DeviceControl::ASI\_DTF\_RDSCS\_t::InputRef**

The reference to the DTF input stream.

Definition at line 22016 of file DCM.idl.

**8.72.5.884 boolean DCM::DeviceControl::IPS\_SDT\_Data\_t::InputSDTPresent**

RO flag.

Definition at line 4849 of file DCM.idl.

**8.72.5.885 ASI\_DTF\_RDSCS\_List.t DCM::DeviceControl::ASI\_DTF\_OutputTS\_RDSCS\_t::Input-Settings**

List of DTF RDSCS input settings.

Definition at line 22060 of file DCM.idl.

**8.72.5.886 ServiceId.t DCM::DeviceControl::IPS\_Service\_In\_t::InputSID**

Definition at line 4743 of file DCM.idl.

**8.72.5.887 unsigned long DCM::DeviceControl::ServiceES\_t::InputSID**

Definition at line 5867 of file DCM.idl.

**8.72.5.888 unsigned long DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::InputSID**

Input Service ID. (Not used : always 0 now)

Definition at line 5886 of file DCM.idl.

**8.72.5.889 unsigned long DCM::DeviceControl::IPS\_In\_ServiceComponents\_t::InputSID**

Definition at line 6015 of file DCM.idl.

**8.72.5.890 eEsTypeStandard DCM::DeviceControl::IPS\_InputTS\_t::InputStandard**

Indicates how different PID (ES) types must be interpreted.

Definition at line 2371 of file DCM.idl.

**8.72.5.891 eEsTypeStandard DCM::DeviceControl::IPS\_ChangeInputTS\_t::InputStandard**

Indicates how different PID (ES) types must be interpreted.

Definition at line 2398 of file DCM.idl.

**8.72.5.892 IPS\_RefTS.t DCM::DeviceControl::IPS\_OutputTS\_LT\_t::InRef**

The location of the InputTS (Board, Port and Ref).

Definition at line 4459 of file DCM.idl.

**8.72.5.893 IPS\_RefTS.t DCM::DeviceControl::IPS\_OutputTS\_LT\_V2\_t::InRef**

The location of the InputTS (Board, Port and Ref).

Definition at line 4476 of file DCM.idl.

**8.72.5.894 IPS\_RefTS.t DCM::DeviceControl::TableGenerationData\_t::InRefTs**

Slot, port and index of the input TS where the table to be used can be found.

Should be set to invalid when the input table has to be retrieved from local disk.

Definition at line 6034 of file DCM.idl.

**8.72.5.895 IPS\_RefTS.t DCM::DeviceControl::TableGenerationData\_V2\_t::InRefTs**

Slot, port and index of the input TS where the table to be used can be found.

Should be set to invalid when the input table has to be retrieved from local disk.

Definition at line 6056 of file DCM.idl.

**8.72.5.896 elnserCATDescriptors DCM::DeviceControl::OutTS\_InsertCATDescriptors\_t::InsertCATDescriptors**

Definition at line 2929 of file DCM.idl.

**8.72.5.897 unsigned long DCM::DeviceControl::DPI\_ChannelSettings\_t::InsertionChannel**

SID.

Definition at line 17025 of file DCM.idl.

**8.72.5.898 unsigned long DCM::DeviceControl::DPI\_ChannelSettings2\_t::InsertionChannel**

SID.

Definition at line 17039 of file DCM.idl.

**8.72.5.899 unsigned long DCM::DeviceControl::DPI\_ChannelSettings3\_t::InsertionChannel**

SID.

Definition at line 17053 of file DCM.idl.

**8.72.5.900    AlternateSrcId\_t DCM::DeviceControl::AlternateSourceSettings\_t::InsertionSourceId**

The ID of the insertion source (0xFFFFFFFF if none is present) (read-only)

Definition at line 17735 of file DCM.idl.

**8.72.5.901    IPS\_RefTS\_t DCM::DeviceControl::DPI\_ChannelSettings\_t::InsertionTs**

Definition at line 17024 of file DCM.idl.

**8.72.5.902    IPS\_RefTS\_t DCM::DeviceControl::DPI\_ChannelSettings2\_t::InsertionTs**

Definition at line 17038 of file DCM.idl.

**8.72.5.903    IPS\_RefTS\_t DCM::DeviceControl::DPI\_ChannelSettings3\_t::InsertionTs**

Definition at line 17052 of file DCM.idl.

**8.72.5.904    eFeatureInstallState DCM::DeviceControl::Feature\_t::Install**

Definition at line 20534 of file DCM.idl.

**8.72.5.905    long DCM::DeviceControl::MM\_MessageTypeErrorInterval::Interval**

Interval in ms. Value must be between 0-46600 (incl boundaries). NB: MAX\_PID\_ERROR\_TIMEOUT = 45000.

Definition at line 22849 of file DCM.idl.

**8.72.5.906    eIOInterfaceType DCM::DeviceControl::BoardCfg\_t::IOInterfaceType**

The type of the port (ASI/GbE).

Definition at line 1661 of file DCM.idl.

**8.72.5.907    eIOInterfaceType\_V2 DCM::DeviceControl::BoardCfg\_V2\_t::IOInterfaceType**

The type of the port (ASI/GbE).

Definition at line 1703 of file DCM.idl.

**8.72.5.908    eIOType DCM::DeviceControl::BoardCfg\_t::IOType**

The direction of the port.

Definition at line 1662 of file DCM.idl.

**8.72.5.909    eIOType\_V2 DCM::DeviceControl::BoardCfg\_V2\_t::IOType**

The direction of the port.

Definition at line 1704 of file DCM.idl.

**8.72.5.910    string DCM::DeviceControl::NTP\_Info\_t::IP**

Definition at line 706 of file DCM.idl.

**8.72.5.911    string DCM::DeviceControl::IPS\_UDP\_Socket\_t::IP**

Definition at line 2312 of file DCM.idl.

**8.72.5.912** string DCM::DeviceControl::IP\_Subnet\_t::IP\_Addr

Definition at line 2063 of file DCM.idl.

**8.72.5.913** string DCM::DeviceControl::ArpEntry\_t::IP\_Addr

e.g. "10.11.52.101"

Definition at line 18601 of file DCM.idl.

**8.72.5.914** string DCM::DeviceControl::IP\_Route\_t::IP\_Addr

use "0.0.0.0" to create a default route

Definition at line 18703 of file DCM.idl.

**8.72.5.915** string DCM::DeviceControl::IP\_Route\_t\_V2::IP\_Addr

Definition at line 18715 of file DCM.idl.

**8.72.5.916** string DCM::DeviceControl::EndDeviceEntry\_t::IP\_Addr

Definition at line 19034 of file DCM.idl.

**8.72.5.917** string DCM::DeviceControl::EasConfig\_t::IP\_Addr

IP address in case of multicast.

Definition at line 29001 of file DCM.idl.

**8.72.5.918** string DCM::DeviceControl::MIP\_SyncTargetSettings\_t::IP\_Address

Definition at line 21885 of file DCM.idl.

**8.72.5.919** string DCM::DeviceControl::TrapDestination::IPAddress

Definition at line 1114 of file DCM.idl.

**8.72.5.920** string DCM::DeviceControl::IpCfg\_t::IpAddress

Definition at line 6668 of file DCM.idl.

**8.72.5.921** boolean DCM::DeviceControl::IPI\_Settings\_t::IPI\_Enabled

Definition at line 29376 of file DCM.idl.

**8.72.5.922** IPI.Settings.t DCM::DeviceControl::InTS\_IPI\_Settings\_t::IPI\_Settings

Definition at line 29385 of file DCM.idl.

**8.72.5.923** unsigned long DCM::DeviceControl::IpServiceDisplayData::IpSvcProperty

Bitmap:

- bit 0: blocked (firewall, configuration, )

Definition at line 24648 of file DCM.idl.

**8.72.5.924 unsigned long DCM::DeviceControl::GbeIO\_IP\_Settings\_t::IPv6\_FlowLabel**

for future use - default value 0

Definition at line 3313 of file DCM.idl.

**8.72.5.925 DvbS2\_Isi\_t DCM::DeviceControl::DvbS2\_LookupTS\_t::Isi**

Input stream identifier.

Definition at line 7651 of file DCM.idl.

**8.72.5.926 DvbS2\_Isi\_t DCM::DeviceControl::DvbS2\_InputTS\_t::Isi**

Input stream identifier (INVALID\_ISI in case of single stream).

Definition at line 7737 of file DCM.idl.

**8.72.5.927 DvbS2\_Isi\_t DCM::DeviceControl::Debug\_DvbS2\_InputTS\_t::Isi**

Input stream identifier (INVALID\_ISI in case of single stream).

Definition at line 7766 of file DCM.idl.

**8.72.5.928 boolean DCM::DeviceControl::SlateData\_t::IsInUse**

Definition at line 10085 of file DCM.idl.

**8.72.5.929 boolean DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t::IsLocked**

Output parameter indicating whether tuner is locked to channel.

Definition at line 7082 of file DCM.idl.

**8.72.5.930 boolean DCM::DeviceControl::TC\_PossibleBoardCfg\_t::isPossible**

Is it possible to apply this board configuration.

Definition at line 12840 of file DCM.idl.

**8.72.5.931 boolean DCM::DeviceControl::TC\_PossibleBoardCfg\_V2\_t::isPossible**

Is it possible to apply this board configuration.

Definition at line 12862 of file DCM.idl.

**8.72.5.932 boolean DCM::DeviceControl::DCG\_Possible3GBoardCfg\_t::isPossible**

Is it possible to apply this board configuration.

Definition at line 31118 of file DCM.idl.

**8.72.5.933 IpCfgList\_t DCM::DeviceControl::VlanPortSet\_t::ItfAddresses**

Configured addresses of the vlan interfaces.

sequence length must match number of ports in the physical portset, i.e. 2 for now.

Definition at line 6688 of file DCM.idl.

**8.72.5.934 string DCM::DeviceControl::IpServiceDisplayData::ItfName**

Interface of listening port, or 'all'.

Definition at line 24640 of file DCM.idl.

**8.72.5.935 double DCM::DeviceControl::NTP\_Stats\_t::Jitter**

The estimated time error of the system clock measured as an exponential average of RMS time differences.

Definition at line 701 of file DCM.idl.

**8.72.5.936 TableKeysExt\_t DCM::DeviceControl::DescriptorRuleSet\_t::Key**

Definition at line 7845 of file DCM.idl.

**8.72.5.937 string DCM::DeviceControl::Feature\_t::Key**

Max string length 36.

Definition at line 20541 of file DCM.idl.

**8.72.5.938 unsigned long DCM::DeviceControl::Scte35Data\_Keyer\_t::Keyer\_id**

Definition at line 8652 of file DCM.idl.

Definition at line 8836 of file DCM.idl.

**8.72.5.949 string DCM::DeviceControl::TC\_CaptionInfo\_t::LanguageCode**

ISO\_639\_language\_code. Fixed length of 3 bytes !

Definition at line 10173 of file DCM.idl.

**8.72.5.950 unsigned long DCM::DeviceControl::DPI\_ShortChannelStatus\_t::LastError**

Definition at line 17015 of file DCM.idl.

**8.72.5.951 long DCM::DeviceControl::NTP\_Stats\_t::LastPoll**

[Time](#) that elapsed since last poll attempt.

Definition at line 696 of file DCM.idl.

**8.72.5.952 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::LateCollision**

Late collisions.

Definition at line 19895 of file DCM.idl.

**8.72.5.953 unsigned short DCM::DeviceControl::FEC\_Dec\_Status\_t::Latency**

in ms fixed point 1 digit (x10)

Definition at line 19184 of file DCM.idl.

**8.72.5.954 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lAudioLevel**

Reserved for future.

Definition at line 12677 of file DCM.idl.

**8.72.5.955 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lAuxDialnorm**

Dialnorm (dB) times 10.

Definition at line 12688 of file DCM.idl.

**8.72.5.956 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::lAuxDialogNormalizationLevel**

Aux Dialog Normalization Level, Unit in [dB] - Range [-31 <-> -1] - [-23 by default].

Definition at line 12131 of file DCM.idl.

**8.72.5.957 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::lAuxDialogNormalizationLevel**

Aux Dialog Normalization Level, Unit in [dB] - Range [-31 <-> -1] - [-23 by default]. Only used for dual mono.

Definition at line 12302 of file DCM.idl.

**8.72.5.958 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::lAuxMixingLevel**

Aux Mixing Level, Unit in [dB] - Range [80 <-> 111] - [105 by default].

Definition at line 12130 of file DCM.idl.

**8.72.5.959 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::lAuxMixingLevel**

Aux Mixing Level, Unit in [dB] - Range [80 <-> 111] - [105 by default]. Only used for dual mono.

Definition at line 12290 of file DCM.idl.

**8.72.5.960 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lAuxMixLevel**

Mix Level (dB) times 10.

Definition at line 12689 of file DCM.idl.

**8.72.5.961 long DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t::lCenterCoefficient**

Center Coefficient TODO: range and default.

Definition at line 12460 of file DCM.idl.

**8.72.5.962 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::lCentreMixLevel**

For Future functionality, Unit in [dB].

Definition at line 12115 of file DCM.idl.

**8.72.5.963 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::lCentreMixLevel**

Center Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [-3 (default), -4.5, -6]. Ignored if enExtendedBSI\_Mode is XBSI mode.

Definition at line 12264 of file DCM.idl.

**8.72.5.964 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lCentreMixLevel**

Center Mix Level dB times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [-3, -4.5, -6].

Definition at line 12693 of file DCM.idl.

**8.72.5.965 IPS\_RefTS\_t DCM::DeviceControl::DCG\_3D\_pair\_t::left**

Definition at line 30222 of file DCM.idl.

**8.72.5.966 enDCG\_AudioResolution\_t DCM::DeviceControl::DCG\_AudioSignalInfo\_t::LeftCh-Coding**

Resolution of audio left channel.

Definition at line 31210 of file DCM.idl.

**8.72.5.967 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Length\_Type\_Bad**

Length/Type out of range.

Definition at line 19870 of file DCM.idl.

**8.72.5.968 long DCM::DeviceControl::TR\_AudioLevel\_t::Level**

Audio level change, in db. Between -31 and +31 < Positive values indicate amplification, negative ones attenuation.

Definition at line 16859 of file DCM.idl.

**8.72.5.969 DeviceLevel DCM::DeviceControl::MM\_TypeInfo::Level**

Definition at line 22604 of file DCM.idl.

**8.72.5.970 DeviceLevel DCM::DeviceControl::MM\_TypeInfo\_V2::Level**

Definition at line 22621 of file DCM.idl.

**8.72.5.971 long DCM::DeviceControl::MFPB\_AudioEncodeSettings\_t::LevelAdjustment**

Unit in dB times 10, Gui range -20 to 20 this is equivalent to value range -200 to 200.

Definition at line 11771 of file DCM.idl.

**8.72.5.972 short DCM::DeviceControl::TC\_AudioSettings\_t::LevelControl**

-20 to 20 dB, in 1/1000 dB.

Definition at line 13139 of file DCM.idl.

**8.72.5.973 eChannelLicenseStatus DCM::DeviceControl::DPI\_ShortChannelStatus\_t::License**

Definition at line 17012 of file DCM.idl.

**8.72.5.974 boolean DCM::DeviceControl::TC\_CaptionInfo\_t::Line21\_Field**

Only interpreted if DigitalCC == 0. 0 means field 1, else field 2.

Definition at line 10175 of file DCM.idl.

**8.72.5.975 long DCM::DeviceControl::RoutingStatusRecord\_t::LineNumber**

Line number on which error occurred.

Definition at line 2801 of file DCM.idl.

**8.72.5.976 DeviceBackupLinkList\_t DCM::DeviceControl::DeviceBackupParamsV2\_t::Links**

Links towards peer (0 in case of standalone)

Definition at line 21169 of file DCM.idl.

**8.72.5.977 long DCM::DeviceControl::MFPB\_AudioEncodeSettings\_t::LipSyncAdjustment**

+/- 300 ms for lipsync adjustment.

Definition at line 11774 of file DCM.idl.

**8.72.5.978 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::ILoRoCentreMixLevel**

For Future functionality, Unit in [dB].

Definition at line 12138 of file DCM.idl.

**8.72.5.979 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::ILoRoCentreMixLevel**

Lo/Ro Center Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [3, 1.5, 0, -1.5, -3 (default), -4.5, -6, -99.9 (Infinite)].

Definition at line 12309 of file DCM.idl.

**8.72.5.980 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::ILoRoCentreMixLevel**

Lo/Ro Center Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [3, 1.5, 0, -1.5, -3, -4.5, -6, -99.9 (Infinite)].

Definition at line 12699 of file DCM.idl.

**8.72.5.981 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::ILoRoSurroundMixLevel**

For Future functionality, Unit in [dB].

Definition at line 12139 of file DCM.idl.

**8.72.5.982 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::ILoRoSurroundMixLevel**

Lo/Ro Surround Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [-1.5, -3 (default), -4.5, -6, -99.9 (Infinite)].

Definition at line 12310 of file DCM.idl.

**8.72.5.983 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::ILoRoSurroundMixLevel**

Lo/Ro Surround Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [-1.5, -3, -4.5, -6, -99.9 (Infinite)].

Definition at line 12700 of file DCM.idl.

For Future functionality, Unit in [dB].

Definition at line 12135 of file DCM.idl.

**8.72.5.985 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::ILtRtCentreMixLevel**

Lt/Rt Center Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [3, 1.5, 0, -1.5, -3 (default), -4.5, -6, -99.9 (Infinite)].

Definition at line 12307 of file DCM.idl.

**8.72.5.986 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::ILtRtCentreMixLevel**

Lt/Rt Center Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [3, 1.5, 0, -1.5, -3, -4.5, -6, -99.9 (Infinite)].

Definition at line 12697 of file DCM.idl.

**8.72.5.987 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::ILtRtSurroundMixLevel**

For Future functionality, Unit in [dB].

Definition at line 12137 of file DCM.idl.

**8.72.5.988 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::ILtRtSurroundMixLevel**

Lt/Rt Surround Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [ -1.5, -3 (default), -4.5, -6, -99.9 (Infinite)].

Definition at line 12308 of file DCM.idl.

**8.72.5.989 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::ILtRtSurroundMixLevel**

Lt/Rt Surround Mix Level (dB) times 10 (eg. value -45 will be -4.5 in the GUI). Discrete values [ -1.5, -3, -4.5, -6, -99.9 (Infinite)].

Definition at line 12698 of file DCM.idl.

**8.72.5.990 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::IMainDialnorm**

Dialnorm (dB) times 10.

Definition at line 12684 of file DCM.idl.

**8.72.5.991 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::IMainDialogNormalizationLevel**

Dialog Normalization Level, Unit in [dB] - Range [-31 <-> -1] - [-23 by default].

Definition at line 12125 of file DCM.idl.

**8.72.5.992 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::IMainDialogNormalizationLevel**

Definition at line 12285 of file DCM.idl.

**8.72.5.993 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::IMainMixingLevel**

Mixing Level, Unit in [dB] - Range [80 <-> 111] - [105 by default].

Definition at line 12124 of file DCM.idl.

**8.72.5.994 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::lMainMixingLevel**

Mixing Level, Unit in [dB] - Range [80 <-> 111] - [105 by default].

Definition at line 12273 of file DCM.idl.

**8.72.5.995 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lMainMixLevel**

Mix Level (dB) times 10.

Definition at line 12685 of file DCM.idl.

**8.72.5.996 eDvbS2\_LNC\_Band\_t DCM::DeviceControl::InPort\_DvbS2\_Status\_t::LNC\_Band**

actual RF band (low or high)

Definition at line 7562 of file DCM.idl.

**8.72.5.997 eDvbS2\_LncType\_t DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t::LncType**

single band / dual band

Definition at line 7486 of file DCM.idl.

**8.72.5.998 unsigned long DCM::DeviceControl::ResourcesLoad\_t::Load100**

The relative load of resources times 100. If the value is 3456, the load is 34.56%.

Definition at line 10310 of file DCM.idl.

**8.72.5.999 enLocalFeedAvailableIndicator DCM::DeviceControl::Scte35Data\_Local\_avail\_t::Local\_avail\_indicator**

Definition at line 8646 of file DCM.idl.

**8.72.5.1000 string DCM::DeviceControl::IpServiceDisplayData::LocalIp**

IP address of local itf or 0.0.0.0 (any)

Definition at line 24641 of file DCM.idl.

**8.72.5.1001 unsigned short DCM::DeviceControl::IpServiceDisplayData::LocalPort**

Port number of listening port.

Definition at line 24643 of file DCM.idl.

**8.72.5.1002 IPS\_Ref\_t DCM::DeviceControl::BoardCfg\_t::Location**

The board location and port.

Definition at line 1658 of file DCM.idl.

**8.72.5.1003 IPS\_Ref\_t DCM::DeviceControl::BoardCfg\_V2\_t::Location**

The board location and port.

Definition at line 1700 of file DCM.idl.

**8.72.5.1004 IPS\_Ref.t DCM::DeviceControl::AsiFormatData\_t::Location**

Definition at line 6639 of file DCM.idl.

**8.72.5.1005 IPS\_Ref.t DCM::DeviceControl::ASI\_BW\_LimitData\_t::Location**

Definition at line 6956 of file DCM.idl.

**8.72.5.1006 unsigned long DCM::DeviceControl::TableKeysExt\_t::Location**

e.g. Event ID, TS\_ID, SID, PID,

Definition at line 7809 of file DCM.idl.

**8.72.5.1007 PsipUpdateLocation.t DCM::DeviceControl::PsipUpdateRule\_t::Location**

Definition at line 8487 of file DCM.idl.

**8.72.5.1008 IPS\_RefTS.t DCM::DeviceControl::RMX\_GroupSettings\_t::Location**

Location of group (depends on Type: can be TS or Port only): write-once on creation, read-only after creation. REQUIREMENT: Should be a port for group type MultiTS and be a TS for the other group types.

Definition at line 15642 of file DCM.idl.

**8.72.5.1009 IPS\_RefTS.t DCM::DeviceControl::SMX\_MFP\_GroupSettings\_t::Location**

Location of group (depends on Type: can be TS or Port only): write-once on creation, read only in the other cases. REQUIREMENT: Should be a port for group type MultiTS and be a TS for the other group types.

Definition at line 16158 of file DCM.idl.

**8.72.5.1010 unsigned long DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t::LoFrequency**

(single + dual) 1000000..20000000 KHz, step 125 KHz

Definition at line 7487 of file DCM.idl.

**8.72.5.1011 unsigned long DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t::LoFrequencyHigh**

(dual only) 1000000..20000000 KHz, step 125 KHz

Definition at line 7488 of file DCM.idl.

**8.72.5.1012 TC\_LogoSettingList.t DCM::DeviceControl::TC\_Logo\_t::Logo**

Definition at line 14074 of file DCM.idl.

**8.72.5.1013 boolean DCM::DeviceControl::Scte35Data\_Logo\_enable\_t::Logo\_enable**

Definition at line 8673 of file DCM.idl.

**8.72.5.1014 unsigned long DCM::DeviceControl::Scte35Data\_Keyer\_config\_t::Logo\_file\_number**

Definition at line 8660 of file DCM.idl.

**8.72.5.1015 LogoCfg\_t DCM::DeviceControl::TC\_LogoSetting\_t::LogoCfg**

logo configuration

Definition at line 14066 of file DCM.idl.

**8.72.5.1016 LogoCfg\_t DCM::DeviceControl::TC\_LogoCfg\_t::LogoCfg**

Definition at line 14097 of file DCM.idl.

**8.72.5.1017 LogoCfgID\_t DCM::DeviceControl::LogoCfg\_t::LogoCfgID**

unique logo configuration identifier (must be 0 when adding a new logo configuration)

Definition at line 13810 of file DCM.idl.

**8.72.5.1018 LogoCfgID\_t DCM::DeviceControl::LogoCfgFileNumber\_t::LogoCfgID**

Definition at line 13857 of file DCM.idl.

**8.72.5.1019 LogoCfgID\_t DCM::DeviceControl::TC\_ServiceLogoCfgID\_t::LogoCfgID**

Definition at line 14116 of file DCM.idl.

**8.72.5.1020 string DCM::DeviceControl::LogoCfg\_t::LogoCfgName**

logo configuration name, maximum 64 characters

Definition at line 13813 of file DCM.idl.

**8.72.5.1021 TC\_LogoDisplayList\_t DCM::DeviceControl::TC\_ServiceLogoDisplay\_t::LogoDisplay**

Definition at line 14089 of file DCM.idl.

**8.72.5.1022 LogoFileNumber\_t DCM::DeviceControl::LogoCfgFileNumber\_t::LogoFileNumber**

Definition at line 13858 of file DCM.idl.

**8.72.5.1023 unsigned long DCM::DeviceControl::LogoCfg\_t::LogoProperty**

Read only Bitmap.

- Bit 0: TRUE if the logo is in use.

Definition at line 13843 of file DCM.idl.

**8.72.5.1024 MultipleString\_t DCM::DeviceControl::VCT\_Data\_t::LongName**

more describing channel name optionally passed as descriptor. Empty string

Definition at line 9054 of file DCM.idl.

**8.72.5.1025 IPS\_LookupTS\_t DCM::DeviceControl::IPS\_ReferenceTS\_t::LookUpTS**

Definition at line 2543 of file DCM.idl.

**8.72.5.1026 DvbS2\_LookupTS\_t DCM::DeviceControl::DvbS2\_RefTS\_t::LookupTS**

the TS that needed looking up.

Definition at line 7660 of file DCM.idl.

**8.72.5.1027 unsigned short DCM::DeviceControl::LogoCfg\_t::LoopCount**

Number of times an animated logo should be displayed: loop count of 0 means animation is played continuously, loop count of 3 means animation is played three times.

Definition at line 13823 of file DCM.idl.

**8.72.5.1028 boolean DCM::DeviceControl::TC\_VideoEncodeSettings\_t::LoopFilter**

Definition at line 13018 of file DCM.idl.

**8.72.5.1029 boolean DCM::DeviceControl::TC\_VideoSettings\_t::LoopFilter**

Definition at line 13067 of file DCM.idl.

**8.72.5.1030 unsigned short DCM::DeviceControl::ForbiddenPidRange\_t::LowerPidValue**

Lower limit of the forbidden pid range.

Definition at line 3722 of file DCM.idl.

**8.72.5.1031 unsigned long DCM::DeviceControl::TS\_BackupParams\_t::LowToHighPriorityDelay**

time in seconds to wait before switching back to main input

Definition at line 21745 of file DCM.idl.

**8.72.5.1032 unsigned long DCM::DeviceControl::ServiceBackupParams\_t::LowToHighPriority-Delay**

time in seconds to wait before switching back to main input

Definition at line 23044 of file DCM.idl.

**8.72.5.1033 unsigned long DCM::DeviceControl::ServiceBackupParams2\_t::LowToHighPriority-Delay**

Definition at line 23098 of file DCM.idl.

**8.72.5.1034 unsigned long DCM::DeviceControl::DCG\_StreamBackupParams\_t::LowToHigh-PriorityDelay**

Definition at line 30993 of file DCM.idl.

**8.72.5.1035 long DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t::lSurround-Coefficient**

Surround Coefficient TODO range and default.

Definition at line 12462 of file DCM.idl.

**8.72.5.1036 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::lSurroundMixLevel**

For Future functionality, Unit in [dB].

Definition at line 12116 of file DCM.idl.

**8.72.5.1037 long DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::lSurroundMixLevel**

Surround Mix Level (dB) times 10 (eg. value -60 will be -6 in the GUI). Discrete values [-3 (default), -6, -99.9 (Infinite)]. Ignored if enExtendedBSI\_Mode is XBSI mode.

Definition at line 12265 of file DCM.idl.

**8.72.5.1038 long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::lSurroundMixLevel**

Surround Mix Level dB times 10 (eg. value -60 will be -6 in the GUI). Discrete values [-3, -6, -99.9 (Infinite)].

Definition at line 12694 of file DCM.idl.

**8.72.5.1039 boolean DCM::DeviceControl::ServiceCompSettings\_t::m\_bForced**

Definition at line 5751 of file DCM.idl.

**8.72.5.1040 boolean DCM::DeviceControl::ServiceCompSettings\_t::m\_bTracked**

Definition at line 5752 of file DCM.idl.

**8.72.5.1041 boolean DCM::DeviceControl::SrcAddr\_t::m\_bUsePortIp**

If this flag is true, the ip address of the port is used as source ip address.

Otherwise, m\_Ip applies

Definition at line 18172 of file DCM.idl.

**8.72.5.1042 string DCM::DeviceControl::TOT\_Timezone\_t::m\_CountryCode**

Definition at line 2763 of file DCM.idl.

**8.72.5.1043 octet DCM::DeviceControl::TOT\_Timezone\_t::m\_CountryRegionId**

Definition at line 2764 of file DCM.idl.

**8.72.5.1044 boolean DCM::DeviceControl::OutTS\_SrcAddr\_V2\_t::m\_DynamicSrcUdpPort**

Definition at line 18200 of file DCM.idl.

**8.72.5.1045 ePIDPassingStatus DCM::DeviceControl::ServicePIDStatus\_t::m\_ePID\_Status**

The new passing status.

Definition at line 5726 of file DCM.idl.

**8.72.5.1046 ePIDPassingStatus DCM::DeviceControl::ServiceCompSettings\_t::m\_ePID\_Status**

The new passing status.

Definition at line 5749 of file DCM.idl.

**8.72.5.1047 enuRuleSetting DCM::DeviceControl::ComponentTrackRule\_t::m\_eRuleSetting**

Definition at line 5801 of file DCM.idl.

**8.72.5.1048 enuRuleSetting DCM::DeviceControl::ComponentTrackRule\_V2\_t::m\_eRuleSetting**

Definition at line 5813 of file DCM.idl.

**8.72.5.1049 enuDefaultRuleSetting DCM::DeviceControl::DefaultTrackRule\_t::m\_eRuleSetting**

Definition at line 5841 of file DCM.idl.

**8.72.5.1050 eEsTypeStandard DCM::DeviceControl::IPS\_Service\_In\_t::m\_EsTypeStandard**

The standard of the input TS.

Definition at line 4752 of file DCM.idl.

**8.72.5.1051 enuTrackType DCM::DeviceControl::ComponentTrackRule\_t::m\_eTrackType**

Definition at line 5793 of file DCM.idl.

**8.72.5.1052 enuTrackType DCM::DeviceControl::DefaultTrackRule\_t::m\_eTrackType**

Definition at line 5833 of file DCM.idl.

**8.72.5.1053 string DCM::DeviceControl::SrcAddr\_t::m\_Ip**

This field has no effect if m\_bUsePortIp is true.

If this Ip address is used, it is used for both normal packets and fec packets, both main and backup. Must be a valid unicast address.

Definition at line 18178 of file DCM.idl.

**8.72.5.1054 octet DCM::DeviceControl::ComponentTag\_t::m\_ocComponentTag**

Definition at line 5764 of file DCM.idl.

**8.72.5.1055 octet DCM::DeviceControl::ComponentTrackRule\_t::m\_ocComponentTag**

valid if component tag tracking

Definition at line 5794 of file DCM.idl.

**8.72.5.1056 octet DCM::DeviceControl::DefaultTrackRule\_t::m\_ocComponentTag**

valid if component tag tracking

Definition at line 5834 of file DCM.idl.

**8.72.5.1057 octet DCM::DeviceControl::ComponentTrackRule\_t::m\_ocStreamType**

valid if stream type tracking

Definition at line 5795 of file DCM.idl.

**8.72.5.1058 octet DCM::DeviceControl::DefaultTrackRule\_t::m\_ocStreamType**

valid if stream type tracking

Definition at line 5835 of file DCM.idl.

**8.72.5.1059 InPID\_Data.t DCM::DeviceControl::ServicePIDStatus\_t::m\_PidRef**

Reference to the input pid to be blocked.

Definition at line 5734 of file DCM.idl.

**8.72.5.1060 InPID\_Data.t DCM::DeviceControl::ServiceCompSettings\_t::m\_PidRef**

Reference to the input pid to be blocked.

Definition at line 5748 of file DCM.idl.

**8.72.5.1061 IPS\_RefTS.t DCM::DeviceControl::InEMM\_Ref\_t::m\_RefTS**

The Slot, Port and Index of the input TS.

Definition at line 2626 of file DCM.idl.

**8.72.5.1062 IPS\_RefTS.t DCM::DeviceControl::InPID\_Data\_t::m\_RefTS**

The Slot, Port and Index of the input TS.

Definition at line 5712 of file DCM.idl.

**8.72.5.1063 IPS\_RefTS.t DCM::DeviceControl::OutTS\_SrcAddr\_t::m\_RefTs**

Definition at line 18190 of file DCM.idl.

**8.72.5.1064 IPS\_RefTS.t DCM::DeviceControl::OutTS\_SrcAddr\_V2\_t::m\_RefTs**

Definition at line 18198 of file DCM.idl.

**8.72.5.1065 IPS\_RefTS.t DCM::DeviceControl::ComponentTag\_t::m\_RefTsOut**

The Slot, Port and Index.

Definition at line 5761 of file DCM.idl.

**8.72.5.1066 IPS\_Service.t DCM::DeviceControl::ComponentTrackRule\_t::m\_Service**

Sid can be INVALID\_SID\_VALUE in case of a TS PID.

Definition at line 5792 of file DCM.idl.

**8.72.5.1067 IPS\_Service.t DCM::DeviceControl::ComponentTrackRule\_V2\_t::m\_Service**

Sid can be INVALID\_SID\_VALUE in case of a TS PID.

Definition at line 5810 of file DCM.idl.

**8.72.5.1068 SrcAddr.t DCM::DeviceControl::OutTS\_SrcAddr\_t::m\_SrcAddr**

Definition at line 18191 of file DCM.idl.

**8.72.5.1069 SrcAddr.t DCM::DeviceControl::OutTS\_SrcAddr\_V2\_t::m\_SrcAddr**

Definition at line 18199 of file DCM.idl.

**8.72.5.1070 string DCM::DeviceControl::ComponentTrackRule\_t::m\_strLanguage**

valid if stream type tracking and audio streamtype

Definition at line 5796 of file DCM.idl.

**8.72.5.1071 string DCM::DeviceControl::DefaultTrackRule\_t::m\_strLanguage**

valid if stream type tracking and audio streamtype

Definition at line 5836 of file DCM.idl.

**8.72.5.1072 string DCM::DeviceControl::TOT\_Timezone\_t::m\_Timezone**

Definition at line 2765 of file DCM.idl.

**8.72.5.1073 TrackingCriterium.t DCM::DeviceControl::ComponentTrackRule\_V2\_t::m\_Track-Criterium**

Definition at line 5811 of file DCM.idl.

**8.72.5.1074 unsigned short DCM::DeviceControl::SrcAddr\_t::m\_UdpPort**

The Port Number to use as source udp port.

Always applicable, m\_bUsePortIp has no effect.

Definition at line 18182 of file DCM.idl.

**8.72.5.1075 unsigned long DCM::DeviceControl::ComponentTrackRule\_t::m\_ulDescriptorTag**

0x56 for teletext descriptor

Definition at line 5797 of file DCM.idl.

**8.72.5.1076 unsigned long DCM::DeviceControl::DefaultTrackRule\_t::m\_ulDescriptorTag**

0x56 for teletext descriptor

Definition at line 5837 of file DCM.idl.

**8.72.5.1077 unsigned long DCM::DeviceControl::ComponentTrackRule\_t::m\_ulID**

Definition at line 5791 of file DCM.idl.

**8.72.5.1078 unsigned long DCM::DeviceControl::ComponentTrackRule\_V2\_t::m\_ulID**

Definition at line 5809 of file DCM.idl.

**8.72.5.1079 unsigned long DCM::DeviceControl::DefaultTrackRule\_t::m\_ulID**

Definition at line 5832 of file DCM.idl.

**8.72.5.1080 unsigned long DCM::DeviceControl::ServicePIDStatus\_t::m\_ulOutputSID**

Output service ID value.

Will be ignored if == INVALID\_SID\_VALUE.

Definition at line 5727 of file DCM.idl.

**8.72.5.1081 unsigned long DCM::DeviceControl::ServiceCompSettings\_t::m\_ulOutputSID**

Output service ID value. Will be ignored if INVALID\_SID\_VALUE.

Definition at line 5742 of file DCM.idl.

**8.72.5.1082 unsigned long DCM::DeviceControl::ComponentTag\_t::m\_ulOutputSid**

Definition at line 5762 of file DCM.idl.

**8.72.5.1083 unsigned long DCM::DeviceControl::ServicePIDStatus\_t::m\_ulPCR**

1 means (un)block the PCR PID in this service (other information will be ignored).

0 means that it's not the PCR PID to block.

**Note**

It maybe necessary to use ePIDPassBlock\_PID\_Type but other types then PCR can be autodetected.

Definition at line 5729 of file DCM.idl.

**8.72.5.1084 unsigned long DCM::DeviceControl::ServiceCompSettings\_t::m\_ulPCR**

1 means (un)block the PCR PID in this service (other information will be ignored).

0 means that it's not the PCR PID to block.

**Note**

It maybe necessary to use ePIDPassBlock\_PID\_Type but other types than PCR can be autodetected.

Definition at line 5743 of file DCM.idl.

**8.72.5.1085 unsigned long DCM::DeviceControl::ServiceCompSettings\_t::m\_ulTrackRuleID**

Definition at line 5753 of file DCM.idl.

**8.72.5.1086 unsigned short DCM::DeviceControl::InPID\_Data\_t::m\_usECM\_PID**

Value of the ES ECMPID at the input TS when PID is valid or the ECM pid at service level.

Will only be interpreted when different from INVALID\_PID\_VALUE.

Definition at line 5716 of file DCM.idl.

**8.72.5.1087 unsigned short DCM::DeviceControl::ComponentTrackRule\_t::m\_usEsPreferred-OutputPid**

valid if pid tracking for ECM pid: parent must exist.

Definition at line 5799 of file DCM.idl.

**8.72.5.1088 unsigned short DCM::DeviceControl::DefaultTrackRule\_t::m\_usEsPreferredOutput-Pid**

valid if pid tracking for ECM pid: parent must exist.

Definition at line 5839 of file DCM.idl.

**8.72.5.1089 unsigned short DCM::DeviceControl::ComponentTrackRule\_t::m\_usInputPid**

valid is pid tracking (ES, ECM and ES-ECM: always THE input pid)

Definition at line 5798 of file DCM.idl.

**8.72.5.1090 unsigned short DCM::DeviceControl::DefaultTrackRule\_t::m\_usInputPid**

valid is pid tracking (ES, ECM and ES-ECM: always THE input pid)

Definition at line 5838 of file DCM.idl.

**8.72.5.1091 unsigned short DCM::DeviceControl::ServiceCompSettings\_t::m\_usOutputPid**

Definition at line 5750 of file DCM.idl.

**8.72.5.1092 unsigned short DCM::DeviceControl::ComponentTag\_t::m\_usOutputPid**

Definition at line 5763 of file DCM.idl.

**8.72.5.1093 unsigned short DCM::DeviceControl::InEMM\_Ref\_t::m\_usPID**

The reference to the input EMM pid.

Definition at line 2627 of file DCM.idl.

**8.72.5.1094 unsigned short DCM::DeviceControl::InPID\_Data\_t::m\_usPID**

The reference to the input pid to be blocked Is a service ES pid or EMM pid at TS level when m\_ulOutput-SID is INVALID\_SID\_VALUE.

Definition at line 5713 of file DCM.idl.

**8.72.5.1095 unsigned short DCM::DeviceControl::ComponentTrackRule\_t::m\_usPreferredOutput-Pid**

Definition at line 5800 of file DCM.idl.

**8.72.5.1096 unsigned short DCM::DeviceControl::ComponentTrackRule\_V2\_t::m\_usPreferred-OutputPid**

Definition at line 5812 of file DCM.idl.

**8.72.5.1097 unsigned short DCM::DeviceControl::DefaultTrackRule\_t::m\_usPreferredOutputPid**

Definition at line 5840 of file DCM.idl.

**8.72.5.1098 eDvbS2\_MA\_Type\_t DCM::DeviceControl::InPort\_DvbS2\_Status\_t::MA\_Type**

Coding and modulation type.

Definition at line 7565 of file DCM.idl.

**8.72.5.1099 string DCM::DeviceControl::ArpEntry\_t::MacAddr**

e.g. "00:00:c4:25:31:12"

Definition at line 18602 of file DCM.idl.

**8.72.5.1100 IPS\_Ref\_t DCM::DeviceControl::DescrCAM\_BackupCfg\_t::MainCAM**

reference of the main CAM

Definition at line 28634 of file DCM.idl.

**8.72.5.1101 string DCM::DeviceControl::SMX36\_VSEBackup\_t::MainEncoderIPAddress**

Management IP Address of the Main encoder.

Definition at line 24339 of file DCM.idl.

**8.72.5.1102 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::MainEncoderIPAddress**

Management IP Address of the Main encoder.

Definition at line 24351 of file DCM.idl.

**8.72.5.1103 unsigned long DCM::DCM\_Notifications::Messages::MainID**

Definition at line 32235 of file DCM.idl.

**8.72.5.1104 IPS\_Service\_In\_V2.t DCM::DeviceControl::IPS\_ServiceData\_Out\_V2\_t::MainInput-Service**

Read only : Reference to the main input service that was used to create the output service.

Definition at line 4946 of file DCM.idl.

**8.72.5.1105 IPS\_Service\_In\_V2.t DCM::DeviceControl::IPS\_ServiceData\_Out\_V3\_t::MainInput-Service**

Read only : Reference to the main input service that was used to create the output service.

Definition at line 4977 of file DCM.idl.

**8.72.5.1106 IPS\_Service\_In\_V2.t DCM::DeviceControl::TC\_ServiceData\_t::MainInputService**

Read only : Reference to the main input service that was used to create the service.

Definition at line 5015 of file DCM.idl.

**8.72.5.1107 IPS\_Service\_In\_V2.t DCM::DeviceControl::TC\_ServiceDataV2\_t::MainInputService**

Read only : Reference to the main input service that was used to create the service.

Definition at line 5605 of file DCM.idl.

**8.72.5.1108 IPS\_Service\_In\_V2.t DCM::DeviceControl::DescrServiceData\_t::MainInputService**

main input service

Definition at line 28096 of file DCM.idl.

**8.72.5.1109 unsigned short DCM::DeviceControl::DPI\_PidCouple\_t::MainPid**

Main Input PID value.

Definition at line 17118 of file DCM.idl.

**8.72.5.1110 unsigned short DCM::DeviceControl::ASI\_MirrorCfg\_t::MainPortNr**

Mirror source port from where content is routed.

Definition at line 6653 of file DCM.idl.

**8.72.5.1111 unsigned short DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::MainScrambling-KeyIndex**

Main index into the scrambling key list.

Definition at line 22050 of file DCM.idl.

**8.72.5.1112 eASI\_DTF\_ScramblingType DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::Main-ScramblingType**

Main scrambling type.

Definition at line 22052 of file DCM.idl.

**8.72.5.1113 AlternateSrcId\_t DCM::DeviceControl::AlternateSourceSettings\_t::MainSourceId**

the ID of the main source (this is initially the original source) (read-only)

Definition at line 17733 of file DCM.idl.

**8.72.5.1114 unsigned long DCM::DeviceControl::DeviceBackupParams\_t::MainToBackupDelay**

[Time](#) in seconds to wait before switching to backup device, range 1-60 s.

Definition at line 21151 of file DCM.idl.

**8.72.5.1115 unsigned long DCM::DeviceControl::DeviceBackupParamsV2\_t::MainToBackupDelay**

[Time](#) in seconds to wait before switching to backup device or deactivating, range 1-60 s.

Definition at line 21171 of file DCM.idl.

**8.72.5.1116 string DCM::DeviceControl::SMX36\_VSEBackup\_t::MainVideoStreamEncoderName**

future Name of the video stream on which the statmuxing is running.

Definition at line 24341 of file DCM.idl.

**8.72.5.1117 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::MainVideoStreamEncoder-Name**

future Name of the video stream on which the statmuxing is running.

Definition at line 24353 of file DCM.idl.

**8.72.5.1118 string DCM::DeviceControl::SMX36\_VSEBackup\_t::MainVSEName**

VSE Name of the main VSE (max length = 20).

Definition at line 24340 of file DCM.idl.

**8.72.5.1119 string DCM::DeviceControl::SMX36\_VSEBackup\_V2\_t::MainVSEName**

VSE Name of the main VSE (max length = 20).

Definition at line 24352 of file DCM.idl.

**8.72.5.1120 unsigned short DCM::DeviceControl::VCT\_Data\_t::MajorChannelNumber**

first part of channel number (10 bits)

Definition at line 9055 of file DCM.idl.

**8.72.5.1121 short DCM::DeviceControl::VersionParts::MajorNumber**

Definition at line 1264 of file DCM.idl.

**8.72.5.1122 MsgSeverity DCM::DeviceControl::MessageSetting::MajorSeverity**

will be used for the analog messages.

Definition at line 22450 of file DCM.idl.

**8.72.5.1123 unsigned long DCM::DeviceControl::SMX36\_AlgorithmIdentifier\_t::MajorVersion**

Major version part: the xx out of Vxx.yy.

Definition at line 23885 of file DCM.idl.

**8.72.5.1124 IPS\_Ref\_t DCM::DeviceControl::SMX\_Encoder\_t::Management**

Definition at line 23458 of file DCM.idl.

**8.72.5.1125 unsigned short DCM::DeviceControl::DescrCAM\_Status\_t::ManufactureCode**

manufacture code

Definition at line 28696 of file DCM.idl.

**8.72.5.1126 unsigned short DCM::DeviceControl::DescrCAM\_Status\_t::ManufacturerId**

manufacturer id

Definition at line 28695 of file DCM.idl.

**8.72.5.1127 eSpliceMatchRule DCM::DeviceControl::DPI\_PidCouple\_t::MatchingRule**

Matching rule.

Definition at line 17120 of file DCM.idl.

**8.72.5.1128 unsigned long DCM::DeviceControl::BitRateMeasurement\_t::MaxBitRate**

Definition at line 9784 of file DCM.idl.

**8.72.5.1129 unsigned long DCM::DeviceControl::TR\_BitrateLimits\_t::MaxBitrate**

Maximum bitrate in bps.

Definition at line 14973 of file DCM.idl.

**8.72.5.1130 unsigned long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_t::MaxBitrate**

maximum allowed bitrate for this service In bits per second. Range: 3Mbps to 30Mbps REQUIREMENT: MaxBitrate has to be larger or equal MinBitrate REMARK: in RateLimit mode, the MaxBitrate indicates the rate limit. DEFAULT when service is added into a group: The Statmux Group bitrate or 12500000, whatever is the smallest.

Definition at line 16222 of file DCM.idl.

**8.72.5.1131 unsigned long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_V2\_t::MaxBitrate**

see [SMX\\_MFP\\_SvcSettings\\_t](#)

Definition at line 16258 of file DCM.idl.

**8.72.5.1132 unsigned long DCM::DeviceControl::SMX\_Encoder\_t::MaxBitrate**

Definition at line 23464 of file DCM.idl.

**8.72.5.1133 unsigned long DCM::DeviceControl::SMX36\_VSEParams\_t::MaxBitrate**

(bps) Maximum bitrate. Range (200.000 -> 60.000.000)

Definition at line 24004 of file DCM.idl.

**8.72.5.1134 unsigned long DCM::DeviceControl::SMX36\_VSEParams\_V2\_t::MaxBitrate**

(bps) Maximum bitrate. Range (200.000 -> 60.000.000)

Definition at line 24015 of file DCM.idl.

**8.72.5.1135 unsigned short DCM::DeviceControl::DescrCAM\_Cfg\_t::MaxBitRate**

In Mbps. Range: 72 .. 200. Default: 72.

Definition at line 28514 of file DCM.idl.

**8.72.5.1136 unsigned short DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t::MaxBitRate**

In Mbps. Range: 72 .. 200. Default: 72.

Definition at line 28540 of file DCM.idl.

**8.72.5.1137 unsigned short DCM::DeviceControl::MaximumLogoSize\_t::MaxLogoHeight**

Maximum logo width in pixels, 0 means unlimited.

Definition at line 13850 of file DCM.idl.

**8.72.5.1138 unsigned short DCM::DeviceControl::MaximumLogoSize\_t::MaxLogoWidth**

Definition at line 13849 of file DCM.idl.

**8.72.5.1139 unsigned short DCM::DeviceControl::MessageBufferInfo::MaxSeqNumber**

Maximum allowed sequence Numbers.

Definition at line 22365 of file DCM.idl.

**8.72.5.1140 unsigned long DCM::DeviceControl::DCG\_JP2K\_params\_t::MaxStreamBitRate**

Definition at line 31306 of file DCM.idl.

**8.72.5.1141 unsigned long DCM::DeviceControl::DCG\_JP2K\_params\_V2\_t::MaxStreamBitRate**

Definition at line 31326 of file DCM.idl.

name of AC (extension to Simulcrypt protocol)

Definition at line 27634 of file DCM.idl.

**8.72.5.1256 string DCM::DeviceControl::DescrResource\_t::Name**

user friendly name of the descrambling resource. Default names are assigned by the [DCM](#), e.g. 'CAM 1', 'BISS'.

Definition at line 28032 of file DCM.idl.

**8.72.5.1257 string DCM::DeviceControl::EasConfig\_t::Name**

a user friendly name identifying the proxy. Names must be unique. Upper/lower case and white space are ignored in the uniqueness check.

Definition at line 28991 of file DCM.idl.

**8.72.5.1258 string DCM::DeviceControl::GPI\_Settings\_t::Name**

name of the gpi pin indicating the function

Definition at line 31577 of file DCM.idl.

**8.72.5.1259 unsigned short DCM::DeviceControl::VideoSignalInfo\_t::NbrOfAudios**

Definition at line 30203 of file DCM.idl.

**8.72.5.1260 unsigned long DCM::DeviceControl::VideoSignalInfo\_t::NbrOfLinesPerFrame**

Definition at line 30207 of file DCM.idl.

**8.72.5.1261 unsigned long DCM::DeviceControl::MM\_MeasurementStat::NbrOfOpenStates**

Definition at line 22632 of file DCM.idl.

**8.72.5.1262 unsigned short DCM::DeviceControl::Svc\_PsipEitRegenerationInfo\_t::NbrOfTables**

Definition at line 9483 of file DCM.idl.

**8.72.5.1263 unsigned short DCM::DeviceControl::Svc\_PsipEttRegenerationInfo\_t::NbrOfTables**

Definition at line 9495 of file DCM.idl.

**8.72.5.1264 enNetworkFeedActiveIndicator DCM::DeviceControl::Scte35Data\_Network\_active\_t::Network\_active\_indicator**

Definition at line 8639 of file DCM.idl.

**8.72.5.1265 IPS\_Ref\_t DCM::DeviceControl::DeviceBackupLink\_t::NetworkInterface**

Specify BoardNr = 0 and PortNr = 0 for the 10/100 management network interface and PortNr = 1 for the GbE C/A network interface.

Definition at line 21121 of file DCM.idl.

**8.72.5.1266 IPS\_Ref\_t DCM::DeviceControl::DeviceBackupParams\_t::NetworkInterface**

Specify BoardNr = 0 and PortNr = 0 for the 10/100 management network interface and PortNr = 1 for the GbE C/A network interface.

Definition at line 21144 of file DCM.idl.

**8.72.5.1267 IPS\_Ref\_t DCM::DeviceControl::EasConfig\_t::NetworkInterface**

Specify BoardNr = 0 and PortNr = 0 for the 10/100 management network interface and PortNr = 1 for the GbE CA network interface.

Definition at line 28986 of file DCM.idl.

**8.72.5.1268 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::NewOnId**

Definition at line 32263 of file DCM.idl.

**8.72.5.1269 unsigned long DCM::DCM\_Notifications::Output\_TS\_Change::NewOnId**

Definition at line 32277 of file DCM.idl.

**8.72.5.1270 ServiceId\_t DCM::DeviceControl::IPS\_ServiceData\_Out\_V2\_t::NewOutputSID**

Requested Service ID for an outgoing service.

- Legal values are 1..65535

Definition at line 4927 of file DCM.idl.

**8.72.5.1271 ServiceId\_t DCM::DeviceControl::IPS\_ServiceData\_Out\_V3\_t::NewOutputSID**

Requested Service ID for an outgoing service.

- Legal values are 1..65535

Definition at line 4958 of file DCM.idl.

**8.72.5.1272 unsigned short DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::NewPID**

New output PID value: 0xFFFF means unassigned.

Definition at line 5888 of file DCM.idl.

**8.72.5.1273 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::NewTsId**

Definition at line 32265 of file DCM.idl.

**8.72.5.1274 unsigned long DCM::DCM\_Notifications::Output\_TS\_Change::NewTsId**

Definition at line 32279 of file DCM.idl.

**8.72.5.1275 unsigned long DCM::DeviceControl::DPI\_ShortChannelStatus\_t::NextSplice**

Definition at line 17014 of file DCM.idl.

**8.72.5.1276 eNitInPat DCM::DeviceControl::OutTS\_NitInPat\_t::NitInPat**

Definition at line 4009 of file DCM.idl.

**8.72.5.1277 unsigned short DCM::DeviceControl::RipSettings\_t::NormalMetric**

RIP metric to be advertised when TS is streaming and in good shape. Range [1,16], default 1.

Definition at line 31927 of file DCM.idl.

**8.72.5.1278 unsigned short DCM::DeviceControl::FEC\_Enc\_ErrorGen\_t::NrErrorPackets**

number of error packets (IPGW: range 1..512)

Definition at line 19440 of file DCM.idl.

**8.72.5.1279 unsigned short DCM::DeviceControl::FEC\_Enc\_ErrorGen\_t::NrGoodPackets**

number of good packets (IPGW: range 1..65535)

Definition at line 19439 of file DCM.idl.

**8.72.5.1280 boolean DCM::DeviceControl::SMX36\_Pool\_V2\_t::NtpSyncRequired**

RW If True, then if [DCM](#) NTP Sync Alarm is set, put all VSE members to default rate.

Definition at line 23814 of file DCM.idl.

**8.72.5.1281 unsigned short DCM::DeviceControl::GPI\_Settings\_t::Number**

gpi pin number (1 to 5)

Definition at line 31576 of file DCM.idl.

**8.72.5.1282 unsigned short DCM::DeviceControl::GPI\_StatusControl\_t::Number**

gpi pin number

Definition at line 31588 of file DCM.idl.

**8.72.5.1283 unsigned long DCM::DeviceControl::IPS\_InputTS\_t::NumberOfServices**

Number of services present on this input TS.

Definition at line 2353 of file DCM.idl.

**8.72.5.1284 unsigned long DCM::DeviceControl::IPS\_OutputTS\_t::NumberOfServices**

Number of services present on this output TS.

Definition at line 2472 of file DCM.idl.

**8.72.5.1285 unsigned long DCM::DeviceControl::IPS\_OutputTS\_V2\_t::NumberOfServices**

Number of services present on this output TS.

Definition at line 2512 of file DCM.idl.

**8.72.5.1286 octet DCM::DeviceControl::TrackingCriterium\_t::oComponentTag**

Definition at line 5050 of file DCM.idl.

**8.72.5.1287 string DCM::DeviceControl::ASI\_DTF\_ScramblingKey\_t::OddKey**

Hex encoded scrambling key for use with odd scrambling, a valid key is exactly 12 characters long.

Definition at line 22080 of file DCM.idl.

**8.72.5.1288 ByteStream DCM::DeviceControl::ASI\_DTF\_ScramblingKeyPair\_t::OddScrambling-Key**

Scrambling key for use with odd scrambling, should be exactly 6 bytes long.

Definition at line 22067 of file DCM.idl.

**8.72.5.1289 ByteStream DCM::DeviceControl::DescrTrackingRule\_t::OddSessionWord**

session word for BISS descrambling with odd parity.

Definition at line 28421 of file DCM.idl.

**8.72.5.1290 ByteStream DCM::DeviceControl::DescrSvcConfig\_t::OddSessionWord**

session word for BISS with odd parity.

Definition at line 28450 of file DCM.idl.

**8.72.5.1291 ByteStream DCM::DeviceControl::DescrBISS\_Cfg\_t::OddSessionWord**

session word for BISS descrambling with odd parity.

Definition at line 28773 of file DCM.idl.

**8.72.5.1292 double DCM::DeviceControl::NTP\_Stats\_t::Offset**

Indicates the offset of the peer clock relative to the local clock, in seconds.

Definition at line 700 of file DCM.idl.

**8.72.5.1293 short DCM::DeviceControl::Table\_Sync\_Info\_t::Offset**

value in ms that is added to the T\*T time before applying it to the system clock. < Can be a negative value!  
Value in seconds (steps of 1000ms) to correct GPS < time to UTC time. Not supported for the moment and always reset to 0.

Definition at line 739 of file DCM.idl.

**8.72.5.1294 unsigned short DCM::DeviceControl::MessageBufferInfo::OldestSeqNumber**

Oldest Message in the Buffer.

Definition at line 22363 of file DCM.idl.

**8.72.5.1295 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::OldOnId**

Definition at line 32262 of file DCM.idl.

**8.72.5.1296 unsigned long DCM::DCM\_Notifications::Output\_TS\_Change::OldOnId**

Definition at line 32276 of file DCM.idl.

**8.72.5.1297 long DCM::DeviceControl::ServiceES\_t::OldPID**

Definition at line 5868 of file DCM.idl.

**8.72.5.1298 unsigned short DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::OldPID**

Value of the PID at the input TS.

Definition at line 5887 of file DCM.idl.

**8.72.5.1299 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::OldTsId**

Definition at line 32264 of file DCM.idl.

**8.72.5.1300 unsigned long DCM::DCM\_Notifications::Output\_TS\_Change::OldTsId**

Definition at line 32278 of file DCM.idl.

**8.72.5.1301 unsigned long DCM::DeviceControl::IPS\_InputTS\_t::ONID**

ONID range: [0..65535].

Definition at line 2352 of file DCM.idl.

**8.72.5.1302 unsigned long DCM::DeviceControl::IPS\_OutputTS\_t::ONID**

ONID range: 0..65535.

Definition at line 2471 of file DCM.idl.

**8.72.5.1303 unsigned long DCM::DeviceControl::IPS\_OutputTS\_V2\_t::ONID**

ONID range: 0..65535.

Definition at line 2511 of file DCM.idl.

**8.72.5.1304 unsigned long DCM::DeviceControl::TableKeys\_t::OnId**

Set to 0xFFFFFFFF when not used.

Definition at line 2753 of file DCM.idl.

**8.72.5.1305 unsigned long DCM::DeviceControl::PSIGSubTable\_t::OnId**

As in PSIG channel setup.

Definition at line 8340 of file DCM.idl.

**8.72.5.1306 unsigned long DCM::DeviceControl::IIOP\_SubTable\_t::OnId**

original network ID of targeted output TS.

Definition at line 8393 of file DCM.idl.

**8.72.5.1307 unsigned long DCM::DCM\_Notifications::Output\_TS\_Delete::OnId**

Definition at line 32290 of file DCM.idl.

**8.72.5.1308 unsigned short DCM::DeviceControl::Scte35Data\_Keyer\_config\_t::Opacity**

Definition at line 8667 of file DCM.idl.

**8.72.5.1309 unsigned short DCM::DeviceControl::LogoCfg\_t::Opacity**

10 \* opacity in % and in steps of .5 % (e.g. Opacity = 105 means 10.5 %), < 100% opaque means not transparent at all.

Definition at line 13816 of file DCM.idl.

**8.72.5.1310 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Opcode\_Bad**

Invalid Opcode.

Definition at line 19871 of file DCM.idl.

**8.72.5.1311 eRestoreOption DCM::DeviceControl::RestoreOption::Option**

Which option.

Definition at line 21478 of file DCM.idl.

**8.72.5.1312 eRestoreOption\_V2 DCM::DeviceControl::RestoreOption\_V2::Option**

Which option.

Definition at line 21690 of file DCM.idl.

**8.72.5.1313 string DCM::DeviceControl::BoardIdentification::OrderNumber**

Definition at line 1284 of file DCM.idl.

**8.72.5.1314 unsigned long DCM::DeviceControl::ETV\_ApplicationIdent\_t::OrgId**

Definition at line 17342 of file DCM.idl.

**8.72.5.1315 octet DCM::DeviceControl::TrackingCriterium\_t::oStreamType**

Definition at line 5051 of file DCM.idl.

**8.72.5.1316 AlternateSrcId\_t DCM::DeviceControl::Scte35Source\_t::OtherSrcId**

the ID of this alternate source, < if Scte35Source == other

Definition at line 17821 of file DCM.idl.

**8.72.5.1317 IPS\_UDP\_Socket\_t DCM::DeviceControl::HitlessMergeSetting\_t::OtherUDP\_Socket**

this is only valid when Mode is eHitlessMergeMode\_EnabledOtherUDP\_Socket

Definition at line 19675 of file DCM.idl.

**8.72.5.1318 octet DCM::DeviceControl::IPS\_Out\_ESSettings\_V2\_t::OutES\_Type**

dvb streamtype of the output TS.

Definition at line 5951 of file DCM.idl.

**8.72.5.1319 TableKeys\_t DCM::DeviceControl::TableGenerationData\_t::OutKeys**

Keys to locate the output table.

Definition at line 6027 of file DCM.idl.

**8.72.5.1320 TableKeys\_t DCM::DeviceControl::TableGenerationData\_V2\_t::OutKeys**

Keys to locate the output table.

Definition at line 6049 of file DCM.idl.

**8.72.5.1321 eTriBool DCM::DeviceControl::VCT\_Data\_t::OutOfBand**

(CVCT only) true: out of band physical transmission

Definition at line 9062 of file DCM.idl.

**8.72.5.1322 unsigned long long DCM::DeviceControl::FEC\_Dec\_Statistics\_t::OutOfRangePacketCount**

Definition at line 19161 of file DCM.idl.

**8.72.5.1323 unsigned long DCM::DeviceControl::PCTM\_ThresholdValues\_t::OutOfRangePackets**

Definition at line 20282 of file DCM.idl.

**8.72.5.1324 unsigned long long DCM::DeviceControl::PCTM\_PacketCounters\_t::OutOfRangePackets**

Definition at line 20312 of file DCM.idl.

**8.72.5.1325 unsigned short DCM::DeviceControl::TableGenerationData\_t::OutPid**

Pid on which the output table should be played out PMT Pid range: 0x0020 .

. 0x1FFE PAT-SDT Pid range: 0x0000 .. 0x1FFE

Definition at line 6028 of file DCM.idl.

**8.72.5.1326 unsigned short DCM::DeviceControl::TableGenerationData\_V2\_t::OutPid**

Pid on which the output table should be played out PMT Pid range: 0x0020 .

. 0x1FFE PAT-SDT Pid range: 0x0000 .. 0x1FFE

Definition at line 6050 of file DCM.idl.

**8.72.5.1327 unsigned long DCM::DeviceControl::TR\_DelayMode\_t::OutputDelay**

Customized setting of the delay reserved for the output buffer embedded in the transrater board (modifying this setting can result in worst video quality)

Definition at line 14956 of file DCM.idl.

**8.72.5.1328 unsigned long DCM::DeviceControl::TR\_DelayMode\_V2\_t::OutputDelay**

Customized setting of the delay reserved for the output buffer embedded in the transrater board (modifying this setting can result in worst video quality)

Definition at line 14966 of file DCM.idl.

**8.72.5.1329 eAsiOutputMode DCM::DeviceControl::AsiFormatData\_t::OutputMode**

Definition at line 6641 of file DCM.idl.

**8.72.5.1330 ASI\_DTF\_List\_t DCM::DeviceControl::ASI\_DTF\_OutputTS\_t::OutputMux**

List of input settings.

Definition at line 22037 of file DCM.idl.

**8.72.5.1331 ASI\_DTF\_ListEx\_t DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::OutputMux**

List of input settings.

Definition at line 22053 of file DCM.idl.

**8.72.5.1332 unsigned short DCM::DeviceControl::IPS\_OutPID\_Data\_t::OutputPID**

Definition at line 2561 of file DCM.idl.

**8.72.5.1333 unsigned short DCM::DeviceControl::IPS\_OutPID\_Data2\_t::OutputPID**

Definition at line 2582 of file DCM.idl.

**8.72.5.1334 unsigned short DCM::DeviceControl::SI\_AutoPassRules\_t::OutputPid**

PID on which to play out autopassed tables.

Definition at line 2906 of file DCM.idl.

**8.72.5.1335 unsigned short DCM::DeviceControl::ES\_TypeSetting\_t::OutputPid**

Definition at line 5849 of file DCM.idl.

**8.72.5.1336 unsigned short DCM::DeviceControl::ASI\_DTF\_t::OutputPID**

Ghost PID for encapsulating this input stream.

Definition at line 21987 of file DCM.idl.

**8.72.5.1337 unsigned short DCM::DeviceControl::ASI\_DTF\_Ex\_t::OutputPID**

Ghost PID for encapsulating this input stream.

Definition at line 22005 of file DCM.idl.

**8.72.5.1338 PID\_List\_t DCM::DeviceControl::IPS\_OutPID\_Sync\_t::OutputPIDs**

The pids to be synchronized.

Definition at line 16678 of file DCM.idl.

**8.72.5.1339 PID\_List\_t DCM::DeviceControl::IPS\_OutPID\_Sync\_V2\_t::OutputPIDs**

The pids to be synchronized.

Definition at line 16694 of file DCM.idl.

**8.72.5.1340 IPS\_RefTS\_t DCM::DeviceControl::ASI\_DTF\_OutputTS\_t::OutputRef**

The reference to the DTF output stream, currently only stream 9 on port 9 is supported.

Definition at line 22034 of file DCM.idl.

**8.72.5.1341 IPS\_RefTS\_t DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t::OutputRef**

The reference to the DTF output stream, currently only stream 9 on port 9 is supported.

Definition at line 22046 of file DCM.idl.

**8.72.5.1342 IPS\_RefTS\_t DCM::DeviceControl::ASI\_DTF\_OutputTS\_RDCS\_t::OutputRef**

The reference to the DTF output stream, currently only stream 9 on port 9 is supported.

Definition at line 22059 of file DCM.idl.

**8.72.5.1343 boolean DCM::DeviceControl::IPS\_SDT\_Data\_t::OutputSDTPresent**

RW flag. false = Follow Input; true = Overrule.

Definition at line 4850 of file DCM.idl.

**8.72.5.1344 IPS\_Service.t DCM::DeviceControl::IPS\_Serv\_Dest\_t::OutputService**

Definition at line 5405 of file DCM.idl.

**8.72.5.1345 Serviceld.t DCM::DeviceControl::IPS\_ServiceData\_Out\_t::OutputSID**

ID of an outgoing service.

- 0xFFFFFFFF: Don't care or not allocated yet.
- 0..65536

Definition at line 4873 of file DCM.idl.

**8.72.5.1346 unsigned long DCM::DeviceControl::ServiceES\_t::OutputSID**

Definition at line 5865 of file DCM.idl.

**8.72.5.1347 unsigned long DCM::DeviceControl::IPS\_Out\_ServiceComponents\_t::OutputSID**

Definition at line 5935 of file DCM.idl.

**8.72.5.1348 unsigned long DCM::DeviceControl::IPS\_Out\_ServiceComponents\_V2\_t::OutputSID**

Definition at line 5964 of file DCM.idl.

**8.72.5.1349 unsigned short DCM::DeviceControl::MergedESDescriptorData\_t::OutputSid**

Definition at line 8027 of file DCM.idl.

**8.72.5.1350 DPI\_ChannelName.t DCM::DeviceControl::DPI\_ChannelSettings\_t::OutputSpliceName**

Definition at line 17020 of file DCM.idl.

**8.72.5.1351 DPI\_ChannelName.t DCM::DeviceControl::DPI\_ChannelSettings2\_t::OutputSplice-Name**

Definition at line 17034 of file DCM.idl.

**8.72.5.1352 DPI\_ChannelName.t DCM::DeviceControl::DPI\_ChannelSettings3\_t::OutputSplice-Name**

Definition at line 17049 of file DCM.idl.

**8.72.5.1353 DPI\_ChannelName.t DCM::DeviceControl::DPI\_CueRequest\_t::OutputSpliceName**

Definition at line 17085 of file DCM.idl.

**8.72.5.1354 DPI\_ChannelName.t DCM::DeviceControl::DPI\_SpliceRequest\_t::OutputSpliceName**

Identifies the spliceable output channel.

Definition at line 17104 of file DCM.idl.

**8.72.5.1355 DPI\_ChannelName.t DCM::DeviceControl::DPI\_PmtSpliceModeSetting\_t::OutputSpliceName**

Definition at line 17135 of file DCM.idl.

**8.72.5.1356 eEsTypeStandard DCM::DeviceControl::IPS\_OutputTS\_t::OutputStandard**

Indicates how different PID (ES) types must be interpreted.

Definition at line 2484 of file DCM.idl.

**8.72.5.1357 eEsTypeStandard DCM::DeviceControl::IPS\_OutputTS\_V2\_t::OutputStandard**

Indicates how different PID (ES) types must be interpreted.

Definition at line 2524 of file DCM.idl.

**8.72.5.1358 IPS\_RefSvc.t DCM::DeviceControl::ETV\_ManipulationSettings\_t::OutputSvc**

Reference to the output service.

Definition at line 17174 of file DCM.idl.

**8.72.5.1359 IPS\_RefSvc.t DCM::DeviceControl::ETV\_ManipulationSettings\_V2\_t::OutputSvc**

Reference to the output service.

Definition at line 17294 of file DCM.idl.

**8.72.5.1360 IPS\_RefSvc.t DCM::DeviceControl::ETV\_EissFilter\_t::OutputSvc**

Reference to the output service.

Definition at line 17353 of file DCM.idl.

**8.72.5.1361 DvbString.t DCM::DeviceControl::IPS\_SDT\_Data\_t::OutputUserName**

Maximum string length 255 characters.

Definition at line 4862 of file DCM.idl.

**8.72.5.1362 IPS\_RefTS.t DCM::DeviceControl::IPS\_OutputTS\_LT\_t::OutRef**

The location of the OutputTS (Board, Port and Ref).

Definition at line 4458 of file DCM.idl.

**8.72.5.1363 IPS\_RefTS.t DCM::DeviceControl::IPS\_OutputTS\_LT\_V2\_t::OutRef**

The location of the OutputTS (Board, Port and Ref).

Definition at line 4475 of file DCM.idl.

**8.72.5.1364 IPS\_RefTS.t DCM::DeviceControl::DCG\_BackupStream\_t::OutRef**

Definition at line 31035 of file DCM.idl.

**8.72.5.1365 IPS\_Service.t DCM::DeviceControl::IPS\_OutServiceSync\_t::OutService**

Definition at line 16686 of file DCM.idl.

**8.72.5.1366 IPS\_Service.t DCM::DeviceControl::IPS\_OutServiceSync\_V2\_t::OutService**

Definition at line 16702 of file DCM.idl.

**8.72.5.1367 IPS\_RefTS.t DCM::DeviceControl::OutTS\_AlarmSetting\_t::OutTsRef**

Reference to the TS for which the settings are intended.

Definition at line 22997 of file DCM.idl.

**8.72.5.1368 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Oversize**

Oversize frames.

Definition at line 19865 of file DCM.idl.

**8.72.5.1369 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Oversize**

Oversized frames.

Definition at line 19888 of file DCM.idl.

**8.72.5.1370 PCTM\_PacketCounters.t DCM::DeviceControl::PCTM\_StreamPacketCounters\_t::-PacketCounters**

Definition at line 20320 of file DCM.idl.

**8.72.5.1371 eAsiPacketFormat DCM::DeviceControl::AsiFormatData\_t::PacketFormat**

Definition at line 6640 of file DCM.idl.

**8.72.5.1372 unsigned long long DCM::DeviceControl::InPort\_DvbS2\_Counters\_t::PacketsError-Count**

Definition at line 7595 of file DCM.idl.

**8.72.5.1373 unsigned short DCM::DeviceControl::HitlessMergeSetting\_t::PacketWindow**

For future use, will read 0.

Definition at line 19676 of file DCM.idl.

**8.72.5.1374 SMX36\_VSEParams.t DCM::DeviceControl::SMX36\_VSE\_t::params**

Statmux parameters for the VSE.

Definition at line 24053 of file DCM.idl.

**8.72.5.1375 SMX36\_VSEParams.t DCM::DeviceControl::SMX36\_VSE\_V2\_t::params**

Statmux parameters for the VSE.

Definition at line 24072 of file DCM.idl.

**8.72.5.1376 SMX36\_VSEParams\_V2.t DCM::DeviceControl::SMX36\_VSE\_V3\_t::params**

Statmux parameters for the VSE.

Definition at line 24139 of file DCM.idl.

**8.72.5.1377 SMX36\_VSEParams\_V2\_t DCM::DeviceControl::SMX36\_VSE\_V4\_t::params**

Statmux parameters for the VSE.

Definition at line 24196 of file DCM.idl.

**8.72.5.1378 IPS\_RefSvc\_t DCM::DeviceControl::TC\_ServiceData\_t::ParentRefSvc**

Read only : The RefSvc of the main service. If RefSvc == ParentRefSvc, this is a main service. For PIP RefSvc <> ParentRefSvc.

Definition at line 5003 of file DCM.idl.

**8.72.5.1379 IPS\_RefSvc\_t DCM::DeviceControl::TC\_ServiceDataV2\_t::ParentRefSvc**

Read only : The RefSvc of the main service. If RefSvc == ParentRefSvc, this is a main service. For PIP RefSvc <> ParentRefSvc.

Definition at line 5593 of file DCM.idl.

**8.72.5.1380 unsigned long DCM::DeviceControl::JclInitialValue\_t::Part1**

Definition at line 24693 of file DCM.idl.

**8.72.5.1381 unsigned long DCM::DeviceControl::JclSystemId\_t::Part1**

Definition at line 24700 of file DCM.idl.

**8.72.5.1382 unsigned long DCM::DeviceControl::JclInitialValue\_t::Part2**

Definition at line 24694 of file DCM.idl.

**8.72.5.1383 unsigned long DCM::DeviceControl::JclSystemId\_t::Part2**

Definition at line 24701 of file DCM.idl.

**8.72.5.1384 unsigned long DCM::DeviceControl::JclSystemId\_t::Part3**

Definition at line 24702 of file DCM.idl.

**8.72.5.1385 unsigned long DCM::DeviceControl::JclSystemId\_t::Part4**

Definition at line 24703 of file DCM.idl.

**8.72.5.1386 unsigned long DCM::DeviceControl::JclSystemId\_t::Part5**

Definition at line 24704 of file DCM.idl.

**8.72.5.1387 unsigned long DCM::DeviceControl::JclSystemId\_t::Part6**

Definition at line 24705 of file DCM.idl.

**8.72.5.1388 unsigned long DCM::DeviceControl::JclSystemId\_t::Part7**

Definition at line 24706 of file DCM.idl.

**8.72.5.1389 unsigned long DCM::DeviceControl::JclSystemId\_t::Part8**

Definition at line 24707 of file DCM.idl.

**8.72.5.1390 boolean DCM::DeviceControl::DefaultAutoPassRules::PassDeleteECMs**

read-write; true = ECMs are auto passed/deleted; false = block of ECMs; default true

Definition at line 2882 of file DCM.idl.

**8.72.5.1391 boolean DCM::DeviceControl::Service\_AutoPassRules::PassDeleteECMs**

read-write; true = ECMs are auto passed/deleted; false = block of ECMs; default true

Definition at line 2890 of file DCM.idl.

**8.72.5.1392 boolean DCM::DeviceControl::DefaultAutoPassRules::PassDeleteES\_ECMs**

read-write; true = ES\_ECMs are auto passed/deleted; false = block of ES\_ECMs

Definition at line 2883 of file DCM.idl.

**8.72.5.1393 boolean DCM::DeviceControl::Service\_AutoPassRules::PassDeleteES\_ECMs**

read-write; true = ES\_ECMs are auto passed/deleted; false = block of ES\_ECMs

Definition at line 2891 of file DCM.idl.

**8.72.5.1394 boolean DCM::DeviceControl::DefaultAutoPassRules::PassDeleteESs**

read-write; true = ESs are auto passed/deleted; false = block of ESs; default true

Definition at line 2881 of file DCM.idl.

**8.72.5.1395 boolean DCM::DeviceControl::Service\_AutoPassRules::PassDeleteESs**

read-write; true = ESs are auto passed/deleted; false = block of ESs; default true

Definition at line 2889 of file DCM.idl.

**8.72.5.1396 boolean DCM::DeviceControl::TS\_AutoPassRules::PassDeleteUnref**

read-write; true = unreferenced pids auto passed/deleted; false = no auto pass/delete of unreferenced pids

Definition at line 2856 of file DCM.idl.

**8.72.5.1397 boolean DCM::DeviceControl::TS\_AutoPassRules::PassKeepEMMs**

read-write; true = EMMs auto passed ; false = no auto pass of EMMs

Definition at line 2858 of file DCM.idl.

**8.72.5.1398 boolean DCM::DeviceControl::TS\_AutoPassRules::PassKeepServices**

read-write; true = services auto passed ; false = no auto pass of services

Definition at line 2860 of file DCM.idl.

**8.72.5.1399 eSMX\_MFP\_PassThroughMode DCM::DeviceControl::SMX\_MFP\_SvcSettings\_V2\_t::PassThroughMode**

How pass-through services should be handled.

Definition at line 16257 of file DCM.idl.

**8.72.5.1400 string DCM::DeviceControl::MIP\_SyncTargetSettings\_t::Password**

Definition at line 21887 of file DCM.idl.

**8.72.5.1401 eTriBool DCM::DeviceControl::VCT\_Data\_t::PathSelect**

(CVCT only) false: path 1, true: path 2

Definition at line 9061 of file DCM.idl.

**8.72.5.1402 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Pause**

Pause Frames.

Definition at line 19868 of file DCM.idl.

**8.72.5.1403 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Pause**

Pause frames.

Definition at line 19887 of file DCM.idl.

**8.72.5.1404 boolean DCM::DeviceControl::BitrateAlarmSetting\_t::PayloadBitrateEnabled**

True means alarm monitoring is enabled for the 'Payload Bitrate Too Low' alarm.

Definition at line 22989 of file DCM.idl.

**8.72.5.1405 unsigned long DCM::DeviceControl::BitrateAlarmSetting\_t::PayloadBitrateThreshold**

In pbs. When payload drops below this threshold, alarm will be triggered.

Definition at line 22988 of file DCM.idl.

**8.72.5.1406 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::pb\_1day**

AES parity errors over the last day.

Definition at line 30932 of file DCM.idl.

**8.72.5.1407 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::pb\_1hour**

AES parity errors over the last hour.

Definition at line 30931 of file DCM.idl.

**8.72.5.1408 unsigned long DCM::DeviceControl::InTS\_AES\_Statistic\_t::pb\_1min**

AES parity errors over the last minute.

Definition at line 30930 of file DCM.idl.

**8.72.5.1409 boolean DCM::DeviceControl::TC\_PipSettings\_t::PCR\_InPip**

Should the PCR be part of a PIP packet or should it use an empty packet (on the same PID).

Definition at line 13116 of file DCM.idl.

**8.72.5.1410 unsigned long DCM::DeviceControl::MFPB\_ServiceCfg\_t::PCR\_Interval**

10 - 100 ms, in ms. 37 by default.

Definition at line 10426 of file DCM.idl.

**8.72.5.1411 unsigned long DCM::DeviceControl::TC\_PipSettings\_t::PCR\_Interval**

10 - 300 ms, in ms.

Definition at line 13115 of file DCM.idl.

**8.72.5.1412 unsigned long DCM::DeviceControl::TC\_ServiceCfg\_t::PCR\_Interval**

10 - 300 ms, in ms.

Definition at line 13175 of file DCM.idl.

**8.72.5.1413 boolean DCM::DeviceControl::MFPB\_ServiceCfg\_t::PCR\_InVideo**

Reserved for future use: Should the PCR be part of a video packet or should it use an empty packet (on the same PID).

Definition at line 10427 of file DCM.idl.

**8.72.5.1414 boolean DCM::DeviceControl::TC\_ServiceCfg\_t::PCR\_InVideo**

Should the PCR be part of a video packet or should it use an empty packet (on the same PID).

Definition at line 13176 of file DCM.idl.

**8.72.5.1415 IPS\_Out\_PIDSettings\_t DCM::DeviceControl::IPS\_Out\_ServiceComponents\_t::PCR\_PID**

Definition at line 5937 of file DCM.idl.

**8.72.5.1416 IPS\_Out\_PIDSettings\_t DCM::DeviceControl::IPS\_Out\_ServiceComponents\_V2\_t::PCR\_PID**

Definition at line 5966 of file DCM.idl.

**8.72.5.1417 unsigned short DCM::DeviceControl::IPS\_In\_ServiceComponents\_t::PCR\_PID**

Definition at line 6017 of file DCM.idl.

**8.72.5.1418 unsigned long DCM::DeviceControl::TR\_Service\_t::PCR\_Pid**

The PCR PID in the service.

Definition at line 15006 of file DCM.idl.

**8.72.5.1419 string DCM::DeviceControl::DeviceBackupLink\_t::PeerIPAddress**

IP address of the other [DCM](#), as reachable via the specified network interface.

Definition at line 21125 of file DCM.idl.

**8.72.5.1420 string DCM::DeviceControl::DeviceBackupParams\_t::PeerIPAddress**

IP Address of the other [DCM](#).

Definition at line 21140 of file DCM.idl.

**8.72.5.1421 string DCM::DeviceControl::IPSecHost::PeerIPAddress**

The IP address of the IPsec capable host.

Definition at line 24451 of file DCM.idl.

**8.72.5.1422 unsigned long DCM::DeviceControl::SI\_Table\_Period\_t::Period**

Definition at line 2731 of file DCM.idl.

**8.72.5.1423 SI\_Table\_Period\_List\_t DCM::DeviceControl::TS\_SI\_Table\_Periods\_t::Periods**

Definition at line 2746 of file DCM.idl.

**8.72.5.1424 IPS\_Ref\_t DCM::DeviceControl::IPS\_RefTS\_t::PhysRef**

See [IPS\\_Ref\\_t](#).

Definition at line 422 of file DCM.idl.

**8.72.5.1425 IPS\_Ref\_t DCM::DeviceControl::TR\_BitRateMeasurement\_t::PhysRef**

Definition at line 9858 of file DCM.idl.

**8.72.5.1426 boolean DCM::DeviceControl::PacketIndexerSettings\_t::PI\_Enabled**

Definition at line 29290 of file DCM.idl.

**8.72.5.1427 unsigned short DCM::DeviceControl::PacketIndexerSettings\_t::PI\_MaxInterval**

range 100..1000ms, in steps of 10ms

Definition at line 29291 of file DCM.idl.

**8.72.5.1428 unsigned short DCM::DeviceControl::Table\_Sync\_Info\_t::Pid**

pid value. Typically 0x14 for TDT/TOT and 0x1FFB for STT < If INVALID\_PID\_VALUE (0xFFFF) is specified then typical pid value < will be used automatically

Definition at line 736 of file DCM.idl.

**8.72.5.1429 unsigned short DCM::DeviceControl::IPS\_RefPid\_t::Pid**

Value of the PID.

Definition at line 2815 of file DCM.idl.

**8.72.5.1430 unsigned short DCM::DeviceControl::PSIGSubTable\_t::Pid**

As in PSIG stream setup.

Definition at line 8347 of file DCM.idl.

**8.72.5.1431 unsigned short DCM::DeviceControl::IIOP\_SubTable\_t::Pid**

the output PID where the sub-table is played out.

Definition at line 8396 of file DCM.idl.

**8.72.5.1432 unsigned short DCM::DeviceControl::OutTS\_PsipEttvPid\_t::Pid**

Definition at line 9574 of file DCM.idl.

**8.72.5.1433 unsigned short DCM::DeviceControl::PsipMgtInfo\_t::PID**

Definition at line 9697 of file DCM.idl.

**8.72.5.1434 unsigned short DCM::DeviceControl::TS\_CompBitRateMeasurement\_t::PID**

Definition at line 9809 of file DCM.idl.

**8.72.5.1435 unsigned short DCM::DeviceControl::ServiceCompBitRateMeasurement\_t::PID**

Definition at line 9820 of file DCM.idl.

**8.72.5.1436 unsigned short DCM::DeviceControl::MFPB\_Component\_t::Pid**

Definition at line 10559 of file DCM.idl.

**8.72.5.1437 unsigned short DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Settings\_t::-Pid**

For Future functionality. The new PID value for the extra right channel. Only used when enDualMonoToMono is split.

Definition at line 12394 of file DCM.idl.

**8.72.5.1438 unsigned short DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t::Pid**

For Future functionality. The new PID value for the extra right channel. Only used when enDualMonoToMono is split.

Definition at line 12543 of file DCM.idl.

**8.72.5.1439 unsigned short DCM::DeviceControl::TC\_Component\_t::Pid**

Definition at line 13232 of file DCM.idl.

**8.72.5.1440 unsigned short DCM::DeviceControl::TR\_AudioLevel\_t::Pid**

The PID value (0..8190)

Definition at line 16858 of file DCM.idl.

**8.72.5.1441 unsigned long DCM::DeviceControl::IPS\_OutPID\_Data2\_t::PID\_Property**

Read only Bitmap used by GUI to display specific icons < Bit 0: PID present in input TS or not < TRUE means present < FALSE: PID not present < Remark: present or not present is based on SI < For unreferenced pids based upon presence of input pid < Bit 1: ignore bit (used as scrambling bit in valid component/service) < Bit 4: input pid scrambled < TRUE means scrambled.

Definition at line 2588 of file DCM.idl.

**8.72.5.1442 unsigned long DCM::DeviceControl::IPS\_InPID\_Data\_V2\_t::PID\_Property**

Read-only bitmap used by GUI to display specific icons < Bit 0: input signal present (true) or not (false)

Definition at line 2616 of file DCM.idl.

**8.72.5.1443 unsigned long DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::PID\_Property**

Read only Bitmap used by GUI to display specific icons < Bit 0: PID present in input TS or not < TRUE means present < FALSE: PID not present < Remark: present or not present is based on SI < Bit 1: Service scrambled by DCM < TRUE means scrambled by DCM < FALSE means not scrambled by DCM < Bit 2: PID descrambled by DCM (TRUE = descrambled) < Bit 3: PID is not correctly descrambled (when descrambled by DCM) < TRUE means that not descrambled alarm is active < Bit 4: PID is scrambled at input < TRUE means scrambled at input.

Definition at line 5893 of file DCM.idl.

**8.72.5.1444 unsigned long DCM::DeviceControl::IPS\_In\_ESSettings\_t::PID\_Property**

Read only Bitmap used by GUI to display specific icons < Bit 0: PID present in input TS or not < TRUE means present < FALSE: PID not present < Remark: present or not present is based on SI < Bit 4: PID scrambled at input <.

Definition at line 6000 of file DCM.idl.

**8.72.5.1445 IPS\_OutPID\_SyncList\_t DCM::DeviceControl::IPS\_OutServiceSync\_t::PID\_SyncList**

Definition at line 16687 of file DCM.idl.

**8.72.5.1446 IPS\_OutPID\_SyncList\_V2\_t DCM::DeviceControl::IPS\_OutServiceSync\_V2\_t::PID\_SyncList**

Definition at line 16703 of file DCM.idl.

**8.72.5.1447 PID\_List\_t DCM::DeviceControl::ServiceLossTrigger\_t::pidList**

PID range: 0..8190, List of pids to monitor: only evaluated in case bit 6 in the TriggerBitmap\_t is set.

Definition at line 20848 of file DCM.idl.

**8.72.5.1448 ePIDPassingStatus DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::PIDSetting**

Set by user, can only be ePID\_StatusBlockedByUser or ePID\_StatusPassed.

Is changed through the IPS\_PassBlockPids IDL call.

Definition at line 5891 of file DCM.idl.

**8.72.5.1449 ePIDPassingStatus DCM::DeviceControl::IPS\_Out\_PIDSettings\_t::PIDStatus**

Measurement, can be different from setting.

Definition at line 5890 of file DCM.idl.

**8.72.5.1450 TC\_PipList\_t DCM::DeviceControl::TC\_PipCfg\_t::Pip**

Definition at line 13212 of file DCM.idl.

**8.72.5.1451 unsigned long DCM::DeviceControl::TC\_BoardCfg\_V2\_t::Pip\_Slots**

Definition at line 12854 of file DCM.idl.

**8.72.5.1452 boolean DCM::DeviceControl::TC\_ES\_CaptionInfo\_t::PipService**

0 means for main service; 1 means for PIP service

Definition at line 13250 of file DCM.idl.

**8.72.5.1453 unsigned long DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t::PL\_ScramblingSeq-Index**

0..262141

Definition at line 7441 of file DCM.idl.

Definition at line 5965 of file DCM.idl.

**8.72.5.1456 unsigned short DCM::DeviceControl::IPS\_In\_ServiceComponents\_t::PMT\_PID**

Definition at line 6016 of file DCM.idl.

**8.72.5.1457 ePmtSpliceMode DCM::DeviceControl::DPI\_PmtSpliceModeSetting\_t::PmtSpliceMode**

Definition at line 17136 of file DCM.idl.

**8.72.5.1458 eDvbS2\_Polarization\_t DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t::Polarization**  
horizontal or vertical

Definition at line 7434 of file DCM.idl.

**8.72.5.1459 long DCM::DeviceControl::NTP\_Stats\_t::PollInterval**

Current interval between poll attempts, in seconds.

Definition at line 697 of file DCM.idl.

**8.72.5.1460 unsigned long DCM::DeviceControl::SMX36\_Pool\_t::Pool\_Property**

Read only Bitmap used by GUI to display specific icons.

Definition at line 23791 of file DCM.idl.

**8.72.5.1461 unsigned long DCM::DeviceControl::SMX36\_Pool\_V2\_t::Pool\_Property**

Read only Bitmap used by GUI to display specific icons.

Definition at line 23811 of file DCM.idl.

**8.72.5.1462 short DCM::DeviceControl::SMX36\_StatmuxController\_t::PoolCapacity**

RO The max number of pool the controller can handle.

Definition at line 23728 of file DCM.idl.

**8.72.5.1463 long DCM::DeviceControl::SMX36\_VSE\_t::PoolId**

Pool Id of the pool containing this VSE if any if not assigned the id is -1.

Definition at line 24052 of file DCM.idl.

**8.72.5.1464 long DCM::DeviceControl::SMX36\_VSE\_V2\_t::PoolId**

Pool Id of the pool containing this VSE if any if not assigned the id is -1.

Definition at line 24071 of file DCM.idl.

**8.72.5.1465 long DCM::DeviceControl::SMX36\_VSE\_V3\_t::PoolId**

Pool Id of the pool containing this VSE if any if not assigned the id is -1.

Definition at line 24118 of file DCM.idl.

**8.72.5.1466 long DCM::DeviceControl::SMX36\_VSE\_V4\_t::PoolId**

Pool Id of the pool containing this VSE if any if not assigned the id is -1.

Definition at line 24169 of file DCM.idl.

**8.72.5.1467 unsigned short DCM::DeviceControl::SMX\_PoolRef\_t::PoolNr**

Definition at line 23350 of file DCM.idl.

**8.72.5.1468 SMX\_PoolRef\_t DCM::DeviceControl::SMX\_StatMuxPool::PoolRef**

Definition at line 23368 of file DCM.idl.

Definition at line 23419 of file DCM.idl.

**8.72.5.1471 IPS\_Ref\_t DCM::DeviceControl::NicTeam\_MemberStatus\_t::Port**

Definition at line 2204 of file DCM.idl.

**8.72.5.1472 unsigned short DCM::DeviceControl::IPS\_UDP\_Socket\_t::Port**

Recommended UDP Port range: 1024 (0X400) .. 65535 (0xFFFF).

Definition at line 2313 of file DCM.idl.

**8.72.5.1473 IPS\_Ref\_t DCM::DeviceControl::GbEPortStatsEntry\_t::Port**

The port for which the stats apply.

Definition at line 19912 of file DCM.idl.

**8.72.5.1474 ePortEnabledMode DCM::DeviceControl::BoardCfg\_V2\_t::PortEnabledMode**

How the port mode is configured.

Definition at line 1705 of file DCM.idl.

**8.72.5.1475 ePortFilterMode DCM::DeviceControl::PortFilter\_t::PortFilterMode**

Definition at line 18539 of file DCM.idl.

**8.72.5.1476 ePortFilterType DCM::DeviceControl::PortFilter\_t::PortFilterType**

Definition at line 18538 of file DCM.idl.

**8.72.5.1477 unsigned short DCM::DeviceControl::IPS\_Ref\_t::PortNr**

The physical port.

- ASI, has 10 ports. PortNr range: 0..9.
- GbE, has 4 ports. PortNr range: 0..3. The wildcard, 0xFFFF, if allowed means all ports on this board. If [IPS\\_Ref\\_t](#) is used to identify a virtual port (e.g. VLAN), PortNr can be > number of Physical ports

Definition at line 410 of file DCM.idl.

**8.72.5.1478 unsigned long DCM::DCM\_Notifications::Messages::PortNr**

Definition at line 32237 of file DCM.idl.

**8.72.5.1479 unsigned long DCM::DCM\_Notifications::DCM\_TsIdOnIdChange::PortNr**

Definition at line 32260 of file DCM.idl.

Definition at line 17067 of file DCM.idl.

**8.72.5.1498 octet DCM::DeviceControl::TR\_ServiceSettings\_t::Priority**

The transrater priority.

Definition at line 15013 of file DCM.idl.

**8.72.5.1499 octet DCM::DeviceControl::TR\_ServiceSettings\_V2\_t::Priority**

The transrater priority.

Definition at line 15458 of file DCM.idl.

**8.72.5.1500 long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_t::Priority**

relative priority (quality) in the statmux group. Range: from 0 to 6. < DEFAULT when service is added into a group: 3

Definition at line 16233 of file DCM.idl.

**8.72.5.1501 long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_V2\_t::Priority**

see [SMX\\_MFP\\_SvcSettings\\_t](#)

Definition at line 16260 of file DCM.idl.

**8.72.5.1502 unsigned short DCM::DeviceControl::VLAN\_Settings\_t::Priority**

range: 0-7 0=default 1=low 7=high (ieee 802.1D)

Definition at line 18008 of file DCM.idl.

**8.72.5.1503 unsigned short DCM::DeviceControl::SMX\_StatMuxPool::Priority**

Definition at line 23373 of file DCM.idl.

**8.72.5.1504 unsigned short DCM::DeviceControl::SMX\_StatMuxPool\_V2::Priority**

Definition at line 23391 of file DCM.idl.

**8.72.5.1505 short DCM::DeviceControl::SMX\_Encoder\_t::Priority**

Definition at line 23461 of file DCM.idl.

**8.72.5.1506 short DCM::DeviceControl::SMX36\_VSEParams\_t::Priority**

VSE Priority. Range (0..6)

Definition at line 24005 of file DCM.idl.

**8.72.5.1507 short DCM::DeviceControl::SMX36\_VSEParams\_V2\_t::Priority**

VSE Priority. Range (0..6)

Definition at line 24016 of file DCM.idl.

**8.72.5.1508 PriorityBitMode\_t DCM::DeviceControl::InTS\_PriorityBit\_t::PriorityBitSetting**

Indicates how the priority bit should be handled.

Definition at line 4352 of file DCM.idl.

**8.72.5.1509 string DCM::DeviceControl::IpServiceDisplayData::ProcessName**

Name of process that has opened the port.

Definition at line 24646 of file DCM.idl.

**8.72.5.1510 string DCM::DeviceControl::DescrCAM\_Status\_t::ProductName**

CAM product name.

Definition at line 28702 of file DCM.idl.

**8.72.5.1511 unsigned long DCM::DeviceControl::IP\_Subnet\_t::Properties**

Read only bitmap containing properties for this Subnet Bit 0: Read only This subnet is automatically configured and cannot be changed Bit 1: Main - This subnet is the main subnet.

Definition at line 2062 of file DCM.idl.

**8.72.5.1512 unsigned long DCM::DeviceControl::DescrServiceData\_t::Property**

Read only Bitmap used by GUI to display < Bit 0: Service present at input (true) or not (false). < Bit 1: TRUE if service can't be deleted < Bit 2: TRUE if service is scrambled (before descrambling) < Bit 3: TRUE if service is being descrambled by descrambler. < Bit 4: TRUE if service is in backup < Bit 5: TRUE if Service Loss Alarm is active. < Bit 6: TRUE if not-descrambled alarm is active. < Bit 7: TRUE if service is part of a TS in SFN or TS mode. < Other bits for future use.

Definition at line 28086 of file DCM.idl.

**8.72.5.1513 unsigned long DCM::DeviceControl::DescrTS\_Data\_t::Property**

Read only Bitmap used by GUI to display < Bit 0: TS present at input (true) or not (false). < Bit 1: TRUE if TS can't be deleted < Bit 2: at least one of the source input PIDs of this < TS is scrambled < Bit 3: TRUE if TS Loss Alarm is active. < Other bits for future use.

Definition at line 28199 of file DCM.idl.

**8.72.5.1514 unsigned long DCM::DeviceControl::DescrTS\_Data\_V2\_t::Property**

Read only Bitmap used by GUI to display < Bit 0: TS present at input (true) or not (false). < Bit 1: TRUE if TS can't be deleted < Bit 2: at least one of the source input PIDs of this < TS is scrambled < Bit 3: TRUE if TS Loss Alarm is active. < Other bits for future use.

Definition at line 28223 of file DCM.idl.

**8.72.5.1515 unsigned long DCM::DeviceControl::DCG\_OutputGBE\_t::Property**

Bit 0: if VLAN enabled < Bit 1: if stream is present at output.

Definition at line 30134 of file DCM.idl.

**8.72.5.1516 enumEasProtocol\_t DCM::DeviceControl::EasConfig\_t::Protocol**

protocol used by EAS proxy.

Definition at line 28998 of file DCM.idl.

**8.72.5.1517 unsigned short DCM::DeviceControl::DeviceBackupLink\_t::ProtocolUDPPort**

UDP port to be used by both DCM's. Must be the same on both DCM's for this link.

Definition at line 21128 of file DCM.idl.

**8.72.5.1518 unsigned short DCM::DeviceControl::DeviceBackupParams\_t::ProtocolUDPPort**

UDP Port to be used by both DCM's. Must be the same value on both devices.

Definition at line 21141 of file DCM.idl.

**8.72.5.1519 string DCM::DeviceControl::IpServiceDisplayData::ProtoName**

Name of application level protocol if meaningful one exists, e.g. ssh.

Definition at line 24645 of file DCM.idl.

**8.72.5.1520 string DCM::DeviceControl::EMM\_Data\_t::ProxyName**

Definition at line 2635 of file DCM.idl.

**8.72.5.1521 long DCM::DeviceControl::PSIGSubTable\_t::PsigId**

Identification of the PSIG connection (as used in the scrambler.idl functions)

Definition at line 8343 of file DCM.idl.

**8.72.5.1522 ePsigType DCM::DeviceControl::PSIGSubTable\_t::PsigType**

Property of this PSIG connection (SA specific or not)

Definition at line 8342 of file DCM.idl.

**8.72.5.1523 PsipMgtInfoList\_t DCM::DeviceControl::TS\_PsipMgtInfo\_t::PsipMgtInfoList**

Definition at line 9707 of file DCM.idl.

**8.72.5.1524 PsipUpdateRuleList\_t DCM::DeviceControl::SvcOutPsipUpdateRule\_t::PsipUpdateRuleList**

Definition at line 8495 of file DCM.idl.

**8.72.5.1525 SMX36\_QoSMode\_e DCM::DeviceControl::SMX36\_NetworkQoS\_t::QoSMode**

QoS Mode.

Definition at line 23643 of file DCM.idl.

**8.72.5.1526 TC\_QuestionList\_t DCM::DeviceControl::TC\_DependantQuestion\_t::Questions**

Definition at line 12896 of file DCM.idl.

**8.72.5.1527 octet DCM::DeviceControl::Color\_t::R**

Definition at line 13873 of file DCM.idl.

**8.72.5.1528 BitRateMeasurement\_t DCM::DeviceControl::ServiceBitRateMeasurement\_t::Rate**

Definition at line 9800 of file DCM.idl.

**8.72.5.1529 BitRateMeasurement\_t DCM::DeviceControl::TS\_CompBitRateMeasurement\_t::Rate**

Definition at line 9811 of file DCM.idl.

**8.72.5.1530 BitRateMeasurement\_t DCM::DeviceControl::ServiceCompBitRateMeasurement\_t::Rate**

Definition at line 9824 of file DCM.idl.

**8.72.5.1531 string DCM::DeviceControl::NTP\_Stats\_t::Reachability**

Indicates the reachability status of the peer as an octal number.

Definition at line 698 of file DCM.idl.

**8.72.5.1532 boolean DCM::DeviceControl::TempLicenseData::RebootNeeded**

Definition at line 20664 of file DCM.idl.

**8.72.5.1533 octet DCM::DeviceControl::DCG\_GeneratorConfig\_t::RedColorValue**

Definition at line 30739 of file DCM.idl.

Definition at line 8609 of file DCM.idl.

**8.72.5.1542 enRedusSwitchMode** DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_Single\_t::REDUS\_autoswitch

Definition at line 8618 of file DCM.idl.

**8.72.5.1543 unsigned short** DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_Single\_t::REDUS\_id

Definition at line 8616 of file DCM.idl.

**8.72.5.1544 enRedusSwitchSource** DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_Single\_t::REDUS\_state

Definition at line 8617 of file DCM.idl.

**8.72.5.1545 unsigned long** DCM::DeviceControl::IPS\_RefTS\_t::Ref

This is the TS index.

- ASI, Ref = TS index = PortNr
- GbE, 8VSB Ref = TS index != PortNr

Definition at line 423 of file DCM.idl.

**8.72.5.1546 IPS\_RefTS\_t** DCM::DeviceControl::MM\_ID\_t::Ref

board + port + TSIndex

Definition at line 434 of file DCM.idl.

**8.72.5.1547 IPS\_RefTS\_t** DCM::DeviceControl::IPS\_OutputTS\_t::Ref

The location of the TS (Board, Port and Ref).

Definition at line 2459 of file DCM.idl.

**8.72.5.1548 IPS\_RefTS\_t** DCM::DeviceControl::IPS\_OutputTS\_V2\_t::Ref

The location of the TS (Board, Port and Ref).

Definition at line 2494 of file DCM.idl.

**8.72.5.1549 IPS\_Ref\_t** DCM::DeviceControl::IPS\_LookupTS\_t::Ref

The location to search (Board, Port). Board number is ignored.

Definition at line 2535 of file DCM.idl.

**8.72.5.1550 unsigned long DCM::DeviceControl::IPS\_ReferenceTS\_t::Ref**

Definition at line 2544 of file DCM.idl.

**8.72.5.1551 Ref\_SI\_table\_ext\_t DCM::DeviceControl::SI\_Table\_Period\_t::Ref**

Definition at line 2730 of file DCM.idl.

**8.72.5.1552 Ref\_SI\_table\_ext\_t DCM::DeviceControl::SI\_Table\_GenerationMode\_t::Ref**

Definition at line 2738 of file DCM.idl.

**8.72.5.1553 IPS\_RefTS\_t DCM::DeviceControl::GbeIO\_IP\_Settings\_t::Ref**

Reference to the output stream.

Definition at line 3308 of file DCM.idl.

**8.72.5.1554 IPS\_RefTS\_t DCM::DeviceControl::IPS\_Service\_t::Ref**

Identifies the unique location (Board, Port, TS).

Definition at line 4705 of file DCM.idl.

**8.72.5.1555 IPS\_Ref\_t DCM::DeviceControl::TRBitRateSample\_t::Ref**

Identifies the unique location (Board, Port).

Definition at line 9848 of file DCM.idl.

**8.72.5.1556 IPS\_RefTS\_t DCM::DeviceControl::IPS\_OutTS\_RTP\_t::Ref**

Definition at line 17915 of file DCM.idl.

**8.72.5.1557 IPS\_Ref\_t DCM::DeviceControl::DescrResource\_t::Ref**

identification of descrambler in all other functions.

Definition at line 28030 of file DCM.idl.

**8.72.5.1558 IPS\_RefTS\_t DCM::DeviceControl::DCG\_OutputTS\_t::Ref**

The location of the TS (Board, Port and Ref).

Definition at line 30079 of file DCM.idl.

**8.72.5.1559 IPS\_RefTS\_t DCM::DeviceControl::DCG\_StreamBackupParams\_t::Ref**

Definition at line 30990 of file DCM.idl.

Definition at line 32289 of file DCM.idl.

**8.72.5.1564 IPS\_RefTS\_t DCM::DeviceControl::IPS\_In\_ServiceComponents\_t::Ref\_In**

Definition at line 6014 of file DCM.idl.

**8.72.5.1565 IPS\_RefTS\_t DCM::DeviceControl::IPS\_Out\_ServiceComponents\_t::Ref\_Out**

Definition at line 5934 of file DCM.idl.

**8.72.5.1566 IPS\_RefTS\_t DCM::DeviceControl::IPS\_Out\_ServiceComponents\_V2\_t::Ref\_Out**

Definition at line 5963 of file DCM.idl.

**8.72.5.1567 IPS\_RefTS\_t DCM::DeviceControl::DescrTS\_Data\_t::RefActiveTS**

Read only : Reference of the active input TS (for TS backup).

Definition at line 28208 of file DCM.idl.

**8.72.5.1568 IPS\_RefTS\_t DCM::DeviceControl::DescrTS\_Data\_V2\_t::RefActiveTS**

Read only : Reference of the active input TS (for TS backup).

Definition at line 28232 of file DCM.idl.

**8.72.5.1569 eNTP\_RefClockTypes DCM::DeviceControl::NTP\_Stats\_t::RefClockType**

Definition at line 695 of file DCM.idl.

**8.72.5.1570 RefProcessorEngineUnit\_t DCM::DeviceControl::MFPB\_EngineUnitCfg\_t::RefEngineUnit**

unique reference to an engine unit

Definition at line 10379 of file DCM.idl.

**8.72.5.1571 RefProcessorEngineUnit\_t DCM::DeviceControl::MFPB\_ServiceCfg\_t::RefEngineUnit**

The processor engine handling this service (engine nr == 0xFFFFE can be used to delay services)

Definition at line 10422 of file DCM.idl.

**8.72.5.1572 RefProcessorEngineUnit\_t DCM::DeviceControl::MFPB\_MPEG2FramePicturesCfg\_t::RefEngineUnit**

The processor engine handling this service (engine nr == 0xFFFFE can be used to delay services)

Definition at line 10471 of file DCM.idl.

**8.72.5.1573 string DCM::DeviceControl::NTP\_Stats\_t::RefID**

Reference Clock Identifier.

Definition at line 693 of file DCM.idl.

**8.72.5.1574 IPS\_RefTS.t DCM::DeviceControl::IPS\_InputTS\_t::RefIn**

The location of the TS (Board, Port and Ref).

Definition at line 2349 of file DCM.idl.

**8.72.5.1575 IPS\_RefTS.t DCM::DeviceControl::IPS\_Gbe\_InputTS\_t::RefIn**

The location of the TS (Board, Port and Ref).

Definition at line 2378 of file DCM.idl.

**8.72.5.1576 IPS\_RefTS.t DCM::DeviceControl::Debug\_Gbe\_InputTS\_t::RefIn**

The location of the TS (Board, Port and Ref).

Definition at line 2385 of file DCM.idl.

**8.72.5.1577 IPS\_RefTS.t DCM::DeviceControl::IPS\_ChangeInputTS\_t::RefIn**

The location of the TS (Board, Port and Ref).

Definition at line 2397 of file DCM.idl.

**8.72.5.1578 IPS\_RefTS.t DCM::DeviceControl::IPS\_OutPID\_Data\_t::RefIn**

Definition at line 2559 of file DCM.idl.

Definition at line 20311 of file DCM.idl.

**8.72.5.1687** unsigned long DCM::DeviceControl::SMX\_MFP\_TsSettings\_t::ReservedBitrate

reserved bitrate for this TS (for instance reserved for TS PIDs) In bits per second. Range: from 0 to 1 Gbps.

Definition at line 16179 of file DCM.idl.

**8.72.5.1688** unsigned long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_t::ReservedBitrate

reserved for future use: has to be filled in with 0.

Definition at line 16235 of file DCM.idl.

**8.72.5.1689** unsigned long DCM::DeviceControl::SMX\_MFP\_SvcSettings\_V2\_t::ReservedBitrate

reserved for future use: has to be filled in with 0.

Definition at line 16261 of file DCM.idl.

**8.72.5.1690** MFPB\_VideoResolution\_t DCM::DeviceControl::MFPB\_VideoStatus\_t::Resolution

Output resolution.

Definition at line 10637 of file DCM.idl.

**8.72.5.1691** TC\_VideoResolution\_t DCM::DeviceControl::TC\_VideoStatus\_t::Resolution

Definition at line 13083 of file DCM.idl.

**8.72.5.1692** enMFPB\_Resources DCM::DeviceControl::ResourcesLoad\_t::Resources

The type of resources.

Definition at line 10309 of file DCM.idl.

**8.72.5.1693** boolean DCM::DeviceControl::DeviceBackupParams\_t::Revertive

True if the device should automatically revert to main when possible.

Definition at line 21148 of file DCM.idl.

**8.72.5.1694** boolean DCM::DeviceControl::TS\_BackupParams\_t::Revertive

Definition at line 21743 of file DCM.idl.

**8.72.5.1695** boolean DCM::DeviceControl::ServiceBackupParams\_t::Revertive

Definition at line 23042 of file DCM.idl.

**8.72.5.1696 eDBURevertMode DCM::DeviceControl::DeviceBackupParamsV2\_t::RevertMode**

Revertive mode.

Definition at line 21170 of file DCM.idl.

**8.72.5.1697 IPS\_RefTS.t DCM::DeviceControl::DCG\_3D\_pair\_t::right**

Definition at line 30223 of file DCM.idl.

**8.72.5.1698 enDCG\_AudioResolution.t DCM::DeviceControl::DCG\_AudioSignalInfo\_t::RightCh-Coding**

Resolution of audio right channel.

Definition at line 31211 of file DCM.idl.

**8.72.5.1699 SNMPOperationRights DCM::DeviceControl::SNMPCommunity::Rights**

Definition at line 1166 of file DCM.idl.

**8.72.5.1700 string DCM::DeviceControl::RipInterfaceSettings::RouterAddress**

Router address, one of [224.0.0.9, 224.0.0.2, 255.255.255.255, unicast address in subnet], default 224.0.-0.9.

Definition at line 31965 of file DCM.idl.

**8.72.5.1701 unsigned short DCM::DeviceControl::RipSettings\_t::RouteTag**

Value for the Route tag field. Range [0, 65535], default 0.

Definition at line 31929 of file DCM.idl.

**8.72.5.1702 eDestRoutingStatus DCM::DeviceControl::EndDeviceEntry\_t::RoutingStatus**

routable or not

Definition at line 19035 of file DCM.idl.

**8.72.5.1703 IPS\_UDP\_Socket.t DCM::DeviceControl::DCG\_OutputFecGBE\_t::row**

Destination UDP socket for FEC ROW.

Definition at line 30144 of file DCM.idl.

**8.72.5.1704 IPS\_UDP\_Socket.t DCM::DeviceControl::FEC\_Dec\_Setting\_t::RowFEC**

Definition at line 19123 of file DCM.idl.

**8.72.5.1705 IPS\_UDP\_Socket.t DCM::DeviceControl::FEC\_Enc\_Setting\_t::RowFEC**

for 4.0 release, IP = IP TS and UDP = UDP TS + 4

Definition at line 19371 of file DCM.idl.

**8.72.5.1706 unsigned short DCM::DeviceControl::InTS\_FEC\_Dec\_DefRuleSetting\_t::RowFEC-Offset**

Definition at line 19150 of file DCM.idl.

**8.72.5.1707 unsigned short DCM::DeviceControl::FEC\_Dec\_Status\_t::RowFEC\_Overhead**

in percentage fixed point 2 digit (x100)

Definition at line 19182 of file DCM.idl.

**8.72.5.1708 unsigned short DCM::DeviceControl::FEC\_Enc\_Overhead\_t::RowFEC\_Overhead**

in percentage fixed point 2 digit (x100), e.g. 10% -> 1000

Definition at line 19454 of file DCM.idl.

**8.72.5.1709 boolean DCM::DeviceControl::FEC\_Dec\_Status\_t::RowFEC\_Present**

Definition at line 19178 of file DCM.idl.

**8.72.5.1710 unsigned short DCM::DeviceControl::OutTS\_FEC\_Enc\_DefSetting\_t::RowFecOffset**

default value row offset = 4 (fixed for 4.0 release)

Definition at line 19416 of file DCM.idl.

**8.72.5.1711 unsigned long long DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::RS\_FEC\_Clean**

Number of clean RS blocks.

Definition at line 7124 of file DCM.idl.

**8.72.5.1712 unsigned long long DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::RS\_FEC\_Correctable**

Number of correctable RS FEC errors.

Definition at line 7122 of file DCM.idl.

**8.72.5.1713 unsigned long long DCM::DeviceControl::InPort\_8VSB\_Statistics\_t::RS\_FEC\_Uncorrectable**

Number of uncorrectable RS FEC errors.

Definition at line 7123 of file DCM.idl.

**8.72.5.1714 unsigned long long DCM::DeviceControl::InPort\_DvbS2\_Counters\_t::RS\_Uncorrected-Errors**

Definition at line 7592 of file DCM.idl.

Definition at line 7846 of file DCM.idl.

**8.72.5.1721 boolean DCM::DeviceControl::ScriptEntry\_t::Running**

Whether script is currently running.

Definition at line 31757 of file DCM.idl.

**8.72.5.1722 eRunningStatus DCM::DeviceControl::IPS\_SDT\_Data\_t::RunStatusIn**

RO provides running status of input.

Definition at line 4857 of file DCM.idl.

**8.72.5.1723 eRunningStatus DCM::DeviceControl::IPS\_SDT\_Data\_t::RunStatusOut**

RW (Transparent or configurable status)

Definition at line 4858 of file DCM.idl.

**8.72.5.1724 GbEFramesRecv\_t DCM::DeviceControl::GbEStatisticsEntry\_t::Rx**

Definition at line 19903 of file DCM.idl.

**8.72.5.1725 eDvbS2\_RxMode\_t DCM::DeviceControl::InPort\_DvbS2\_PortConfig\_t::RxMode**

single stream of multi-stream mode.

Definition at line 7387 of file DCM.idl.

**8.72.5.1726 SMX36\_PoolSafeRateMode\_e DCM::DeviceControl::SMX36\_Pool\_t::SafeRateMode**

Safe rate mode defines the rate the VSE must fall back on if communication fails to statmux controller.

Definition at line 23792 of file DCM.idl.

**8.72.5.1727 SMX36\_PoolSafeRateMode\_e DCM::DeviceControl::SMX36\_Pool\_V2\_t::SafeRateMode**

Safe rate mode defines the rate the VSE must fall back on if communication fails to statmux controller.

Definition at line 23812 of file DCM.idl.

**8.72.5.1728 BitRateSampleList\_t DCM::DeviceControl::ServiceBitRateSample\_t::Sample**

Definition at line 9840 of file DCM.idl.

Definition at line 11614 of file DCM.idl.

**8.72.5.1731** `unsigned long DCM::DeviceControl::DCG_AudioSignalInfo_t::SampleRate`

Sample rate (Hz)

Definition at line 31208 of file DCM.idl.

**8.72.5.1732** `unsigned long DCM::DeviceControl::InPort_DvbS2_TunerCfg_t::SatFrequency`

in KHz

Definition at line 7432 of file DCM.idl.

**8.72.5.1733** `enPSBSocketType DCM::DeviceControl::IpServiceDisplayData::SckType`

Tcp, udp, tcp6, udp6, ...

Definition at line 24639 of file DCM.idl.

**8.72.5.1734** `unsigned long DCM::DCM_Notifications::Output_TS_Change::ScrambableServices-Available`

when true, same as [DCM\\_TsIdOnIdChange](#)

Definition at line 32280 of file DCM.idl.

**8.72.5.1735** `unsigned short DCM::DeviceControl::ASI_DTF_Ex_t::ScramblingKeyIndex`

Index into the scrambling key list, should be less than 1024, used when not overridden by the global default.

Definition at line 22009 of file DCM.idl.

**8.72.5.1736** `eASI_DTF_ScramblingType DCM::DeviceControl::ASI_DTF_Ex_t::ScramblingType`

Input level scrambling type setting, used when not overridden by the global type.

Definition at line 22010 of file DCM.idl.

**8.72.5.1737** `unsigned long DCM::DeviceControl::ScriptEntry_t::ScriptId`

The Id assigned to this script.

Definition at line 31754 of file DCM.idl.

**8.72.5.1738** `string DCM::DeviceControl::ScriptEntry_t::ScriptName`

The unique name of the script.

Definition at line 31755 of file DCM.idl.

**8.72.5.1739** `unsigned short DCM::DeviceControl::ScriptEntry_t::ScriptVersion`

The version of the script, several versions of the same script can be installed.

Definition at line 31756 of file DCM.idl.

**8.72.5.1740 eScte35Source DCM::DeviceControl::Sete35Source\_t::Sete35Source**

The source of which the SCTE35 messages < should be processed.

Definition at line 17819 of file DCM.idl.

**8.72.5.1741 unsigned long DCM::DeviceControl::TC\_VideoEncodeSettings\_t::SD\_Bitrate**

1.0 - 3.5Mbps, in bps. (Used whenever the input is SD, even if HD\_Service is true).

Definition at line 13015 of file DCM.idl.

**8.72.5.1742 unsigned long DCM::DeviceControl::TC\_VideoSettings\_t::SD\_Bitrate**

1.0 - 3.5Mbps, in bps. (Used whenever the input is SD, even if HD\_Service is true).

The font ID to be used.

Definition at line 13961 of file DCM.idl.

**8.72.5.2050 unsigned short DCM::DeviceControl::BannerCfg\_t::TextHeight**

In pixels. Must be smaller or equal to BannerHeight.

Definition at line 13903 of file DCM.idl.

**8.72.5.2051 unsigned short DCM::DeviceControl::BannerCfg\_V2\_t::TextHeight**

In pixels. Must be smaller or equal to BannerHeight.

Definition at line 13965 of file DCM.idl.

**8.72.5.2052 unsigned short DCM::DeviceControl::BannerCfg\_t::TextLoopCount**

Number of times an banner should be displayed: loop count of 0 means animation is played continously, loop count of 3 means animation is played three times.

Definition at line 13905 of file DCM.idl.

**8.72.5.2053 unsigned short DCM::DeviceControl::BannerCfg\_V2\_t::TextLoopCount**

Number of times an banner should be displayed: loop count of 0 means animation is played continously, loop count of 3 means animation is played three times.

Definition at line 13967 of file DCM.idl.

**8.72.5.2054 unsigned short DCM::DeviceControl::BannerCfg\_t::TextMaxWidth**

In pixels. Must be smaller or equal to BannerWidth.

Definition at line 13904 of file DCM.idl.

**8.72.5.2055 unsigned short DCM::DeviceControl::BannerCfg\_V2\_t::TextMaxWidth**

In pixels. Must be smaller or equal to BannerWidth.

Definition at line 13966 of file DCM.idl.

**8.72.5.2056 unsigned short DCM::DeviceControl::BannerCfg\_t::TextOpacity**

10 \* opacity in % (e.g. OpacityX10 = 11 means an opacity of 1.1%), < 100% opaque means not transparent at all.

Definition at line 13901 of file DCM.idl.

**8.72.5.2057 unsigned short DCM::DeviceControl::BannerCfg\_V2\_t::TextOpacity**

10 \* opacity in % (e.g. OpacityX10 = 11 means an opacity of 1.1%), < 100% opaque means not transparent at all.

Definition at line 13963 of file DCM.idl.

**8.72.5.2058 long DCM::DeviceControl::BannerCfg\_t::TextSpeed**

Scrolling speed of the text in pixels/frame. Positive values scroll < from right to left, negative values from left to right.

Definition at line 13909 of file DCM.idl.

**8.72.5.2059 long DCM::DeviceControl::BannerCfg\_V2\_t::TextSpeed**

Scrolling speed of the text in pixels/frame. Positive values scroll < from right to left, negative values from left to right.

Definition at line 13971 of file DCM.idl.

**8.72.5.2060 PCTM\_ThresholdValues\_t DCM::DeviceControl::PCTM\_StreamThresholdSettings\_t::ThresholdValues**

Definition at line 20290 of file DCM.idl.

**8.72.5.2061 sequence<TierAC\_t> DCM::DeviceControl::TierData\_t::TierACLList**

Access criteria for tier.

Definition at line 27650 of file DCM.idl.

**8.72.5.2062 unsigned long DCM::DeviceControl::TierData\_t::TierId**

Tier identification.

Definition at line 27648 of file DCM.idl.

**8.72.5.2063 unsigned long DCM::DeviceControl::TS\_Tier\_t::TierId**

Definition at line 27657 of file DCM.idl.

**8.72.5.2064 string DCM::DeviceControl::TierData\_t::TierName**

Name for tier.

Definition at line 27649 of file DCM.idl.

**8.72.5.2065 long DCM::DeviceControl::Feature\_t::TimeLeft**

Definition at line 20544 of file DCM.idl.

**8.72.5.2066 unsigned long DCM::DeviceControl::GPI\_StatusControl\_t::TimeStamp**

gpi local timestamp, changed status (seconds since 00:00:00 UTC, January 1, 1970)

Definition at line 31591 of file DCM.idl.

**8.72.5.2067 unsigned long DCM::DeviceControl::GPI\_StatusControl\_t::TimeStampOffset**

offset in microseconds since TimeStamp

Definition at line 31593 of file DCM.idl.

**8.72.5.2068 string DCM::DeviceControl::OutTS\_SttTimeZone\_t::TimeZone**

Definition at line 8966 of file DCM.idl.

**8.72.5.2069 TOT\_Timezone\_List\_t DCM::DeviceControl::TS\_TOT\_Timezone\_t::Timezones**

Definition at line 2774 of file DCM.idl.

**8.72.5.2070 boolean DCM::DeviceControl::Scte35ToggleOutOfNetwork\_t::ToggleOutOfNetwork**

Set to True if the out\_of\_network\_indicator bit should be toggled.

Definition at line 17858 of file DCM.idl.

**8.72.5.2071 unsigned long DCM::DeviceControl::DPI\_ChannelSettings3\_t::ToInsertGpiNr**

Gpi pin used to switch to insertion.

Definition at line 17056 of file DCM.idl.

**8.72.5.2072 unsigned long DCM::DeviceControl::DPI\_ChannelSettings3\_t::ToMainGpiNr**

Gpi pin used to switch to main.

Definition at line 17057 of file DCM.idl.

**8.72.5.2073 SMX36\_ToS\_e DCM::DeviceControl::SMX36\_NetworkQoS\_t::ToS**

(mode ToS\_CoS\_Precedence) ToS value (not custom).

Definition at line 23644 of file DCM.idl.

**8.72.5.2074 unsigned short DCM::DeviceControl::OutTS\_TOS\_t::TOS\_Value**

Definition at line 18093 of file DCM.idl.

**8.72.5.2075 unsigned short DCM::DeviceControl::SMX36\_NetworkQoS\_t::ToSCustom**

(mode Custom) ToS custom value range [0-255].

Definition at line 23647 of file DCM.idl.

**8.72.5.2076 unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Total**

< Statistics about received frames

Total frames received

Definition at line 19856 of file DCM.idl.

**8.72.5.2077 unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Total**

< Statistics about transmitted frames

Total

Definition at line 19876 of file DCM.idl.

**8.72.5.2078 unsigned long DCM::DeviceControl::TR\_DelayMode\_t::TotalDelay**

Customized setting of the total delay of the transrater board.

Definition at line 14955 of file DCM.idl.

**8.72.5.2079 unsigned long DCM::DeviceControl::TR\_DelayMode\_V2\_t::TotalDelay**

Customized setting of the total delay of the transrater board.

Definition at line 14965 of file DCM.idl.

**8.72.5.2080 unsigned short DCM::DeviceControl::FEC\_Dec\_Status\_t::TotalOverhead**

in percentage fixed point 2 digit (x100)

Definition at line 19183 of file DCM.idl.

**8.72.5.2081 unsigned short DCM::DeviceControl::FEC\_Enc\_Overhead\_t::TotalOverhead**

in percentage fixed point 2 digit (x100), e.g. 10% -> 1000

Definition at line 19455 of file DCM.idl.

**8.72.5.2082 unsigned long long DCM::DeviceControl::InPort\_DvbS2\_Counters\_t::TotalPackets-Count**

Definition at line 7596 of file DCM.idl.

**8.72.5.2083 BitRateMeasurement\_t DCM::DeviceControl::TS\_BitRateMeasurement\_t::TotalRate**

Definition at line 9790 of file DCM.idl.

**8.72.5.2084 BitRateMeasurement\_t DCM::DeviceControl::TR\_BitRateMeasurement\_t::TotalRate**

Definition at line 9860 of file DCM.idl.

**8.72.5.2085 TrackingCriterium\_t DCM::DeviceControl::MergeCriterium\_t::TrackingCriterium**

Definition at line 5061 of file DCM.idl.

**8.72.5.2086 TrackingCriterium\_t DCM::DeviceControl::MFPB\_VideoDecode\_t::TrackingCriterium**

Definition at line 10681 of file DCM.idl.

Definition at line 11656 of file DCM.idl.

**8.72.5.2088 TrackingCriterium.t DCM::DeviceControl::TC\_VideoDecode\_t::TrackingCriterium**

Definition at line 13032 of file DCM.idl.

**8.72.5.2089 TrackingCriterium.t DCM::DeviceControl::TC\_Video\_t::TrackingCriterium**

Definition at line 13096 of file DCM.idl.

**8.72.5.2090 TrackingCriterium.t DCM::DeviceControl::TC\_Audio\_t::TrackingCriterium**

Definition at line 13152 of file DCM.idl.

**8.72.5.2091 TrackingCriterium.t DCM::DeviceControl::DescrTrackingRule\_t::TrackingCriterium**

Definition at line 28419 of file DCM.idl.

**8.72.5.2092 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_ServiceTrackingID\_t::TrackingID**

Definition at line 10553 of file DCM.idl.

**8.72.5.2093 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_Component\_t::TrackingId**

0 if the component matches no tracking criteria.

Definition at line 10560 of file DCM.idl.

**8.72.5.2094 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_VideoInformation\_t::TrackingId**

Definition at line 10646 of file DCM.idl.

**8.72.5.2095 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_VideoDecode\_t::TrackingId**

0 when creating a new entry

Definition at line 10680 of file DCM.idl.

**8.72.5.2096 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_VideoEncode\_t::TrackingId**

Must be equal to the tracking ID of a video decode.

Definition at line 11036 of file DCM.idl.

**8.72.5.2097 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_VideoEncodeV2\_t::TrackingId**

Must be equal to the tracking ID of a video decode.

Definition at line 11211 of file DCM.idl.

**8.72.5.2098 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_MultiResVideoEncode\_t::TrackingId**

Must be equal to the tracking ID of a video decode.

Definition at line 11371 of file DCM.idl.

**8.72.5.2099 MFPB\_TrackingID.t DCM::DeviceControl::MFPB\_AudioInformation\_t::TrackingId**

Definition at line 11621 of file DCM.idl.

**8.72.5.2100 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_AudioDecode\_t::TrackingId**

0 when creating a new entry

Definition at line 11655 of file DCM.idl.

**8.72.5.2101 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_AudioEncode\_t::TrackingId**

Must be equal to the tracking ID of a Audio decode.

Definition at line 11787 of file DCM.idl.

**8.72.5.2102 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_MPEGL2\_AudioSettings\_t::TrackingId**

Identifies the elementary streams encoder where the setting should be added to.

Definition at line 11864 of file DCM.idl.

**8.72.5.2103 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_AAC\_AudioSettings\_t::TrackingId**

Identifies the elementary streams encoder where the setting should be added to.

Definition at line 11953 of file DCM.idl.

**8.72.5.2104 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_t::TrackingId**

Identifies the elementary streams encoder where the setting should be added to.

Definition at line 12103 of file DCM.idl.

**8.72.5.2105 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_Dolby\_AudioSettings\_V2\_t::TrackingId**

Identifies the elementary streams encoder where the setting should be added to.

Definition at line 12251 of file DCM.idl.

**8.72.5.2106 MFPB\_TrackingID\_t DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Settings\_t::TrackingId**

Identifies the elementary streams encoder where the setting should be added to (.

Definition at line 29393 of file DCM.idl.

**8.72.5.2163 unsigned long DCM::DeviceControl::PortTsSvcProps\_t::TsProps**

Bit map of aggregated TS Properties on a port.

Bit mapping for input TS properties \* Bit 8: TRUE if UDP Stream Loss/ASI TS Sync Loss alarm is active. From V10.10 also if CC error is active (Mask: BITMAP\_INPUT\_TS\_ALARM\_ACTIVE) \* Bit 13: TRUE if TsLoss Alarm is active (backup trigger) (Mask: BITMAP\_INPUT\_TS\_TSLOSS\_ALARM\_ACTIVE)

For output TSs bitmap is zero

Definition at line 4632 of file DCM.idl.

**8.72.5.2164 IPS\_RefTS\_t DCM::DeviceControl::TR\_GroupSettings\_t::TSRef**

The output transport stream this group contains (parts of). It should be set to 0xFFFFFFFF in case of a MultiTS group.

Definition at line 14981 of file DCM.idl.

**8.72.5.2165 IPS\_RefTS\_t DCM::DeviceControl::TR\_TSSettings\_t::TSRef**

The output transport stream reference.

Definition at line 14989 of file DCM.idl.

**8.72.5.2166 IPS\_RefTS\_t DCM::DeviceControl::SMX\_MFP\_TsSettings\_t::TsRef**

Ref of the TS.

Definition at line 16178 of file DCM.idl.

**8.72.5.2167 IPS\_RefTS\_t DCM::DeviceControl::TR\_TsDelay\_t::TsRef**

The TS.

Definition at line 16912 of file DCM.idl.

**8.72.5.2168 IPS\_RefTS\_t DCM::DeviceControl::RipTsSettings\_t::TSRef**

TSRef of TS.

Definition at line 31999 of file DCM.idl.

**8.72.5.2169 IPS\_RefTS\_t DCM::DeviceControl::OutputTsLossTriggerPerTs\_t::TSRef**

TSRef of TS.

Definition at line 32060 of file DCM.idl.

**8.72.5.2170 IPS\_RefTS\_t DCM::DeviceControl::OutputTsLossTriggerBitmapPerTs\_t::TSRef**

TSRef of TS.

Definition at line 32126 of file DCM.idl.

Definition at line 23469 of file DCM.idl.

**8.72.5.2194 SMX36\_AlgorithmType.e DCM::DeviceControl::SMX36\_AlgorithmIdentifier\_t::Type**

Algorithm Type.

Definition at line 23884 of file DCM.idl.

**8.72.5.2195 unsigned short DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::uBitStreamID**

Bit Stream ID.

Definition at line 12680 of file DCM.idl.

**8.72.5.2196 unsigned short DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t::uCompressionBoost10**

Compression Boost times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in custom Dynamic Compression Mode, else ignored and set to 10 or 0 in case of DynComp\_None.

Definition at line 12552 of file DCM.idl.

**8.72.5.2197 unsigned short DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t::uCompressionCut10**

Compression Cut times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in custom Dynamic Compression Mode, else ignored and set to 10 or 0 in case of DynComp\_None.

Definition at line 12551 of file DCM.idl.

**8.72.5.2198 unsigned short DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t::uCompressionScalingFactor10**

For Future functionality. Compression Scaling factor times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in line and custom Dynamic Compression Mode.

Definition at line 12553 of file DCM.idl.

**8.72.5.2199 unsigned long DCM::DeviceControl::MFPB\_VideoEncoderTemplate\_t::uCustomHorizResolution**

Future usage: Custom horizontal resolution only used if enMFPB\_HorizResolution is.

Definition at line 10942 of file DCM.idl.

**8.72.5.2200 unsigned long DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::uCustomHorizResolution**

Range: [1920-96] Multiple of 16 or one of (1920,1440,1280,1080,960,800,720,640,544,528,480,400,352,320,240,208,176,160,

Definition at line 11349 of file DCM.idl.

**8.72.5.2201 unsigned long DCM::DeviceControl::MFPB\_VideoEncoderTemplate\_t::uCustomVertResolution**

Future usage: Custom vertical resolution only used if enMFPB\_VertResolution is.

Definition at line 10940 of file DCM.idl.

**8.72.5.2202 unsigned long DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t::uCustomVertResolution**

Range: [1080-96] Multiple of 16 or one of (1080,720,600,576,544,480,360,320,288,272,240,224,180,160)

Definition at line 11348 of file DCM.idl.

**8.72.5.2203 unsigned long DCM::DeviceControl::MFPB\_DD\_MetaStatus\_t::uDataRate**

Data Rate (bps)

Definition at line 12682 of file DCM.idl.

**8.72.5.2204 unsigned short DCM::DeviceControl::SMX36\_Community\_t::UdpPort**

Community communication port range: 1024 (0X400) .. 65535.

Definition at line 23675 of file DCM.idl.

**8.72.5.2205 unsigned short DCM::DeviceControl::SMX36\_Pool\_t::UdpPort**

RO UDP Port used to communicate to the SPS.

Definition at line 23784 of file DCM.idl.

**8.72.5.2206 unsigned short DCM::DeviceControl::SMX36\_Pool\_V2\_t::UdpPort**

RO UDP Port used to communicate to the SPS.

Definition at line 23804 of file DCM.idl.

**8.72.5.2207 unsigned short DCM::DeviceControl::EasConfig\_t::UdpPort**

UDP port number the EAS proxy is listening on. When not yet yet configured UdpPort will be 0, meaning that the EAS proxy is not listening on a socket. UdpPorts are unique per network interface.

Definition at line 28988 of file DCM.idl.

**8.72.5.2208 unsigned short DCM::DeviceControl::OutTS\_UdpSize\_t::UdpSize**

Definition at line 18410 of file DCM.idl.

**8.72.5.2209 unsigned long DCM::DeviceControl::GPS\_Settings\_t::ui1PPS\_SliceLevel**

value in mV, range 0..5000mV, steps of 50mV

Definition at line 29092 of file DCM.idl.

**8.72.5.2210 unsigned long DCM::DeviceControl::MIP\_Settings\_t::uiMaximumDelay**

value in 100ns, range 0..1s

Definition at line 29170 of file DCM.idl.

**8.72.5.2211 unsigned long DCM::DeviceControl::TrackingCriterium\_t::ulDescriptorTag**

Definition at line 5053 of file DCM.idl.

**8.72.5.2212** unsigned long DCM::DeviceControl::TR\_ResourceCountingSettings\_t::ulMaxAudio-Bitrate

in bps

Definition at line 14731 of file DCM.idl.

**8.72.5.2213** unsigned long DCM::DeviceControl::TR\_ResourceCountingSettings\_t::ulMaxHD - Bitrate

in bps

Definition at line 14730 of file DCM.idl.

**8.72.5.2214** unsigned long DCM::DeviceControl::TR\_ResourceCountingSettings\_t::ulMaxSD - Bitrate

in bps

Definition at line 14729 of file DCM.idl.

**8.72.5.2215** unsigned long long DCM::DeviceControl::GbEFramesTrans\_t::Underrun

Buffer underrun Following items are -- not to be used -- since they are not applicable in Full-Duplex mode while GbE always runs in Full-Duplex mode.

Definition at line 19889 of file DCM.idl.

**8.72.5.2216** unsigned long long DCM::DeviceControl::GbEFramesRecv\_t::Undersize

Undersized frames.

Definition at line 19872 of file DCM.idl.

**8.72.5.2217** string DCM::DeviceControl::MM\_TypeInfo::Unit

Definition at line 22602 of file DCM.idl.

**8.72.5.2218** string DCM::DeviceControl::MM\_TypeInfo\_V2::Unit

Definition at line 22619 of file DCM.idl.

**8.72.5.2219** unsigned short DCM::DeviceControl::RefProcessorEngineUnit\_t::UnitNr

The unit within a processing engine.

- Multi format processor (MFP) boards have 1 unit per processing engine. UnitNr should always be 0.

Definition at line 10337 of file DCM.idl.

**8.72.5.2220** boolean DCM::DeviceControl::TS\_AutoPassRulesDisableFlags::UnrefRuleDisabled

read-only; true = the unref PID rule is disabled by system; false = the unref PID rule can be configured by the user;

Definition at line 2870 of file DCM.idl.

**8.72.5.2221** boolean DCM::DeviceControl::Scte35Data\_Keyer\_config\_t::Update\_flag

Definition at line 8662 of file DCM.idl.

**8.72.5.2222 unsigned short DCM::DeviceControl::RipBoardSettings::UpdateInterval**

Update interval for RIP messages. Effective interval. Range [1, 300], default 30.

Definition at line 31935 of file DCM.idl.

**8.72.5.2223 unsigned long DCM::DeviceControl::NicTeam\_Settings::UpDelay**

Definition at line 2193 of file DCM.idl.

**8.72.5.2224 unsigned short DCM::DeviceControl::ForbiddenPidRange\_t::UpperPidValue**

Upper limit of the forbidden pid range (should be > LowerPidValue)

Definition at line 3723 of file DCM.idl.

**8.72.5.2225 string DCM::DeviceControl::LogoCfg\_t::UrlRemoteLogo**

URL to remote logo.

Some examles:

`http://ipV4/pathtologo`

•

`http://ipV4:80/pathtologo`

•

`http://`

• `[ipV6]/pathtologo`

`http://`

• `[ipV6]:port/pathtologo` URL of the remote logo. Not applicable if RemoteLogo is false.

Definition at line 13838 of file DCM.idl.

**8.72.5.2226 unsigned short DCM::DeviceControl::GPS\_Status\_t::us1PpsLevelMax**

Definition at line 29187 of file DCM.idl.

**8.72.5.2227 unsigned short DCM::DeviceControl::GPS\_Status\_t::us1PpsLevelMin**

Definition at line 29186 of file DCM.idl.

**8.72.5.2228 unsigned short DCM::DeviceControl::GPS\_Status\_t::us1PpsLevelSlice**

Definition at line 29188 of file DCM.idl.

**8.72.5.2229 unsigned short DCM::DeviceControl::EasConfig\_t::UsageBitmap**

(Read-only) bitmap showing the I/O boards using the proxy. bit0 = main board, bit1 = I/O board 1, bit2 = I/O board 2, etc.

Definition at line 29002 of file DCM.idl.

**8.72.5.2230 long DCM::DeviceControl::FeatureUsage\_t::UsageCount**

the number of licenses in use for this feature.

Definition at line 20698 of file DCM.idl.

**8.72.5.2231 unsigned short DCM::DeviceControl::TrackingCriterium\_t::usCasId**

Definition at line 5056 of file DCM.idl.

**8.72.5.2232 unsigned short DCM::DeviceControl::TR\_ResourceCountingLoads\_t::usCurrentLoad**  
in 0.01%

Definition at line 14738 of file DCM.idl.

Definition at line 23588 of file DCM.idl.

**8.72.5.2280 unsigned long DCM::DeviceControl::BoardBitrateThreshold::VideoBitrateThreshold**

Bitrate threshold for video PIDs - in bps.

Definition at line 22818 of file DCM.idl.

**8.72.5.2281 SMX36\_VSE\_Codec.e DCM::DeviceControl::SMX36\_VSE\_V3\_t::VideoCodecSetting**

RW, as set on GUI: a way to get valid ranges of min/maxbitrates and check that VSE is still set as expected.

Definition at line 24136 of file DCM.idl.

**8.72.5.2282 SMX36\_VSE\_Codec.e DCM::DeviceControl::SMX36\_VSE\_V4\_t::VideoCodecSetting**

RW, as set on GUI: a way to get valid ranges of min/maxbitrates and check that VSE is still set as expected.

Definition at line 24193 of file DCM.idl.

**8.72.5.2283 SMX36\_VSE\_Codec.e DCM::DeviceControl::SMX36\_VSE\_V3\_t::VideoCodecStatus**

new in V10.20 URC:

- string VideoSEClass from V2 is replaced by VideoCodecStatus and VideoFormatStatus enumerations. Depending on the enumeration, valid min/max range of default/min/max bitrate settings (params) can change.
- When VSE is not preconfigured and thus is a detected VSE, the Status will be copied on the settings.
- When a VSE is preconfigured, the Setting are set in the GUI and Status is Unknown (as VSE is offline).
- Setting can be changed at any time in the GUI.
- When setting does not match status and status is not Unknown (aka VSE is offline) an Alarm will be raised. RO, status as set on VSE: a way to get valid ranges of min/maxbitrates

Definition at line 24134 of file DCM.idl.

**8.72.5.2284 SMX36\_VSE\_Codec.e DCM::DeviceControl::SMX36\_VSE\_V4\_t::VideoCodecStatus**

new in V10.20 URC: See V3

RO, status as set on VSE: a way to get valid ranges of min/maxbitrates

Definition at line 24191 of file DCM.idl.

**8.72.5.2285 MFPB\_ComponentList\_t DCM::DeviceControl::MFPB\_ServiceComponents\_t::Video-Components**

The video pids which can be processed.

Definition at line 10567 of file DCM.idl.

**8.72.5.2286 MFPB\_VideoDecodeList\_t DCM::DeviceControl::MFPB\_VideoDecodeCfg\_t::Video-DecodeList**

Definition at line 10688 of file DCM.idl.

Read only Bitmap used by GUI to display specific icons.

Definition at line 24054 of file DCM.idl.

**8.72.5.2326 unsigned long DCM::DeviceControl::SMX36\_VSE\_V2\_t::VSE\_Property**

Read only Bitmap used by GUI to display specific icons.

Definition at line 24073 of file DCM.idl.

**8.72.5.2327 unsigned long DCM::DeviceControl::SMX36\_VSE\_V3\_t::VSE\_Property**

Read only Bitmap used by GUI to display specific icons.

Definition at line 24119 of file DCM.idl.

**8.72.5.2328 unsigned long DCM::DeviceControl::SMX36\_VSE\_V4\_t::VSE\_Property**

Read only Bitmap used by GUI to display specific icons.

Definition at line 24170 of file DCM.idl.

**8.72.5.2329 string DCM::DeviceControl::SMX36\_VSE\_t::VSEName**

RO VSEName of this Video encoding stream. MAX string length = 50.

Definition at line 24049 of file DCM.idl.

**8.72.5.2330 string DCM::DeviceControl::SMX36\_VSE\_V2\_t::VSEName**

RO VSEName of this Video encoding stream. MAX string length = 50.

Definition at line 24068 of file DCM.idl.

**8.72.5.2331 string DCM::DeviceControl::SMX36\_VSE\_V3\_t::VSEName**

RO VSEName of this Video encoding stream. MAX string length = 50, set upon [SMX36\\_VSE\\_Create\(\)](#)

Definition at line 24115 of file DCM.idl.

**8.72.5.2332 string DCM::DeviceControl::SMX36\_VSE\_V4\_t::VSEName**

RO VSEName of this Video encoding stream. MAX string length = 50, set upon [SMX36\\_VSE\\_Create\(\)](#)

Definition at line 24166 of file DCM.idl.

**8.72.5.2333 unsigned short DCM::DeviceControl::SMX36\_Pool\_t::VSEParticipants**

RO The number of VSE running in the pool.

Definition at line 23786 of file DCM.idl.

**8.72.5.2334 unsigned short DCM::DeviceControl::SMX36\_Pool\_V2\_t::VSEParticipants**

RO The number of VSE running in the pool.

Definition at line 23806 of file DCM.idl.

**8.72.5.2335 boolean DCM::DeviceControl::ETV\_EissFilter\_t::WhiteList**

if true, the filter list is a white list and others are blocked

Definition at line 17355 of file DCM.idl.

**8.72.5.2336 boolean DCM::DeviceControl::TC\_CaptionInfo\_t::WideAspectRatio**

1 means 16:9 format; 0 means 4:3 format

Definition at line 10178 of file DCM.idl.

**8.72.5.2337 unsigned short DCM::DeviceControl::SlateData\_t::Width**

Definition at line 10082 of file DCM.idl.

**8.72.5.2338 unsigned short DCM::DeviceControl::MFPB\_VideoResolution\_t::Width**

Definition at line 10603 of file DCM.idl.

**8.72.5.2339 unsigned short DCM::DeviceControl::TC\_VideoResolution\_t::Width**

Definition at line 13077 of file DCM.idl.

**8.72.5.2340 unsigned short DCM::DeviceControl::LogoCfg\_t::X\_Position**

X position in pixels (range [0, 1920]), left is 0.

Definition at line 13814 of file DCM.idl.

**8.72.5.2341 unsigned short DCM::DeviceControl::LogoCfg\_t::Y\_Position**

Y position in pixels (range [0, 1080]), top is 0.

Definition at line 13815 of file DCM.idl.

**8.72.5.2342 long DCM::DeviceControl::Time::Year**

From year 0 onwards.

Definition at line 458 of file DCM.idl.

## 8.73 IP Adapter SDI and RTP streams

This contains types, enums and methods to configure the TSs of the multiplexer part in the device.

Collaboration diagram for IP Adapter SDI and RTP streams:

### Classes

- struct `DCM::DeviceControl::DCG_InputTS_t`  
*Information of an incoming TS.*
- struct `DCM::DeviceControl::DCG_InputRTP_Stream_t`  
*Prior to version 9.10: Between 10 and 100 (default 60) A sequence of `DCG_InputTS_t` entries.*
- struct `DCM::DeviceControl::DCG_InputRTP_Stream_V2_t`  
*Prior to version 9.10: Between 10 and 100 (default 60)*
- struct `DCM::DeviceControl::DCG_InputRTP_Stream_V3_t`  
*Prior to version 9.10: Between 10 and 100 (default 60)*
- struct `DCM::DeviceControl::DCG_OutputTS_t`  
*Information-Settings of an outgoing TS.*
- struct `DCM::DeviceControl::DCG_OutputRTP_Stream_t`
- struct `DCM::DeviceControl::DCG_OutputRTP_V2_Stream_t`
- struct `DCM::DeviceControl::DCG_OutputGBE_t`
- struct `DCM::DeviceControl::DCG_OutputFecGBE_t`
- struct `DCM::DeviceControl::RoutingData_t`
- struct `DCM::DeviceControl::VideoSignalInfo_t`
- struct `DCM::DeviceControl::End2End_Delay_t`
- struct `DCM::DeviceControl::DCG_3D_pair_t`
- struct `DCM::DeviceControl::DCG_GeneratorConfig_t`
- struct `DCM::DeviceControl::DCG_AES_GeneratorConfig_t`
- struct `DCM::DeviceControl::NegotiatedGbePortSpeed_t`
- struct `DCM::DeviceControl::InTS_Statistic_t`
- struct `DCM::DeviceControl::InTS_AES_Statistic_t`
- struct `DCM::DeviceControl::DCG_StreamBackupParams_t`
- struct `DCM::DeviceControl::DCG_BackupStream_t`
- struct `DCM::DeviceControl::DCG_Possible3GBoardCfg_t`
- struct `DCM::DeviceControl::DCG_AudioPairInfo_t`
- struct `DCM::DeviceControl::DCG_AudioSignalInfo_t`  
*Describes the audio signal information.*
- struct `DCM::DeviceControl::DCG_CompressionEnable_t`
- struct `DCM::DeviceControl::DCG_VBI_Defs_t`
- struct `DCM::DeviceControl::DCG_JP2K_params_t`

- struct [DCM::DeviceControl::DCG\\_JP2K\\_params\\_V2\\_t](#)
- struct [DCM::DeviceControl::DCG\\_JP2K\\_params\\_V3\\_t](#)
- struct [DCM::DeviceControl::DCG\\_HitlessSwitchOverEnable\\_t](#)

### Typedefs

- typedef sequence< [DCG\\_InputTS\\_t](#) > [DCM::DeviceControl::DCG\\_InputTS\\_List\\_t](#)

## Functions

- void [DCM::DeviceControl::SDI\\_OutTS\\_ChangeL](#) (in IPS\_Ref\_t RefPhys, in DCG\_OutputTS\_List\_t OutputTSList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*Change the parameters of one or more existing outgoing SDI or AES streams.*
- DCG\_OutputTS\_List\_t [DCM::DeviceControl::SDI\\_OutTS\\_GetL](#) (in IPS\_Ref\_t RefPhys) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get a list of outgoing SDI or AES streams and their parameters.*
- void [DCM::DeviceControl::OutputRTP\\_StreamAddL](#) (in IPS\_Ref\_t RefPhys, in unsigned long Nbr-OutTS, out DCG\_OutputRTP\_StreamList\_t OutputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Create a number of output RTP streams on given Slot and Port based on the defined defaults (DCG\_OutDefaultsSet(), DCG\_OutDefaultsGet()).*
- void [DCM::DeviceControl::OutputRTP\\_StreamChangeL](#) (in IPS\_Ref\_t RefPhys, in DCG\_OutputRTP\_StreamList\_t OutputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*Change the parameters of one or more existing outgoing RTP streams.*
- void [DCM::DeviceControl::OutputRTP\\_V2\\_StreamChangeL](#) (in IPS\_Ref\_t RefPhys, in DCG\_OutputRTP\_V2\_StreamList\_t OutputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*This function is similar to [OutputRTP\\_StreamChangeL\(\)](#) above, except for the list of elements returned is not a list of [DCG\\_OutputRTP\\_Stream\\_t](#) but a list of [DCG\\_OutputRTP\\_V2\\_Stream\\_t](#) which differs in that the latter does not contain the destination UDP socket, but a contain an enum saying whether the associated GbE ports with this OutRTP is a pair or individual port.*
- DCG\_OutputRTP\_StreamList\_t [DCM::DeviceControl::OutputRTP\\_StreamGetL](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get a list of outgoing RTP streams and their parameters.*
- DCG\_OutputRTP\_V2\_StreamList\_t [DCM::DeviceControl::OutputRTP\\_V2\\_StreamGetL](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get a list of outgoing RTP streams and their parameters.*
- void [DCM::DeviceControl::OutputGBE\\_ChangeL](#) (in unsigned short Board, in DCG\_OutputGBE\_List\_t OutputGBE\_List) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*Change the parameters of one or more existing outgoing GBE streams.*
- DCG\_OutputGBE\_List\_t [DCM::DeviceControl::OutputGBE\\_GetL](#) (in unsigned short Board, in IPS\_RefTS\_List\_t RefTsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get a list of outgoing GBE streams and their parameters.*
- void [DCM::DeviceControl::OutputFecGBE\\_ChangeL](#) (in unsigned short Board, in DCG\_OutputFecGBE\_List\_t OutputFecGBE\_List) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)  
*Change the parameters of one or more existing outgoing FEC GBE streams.*
- DCG\_OutputFecGBE\_List\_t [DCM::DeviceControl::OutputFecGBE\\_GetL](#) (in unsigned short Board, in IPS\_RefTS\_List\_t RefTsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get a list of outgoing GBE streams and their parameters.*
- DCG\_InputTS\_List\_t [DCM::DeviceControl::SDI\\_InTS\\_GetL](#) (in IPS\_Ref\_t PhysRef) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get a list of incoming SDI streams.*

- void [DCM::DeviceControl::SDI\\_InTS\\_ChangeL](#) (in IPS\_Ref\_t RefPhys, in DCG\_InputTS\_List\_t InputTSList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Change the parameters of one or more existing input SDI streams.*

- void [DCM::DeviceControl::InputRTP\\_StreamChangeL](#) (in IPS\_Ref\_t RefPhys, in DCG\_InputRTP\_StreamList\_t InputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

*Change the parameters of one or more existing input RTP streams.*

- void [DCM::DeviceControl::InputRTP\\_StreamChangeL\\_V2](#) (in IPS\_Ref\_t RefPhys, in DCG\_InputRTP\_StreamList\_V2\_t InputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)
- void [DCM::DeviceControl::InputRTP\\_StreamChangeL\\_V3](#) (in IPS\_Ref\_t RefPhys, in DCG\_InputRTP\_StreamList\_V3\_t InputStreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

*Similar to the above, except the genlock value is specified in units of time.*

- DCG\_InputRTP\_StreamList\_t [DCM::DeviceControl::InputRTP\\_StreamGetL](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get a list of input RTP streams and their parameters.*

- DCG\_InputRTP\_StreamList\_V2\_t [DCM::DeviceControl::InputRTP\\_StreamGetL\\_V2](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- DCG\_InputRTP\_StreamList\_V3\_t [DCM::DeviceControl::InputRTP\\_StreamGetL\\_V3](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Similar to the above, except the genlock value is specified in units of time.*

- void [DCM::DeviceControl::DCG\\_ApplyRoutings](#) (in unsigned short SlotNumber, in RoutingData\_List\_t RoutingDataList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OutOfRange, OperationFailed)

*Add a routing source to a number of output transport streams.*

- void [DCM::DeviceControl::DCG\\_InTS\\_DeleteL](#) (in IPS\_Ref\_t RefPhys, in IPS\_RefTS\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Delete a list of input TSs.*

- void [DCM::DeviceControl::DCG\\_OutTS\\_DeleteL](#) (in IPS\_Ref\_t RefPhys, in IPS\_RefTS\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Delete a list of output TSs.*

- void [DCM::DeviceControl::GetVideoSignalInfos](#) (in unsigned short SlotNumber, in IPS\_RefTS\_List\_t RefList, out VideoSignalInfoList\_t SignalInfoList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the (video) signal information from an input SDI signal or from an input RTP transport stream.*

- void [DCM::DeviceControl::GetEndToEndDelaysL](#) (in unsigned short SlotNumber, in IPS\_RefTS\_List\_t RefList, out End2End\_DelayList\_t DelayList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the end to end delay that was introduced for an output transport stream.*

- void [DCM::DeviceControl::Pair3D\\_AddL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Add 3D pairs, given in a list.*

- void [DCM::DeviceControl::Out\\_Pair3D\\_AddL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

- void [DCM::DeviceControl::In\\_Pair3D\\_AddL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- void [DCM::DeviceControl::Pair3D\\_DeleteL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OperationFailed)

*Delete 3D pairs, given in a list.*

- void [DCM::DeviceControl::Out\\_Pair3D\\_DeleteL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OperationFailed)
- void [DCM::DeviceControl::In\\_Pair3D\\_DeleteL](#) (in unsigned short Board, in DCG\_3D\_pair\_List\_t l) raises (Timeout, OpNotSucceeded, OpNotAllowed, OperationFailed)
- DCG\_3D\_pair\_List\_t [DCM::DeviceControl::Pair3D\\_GetL](#) (in unsigned short Board) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get a list of 3d paired SDI streams input or output.*

- DCG\_3D\_pair\_List\_t [DCM::DeviceControl::Out\\_Pair3D\\_GetL](#) (in unsigned short Board) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- DCG\_3D\_pair\_List\_t [DCM::DeviceControl::In\\_Pair3D\\_GetL](#) (in unsigned short Board) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- void [DCM::DeviceControl::DCG\\_ASIG\\_Set\\_3D](#) (in unsigned short Board, in boolean enabled) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set stream 1 and 2 to 3D paired on an ASI board.*

- boolean [DCM::DeviceControl::DCG\\_ASIG\\_Get\\_3D](#) (in unsigned short Board) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get whether stream 1 and 2 is 3D paired on an ASI board.*

- void [DCM::DeviceControl::GetSDI\\_GeneratorConfigs](#) (in unsigned short BoardNbr, in IPS\_RefTS\_List\_t RefList, out DCG\_GeneratorConfigList\_t ConfigList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the list of available SDI test signal generators and their configuration Also returns the references for the SDI generators.*

- void [DCM::DeviceControl::SetSDI\\_GeneratorConfigs](#) (in unsigned short BoardNbr, in DCG\_GeneratorConfigList\_t ConfigList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Configure a number of SDI test signal generators.*

- void [DCM::DeviceControl::GetAES\\_GeneratorConfigs](#) (in unsigned short BoardNbr, in IPS\_RefTS\_List\_t RefList, out DCG\_AES\_GeneratorConfigList\_t ConfigList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the list of available AES test signal generators and their configuration Also returns the references for the AES generators.*

- void [DCM::DeviceControl::SetAES\\_GeneratorConfigs](#) (in unsigned short BoardNbr, in DCG\_AES\_GeneratorConfigList\_t ConfigList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Configure a number of AES test signal generators.*

- void [DCM::DeviceControl::NegotiatedGbePortSpeed\\_GetL](#) (in unsigned short BoardNumber, out NegotiatedGbePortSpeed\_List\_t NegotiatedGbePortSpeedList) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

*Retrieves the negotiated GbE port speeds for each GbE port.*

- void [DCM::DeviceControl::InTS\\_Statistic\\_GetL](#) (in unsigned short SlotNumber, in IPS\_RefTS\_List\_t RefList, out InTS\_Statistic\_List\_t StatisticList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Applicable for release 7.5.*

- void [DCM::DeviceControl::InTS\\_Statistic\\_Reset](#) (in unsigned short SlotNumber) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

*Applicable for release 7.5.*

- void [DCM::DeviceControl::InTS\\_AES\\_Statistic\\_GetL](#) (in unsigned short SlotNumber, in IPS\_RefTS\_List\_t RefList, out InTS\_AES\_Statistic\_List\_t StatisticList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Applicable for release 11.10.*

- void [DCM::DeviceControl::InTS\\_AES\\_Statistic\\_Reset](#) (in unsigned short SlotNumber) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

*Applicable for release 11.10.*

- void [DCM::DeviceControl::DCG\\_SetStreamBU\\_Params](#) (in IPS\_Ref\_t RefPhys, in DCG\_StreamBackupParamsList\_t StreamBackupParamsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the StreamBackup parameters for an output service.*

- DCG\_StreamBackupParamsList\_t [DCM::DeviceControl::DCG\\_GetStreamBU\\_Params](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the StreamBackup parameters for an output service.*

- void [DCM::DeviceControl::DCG\\_SetBU\\_Streams](#) (in IPS\_Ref\_t RefPhys, in DCG\_BackupStreamList\_t BU\_StreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the backup streams for each output stream.*

- DCG\_BackupStreamList\_t [DCM::DeviceControl::DCG\\_GetBU\\_Streams](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the configured main/backup pairs for the requested reference.*

- void [DCM::DeviceControl::DCG\\_SetActiveInputStream](#) (in IPS\_RefTS\_t OutStream, in IPS\_RefTS\_t ActiveInStream) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the active stream for the specified output.*

- void [DCM::DeviceControl::DCG\\_GetActiveInputStream](#) (in IPS\_RefTS\_t OutStream, out IPS\_RefTS\_t ActiveInStream) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the active stream for the specified output.*

- void [DCM::DeviceControl::BoardCfgSet3GTopology](#) (in unsigned short SlotNumber, in enDCG\_3G\_Topology\_t BoardCfg\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set IPGW board configuration for 3G streams.*

- void [DCM::DeviceControl::BoardCfgGet3GTopology](#) (in unsigned short SlotNumber, out enDCG\_3G\_Topology\_t BoardCfg\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get IPGW board configuration for 3G streams.*

- void [DCM::DeviceControl::GetPossible3GTopology](#) (in unsigned short SlotNumber, out DCG\_Possible3GBoardCfgList\_t BoardCfgList\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get a list of all board configurations and whether they can be applied or not.*

- void [DCM::DeviceControl::DCG\\_GetAudioSignalInfo](#) (in unsigned short BoardNr, in IPS\_RefTS\_List\_t RefList, out DCG\_AudioSignalInfoList\_t SignalInfoList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the (audio) signal information from an input AES signal.*

- void [DCM::DeviceControl::DCG\\_GetCompressionMode](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList, out DCG\_CompressionEnableList\_t CompressionEnableList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Gets the Compression setting for RTP streams.*
- void [DCM::DeviceControl::DCG\\_SetCompressionMode](#) (in IPS\_Ref\_t RefPhys, in DCG\_CompressionEnableList\_t CompressionEnableList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Sets the compression setting for RTP streams This function can be used for input as well as output streams.*
- void [DCM::DeviceControl::DCG\\_GetJP2K\\_Params](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList, out DCG\_JP2K\_paramsList\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Gets the JPEG2000 settings from an output JP2K stream.*
- void [DCM::DeviceControl::DCG\\_GetJP2K\\_Params\\_V2](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList, out DCG\_JP2K\_paramsList\_V2\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*This function is similar to [DCG\\_GetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_t but a list of DCG\_JP2K\_paramsList\_V2\_t which differs in that the latter have an extra tributary, bEnableVPS.*
- void [DCM::DeviceControl::DCG\\_GetJP2K\\_Params\\_V3](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList, out DCG\_JP2K\_paramsList\_V3\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*This function is similar to [DCG\\_GetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_V2\_t but a list of DCG\_JP2K\_paramsList\_V3\_t which differs in that the latter have an extra element, bSDI20BitAudio.*
- void [DCM::DeviceControl::DCG\\_SetJP2K\\_Params](#) (in IPS\_Ref\_t RefPhys, in DCG\_JP2K\_paramsList\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Sets the JPEG200 parameters for an output JP2K stream.*
- void [DCM::DeviceControl::DCG\\_SetJP2K\\_Params\\_V2](#) (in IPS\_Ref\_t RefPhys, in DCG\_JP2K\_paramsList\_V2\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*This function is similar to [DCG\\_SetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_t but a list of DCG\_JP2K\_paramsList\_V2\_t which differs in that the latter have an extra tributary, bEnableVPS.*
- void [DCM::DeviceControl::DCG\\_SetJP2K\\_Params\\_V3](#) (in IPS\_Ref\_t RefPhys, in DCG\_JP2K\_paramsList\_V3\_t JP2K\_paramsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*This function is similar to [DCG\\_SetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements input is not a list of DCG\_JP2K\_paramsList\_V2\_t but a list of DCG\_JP2K\_paramsList\_V3\_t which differs in that the latter have an extra element, bSDI20BitAudio.*
- void [DCM::DeviceControl::BoardCfgSetJP2KTopology](#) (in unsigned short SlotNumber, in enDCG\_JP2K\_Topology\_t JP2K\_BoardCfg) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Set JPEG 2000 board configuration.*
- void [DCM::DeviceControl::BoardCfgGetJP2KTopology](#) (in unsigned short SlotNumber, out enDCG\_JP2K\_Topology\_t JP2K\_BoardCfg) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Get JPEG 2000 board configuration.*
- void [DCM::DeviceControl::DCG\\_GetHitlessSwitchOverMode](#) (in IPS\_Ref\_t RefPhys, in Ref\_List\_t RefList, out DCG\_HitlessSwitchOverEnableList\_t HitlessSwitchOverEnableList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the HitlessSwitchOver setting for RTP streams.*

- void [DCM::DeviceControl::DCG\\_SetHitlessSwitchOverMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_HitlessSwitchOverEnable\\_List\\_t](#) HitlessSwitchOverEnableList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed, LicenseError)

*Sets the HitlessSwitchOver setting for RTP streams.*

## Variables

- const unsigned long [DCM::DeviceControl::DCG\\_BITMAP\\_OUTPUT\\_TS\\_RTP\\_ON](#) = 0x8
- const unsigned long [DCM::DeviceControl::DCG\\_BITMAP\\_OUTPUT\\_TS\\_VLAN\\_ON](#) = 0x10
- const unsigned long [DCM::DeviceControl::DCG\\_BITMAP\\_OUTPUT\\_TS\\_VBR\\_ON](#) = 0x20
- const unsigned long [DCM::DeviceControl::DCG\\_BITMAP\\_OUTPUT\\_TS\\_FEC\\_COL\\_PRESENT](#) = 0x200

*Will be set when FEC column stream is enabled.*

- const unsigned long [DCM::DeviceControl::DCG\\_BITMAP\\_OUTPUT\\_TS\\_FEC\\_ROW\\_PRESENT](#) = 0x400

*Will be set when FEC row stream is enabled.*

### 8.73.1 Detailed Description

This contains types, enums and methods to configure the TSs of the multiplexer part in the device.

### 8.73.2 Typedef Documentation

#### 8.73.2.1 typedef sequence<[DCG\\_3D\\_pair\\_t](#)> [DCM::DeviceControl::DCG\\_3D\\_pair\\_List\\_t](#)

Definition at line 30226 of file [DCM.idl](#).

#### 8.73.2.2 typedef sequence<[DCG\\_AES\\_GeneratorConfig\\_t](#)> [DCM::DeviceControl::DCG\\_AES\\_GeneratorConfigList\\_t](#)

Definition at line 30813 of file [DCM.idl](#).

#### 8.73.2.3 typedef unsigned long [DCM::DeviceControl::DCG\\_AudioID\\_t](#)

IDLs for implementing JPEG2000 functionality on the IP Gateway.

Definition at line 31171 of file [DCM.idl](#).

#### 8.73.2.4 typedef sequence<[DCG\\_AudioPairInfo\\_t](#)> [DCM::DeviceControl::DCG\\_AudioPairInfo\\_List\\_t](#)

Definition at line 31201 of file [DCM.idl](#).

#### 8.73.2.5 typedef sequence<[DCG\\_AudioSignalInfo\\_t](#)> [DCM::DeviceControl::DCG\\_AudioSignalInfoList\\_t](#)

Definition at line 31214 of file [DCM.idl](#).

#### 8.73.2.6 typedef sequence<[DCG\\_BackupStream\\_t](#)> [DCM::DeviceControl::DCG\\_BackupStreamList\\_t](#)

Definition at line 31039 of file [DCM.idl](#).

**8.73.2.7** `typedef sequence<DCG_CompressionEnable_t> DCM::DeviceControl::DCG_Compression-EnableList_t`

Definition at line 31252 of file DCM.idl.

**8.73.2.8** `typedef sequence<DCG_GeneratorConfig_t> DCM::DeviceControl::DCG_GeneratorConfig-List_t`

Definition at line 30744 of file DCM.idl.

**8.73.2.9** `typedef sequence<DCG_HitlessSwitchOverEnable_t> DCM::DeviceControl::DCG_Hitless-SwitchOverEnable_List_t`

Definition at line 31509 of file DCM.idl.

**8.73.2.10** `typedef sequence<DCG_InputRTP_Stream_t> DCM::DeviceControl::DCG_InputRTP_-StreamList_t`

Definition at line 30014 of file DCM.idl.

**8.73.2.11** `typedef sequence<DCG_InputRTP_Stream_V2_t> DCM::DeviceControl::DCG_InputRTP_-StreamList_V2_t`

A sequence of [DCG\\_InputTS\\_t](#) entries.

Definition at line 30038 of file DCM.idl.

**8.73.2.12** `typedef sequence<DCG_InputRTP_Stream_V3_t> DCM::DeviceControl::DCG_InputRTP_-StreamList_V3_t`

A sequence of [DCG\\_InputTS\\_t](#) entries.

Definition at line 30055 of file DCM.idl.

**8.73.2.13** `typedef sequence<DCG_InputTS_t> DCM::DeviceControl::DCG_InputTS_List_t`

A sequence of [DCG\\_InputTS\\_t](#) entries.

Definition at line 30000 of file DCM.idl.

**8.73.2.14** `typedef sequence<DCG_JP2K_params_t> DCM::DeviceControl::DCG_JP2K_paramsList_t`

Definition at line 31317 of file DCM.idl.

**8.73.2.15** `typedef sequence<DCG_JP2K_params_V2_t> DCM::DeviceControl::DCG_JP2K_params-List_V2_t`

Definition at line 31338 of file DCM.idl.

**8.73.2.16** `typedef sequence<DCG_JP2K_params_V3_t> DCM::DeviceControl::DCG_JP2K_params-List_V3_t`

Definition at line 31360 of file DCM.idl.

**8.73.2.17** `typedef sequence<DCG_OutputFecGBE_t> DCM::DeviceControl::DCG_OutputFecGBE_-List_t`

A sequence of [DCG\\_OutputFecGBE\\_t](#) entries.

Definition at line 30149 of file DCM.idl.

**8.73.2.18** `typedef sequence<DCG_OutputGBE_t> DCM::DeviceControl::DCG_OutputGBE_List_t`

A sequence of [DCG\\_OutputGBE\\_t](#) entries.

Definition at line 30140 of file DCM.idl.

**8.73.2.19** `typedef sequence<DCG_OutputRTP_Stream_t> DCM::DeviceControl::DCG_OutputRTP-StreamList_t`

A sequence of [DCG\\_OutputTS\\_t](#) entries.

Definition at line 30110 of file DCM.idl.

**8.73.2.20** `typedef sequence<DCG_OutputRTP_V2_Stream_t> DCM::DeviceControl::DCG_OutputRTP-V2_StreamList_t`

A sequence of [DCG\\_OutputRTP\\_V2\\_t](#) entries.

Definition at line 30129 of file DCM.idl.

**8.73.2.21** `typedef sequence<DCG_OutputTS_t> DCM::DeviceControl::DCG_OutputTS_List_t`

A sequence of [DCG\\_OutputTS\\_t](#) entries.

Definition at line 30101 of file DCM.idl.

**8.73.2.22** `typedef sequence<DCG_Possible3GBoardCfg_t> DCM::DeviceControl::DCG_Possible3G-BoardCfgList_t`

Definition at line 31121 of file DCM.idl.

**8.73.2.23** `typedef sequence<DCG_StreamBackupParams_t> DCM::DeviceControl::DCG_Stream-BackupParamsList_t`

Definition at line 30996 of file DCM.idl.

**8.73.2.24** `typedef sequence<unsigned short> DCM::DeviceControl::DCG_VBI_Lines_t`

Definition at line 31290 of file DCM.idl.

**8.73.2.25** `typedef sequence<End2End_Delay_t> DCM::DeviceControl::End2End_DelayList_t`

Definition at line 30219 of file DCM.idl.

**8.73.2.26** `typedef sequence<InTS_AES_Statistic_t> DCM::DeviceControl::InTS_AES_Statistic_List_t`

Definition at line 30941 of file DCM.idl.

**8.73.2.27** `typedef sequence<InTS_Statistic_t> DCM::DeviceControl::InTS_Statistic_List_t`

Definition at line 30899 of file DCM.idl.

**8.73.2.28** `typedef sequence<NegotiatedGbePortSpeed_t> DCM::DeviceControl::NegotiatedGbePort-Speed_List_t`

Definition at line 30865 of file DCM.idl.

**8.73.2.29 typedef sequence<RoutingData\_t> DCM::DeviceControl::RoutingDataList\_t**

A sequence of [IPS\\_OutPID\\_Data\\_t](#).

Definition at line 30158 of file DCM.idl.

**8.73.2.30 typedef sequence<VideoSignalInfo\_t> DCM::DeviceControl::VideoSignalInfoList\_t**

Definition at line 30211 of file DCM.idl.

**8.73.3 Enumeration Type Documentation****8.73.3.1 enum DCM::DeviceControl::eAES\_SampleRate\_t**

Enumerator:

*eAES\_SampleRate\_48kHz*  
*eAES\_SampleRate\_Reserved1* Future use.  
*eAES\_SampleRate\_Reserved2* Future use.  
*eAES\_SampleRate\_Reserved3* Future use.

Definition at line 30777 of file DCM.idl.

**8.73.3.2 enum DCM::DeviceControl::eAES\_WaveMode\_t**

Enumerator:

*eAES\_WaveMode\_PureTone*  
*eAES\_WaveMode\_Reserved1* Future use.  
*eAES\_WaveMode\_Reserved2* Future use.  
*eAES\_WaveMode\_Reserved3* Future use.

Definition at line 30785 of file DCM.idl.

**8.73.3.3 enum DCM::DeviceControl::eAES\_WaveModeDetail\_t**

Enumerator:

*eAES\_PureTone\_Silence*  
*eAES\_PureTone\_100Hz*  
*eAES\_PureTone\_500Hz*  
*eAES\_WaveModeDetail\_Reserved1* Future use.  
*eAES\_WaveModeDetail\_Reserved2* Future use.  
*eAES\_WaveModeDetail\_Reserved3* Future use.

Definition at line 30793 of file DCM.idl.

Enumerator:

*e4\_3*  
*e16\_9*

*eI4\_9*

*eNot\_Available*

*eAspectRatio\_Reserved2* Future use.

*eAspectRatio\_Reserved3* Future use.

*eAspectRatio\_Reserved4* Future use.

*eAspectRatio\_Reserved5* Future use.

Definition at line 30176 of file DCM.idl.

#### 8.73.3.5 enum DCM::DeviceControl::eDCG\_StreamBackupMode\_t

IDLs for implementing Stream backup on the IP Adapter.

Enumerator:

*eNonRevertive*

*eRevertive*

*eFloating*

*eReserved1*

*eReserved2*

*eReserved3*

*eReserved4*

*eReserved5*

Definition at line 30976 of file DCM.idl.

#### 8.73.3.6 enum DCM::DeviceControl::eDCG\_StreamingState

Describes if the TS is streaming or not.

Enumerator:

*DCG\_Streaming\_Active*

*DCG\_Streaming\_Paused*

*eDCG\_Streaming\_Reserved1* Future use.

*eDCG\_Streaming\_Reserved2* Future use.

*eDCG\_Streaming\_Reserved3* Future use.

Definition at line 30059 of file DCM.idl.

#### 8.73.3.7 enum DCM::DeviceControl::eFrameBuildUp\_t

Enumerator:

*eProgressive*

*eInterlaced*

*eFrameBuildUp\_Reserved1* Future use.

*eFrameBuildUp\_Reserved2* Future use.

*eFrameBuildUp\_Reserved3* Future use.

Definition at line 30188 of file DCM.idl.

**8.73.3.8 enum DCM::DeviceControl::eFrameRate\_t**

Enumerator:

*e24fps*  
*e25fps*  
*e30fps*  
*e50fps*  
*e60fps*  
*e29\_97fps*  
*e59\_94fps*  
*eDCG\_FramerRate\_Reserved1* Future use.  
*eDCG\_FramerRate\_Reserved2* Future use.  
*eDCG\_FramerRate\_Reserved3* Future use.  
*eDCG\_FramerRate\_Reserved4* Future use.  
*eDCG\_FramerRate\_Reserved5* Future use.

Definition at line 30160 of file DCM.idl.

**8.73.3.9 enum DCM::DeviceControl::eGbePortType\_t**

Enumerator:

*eGbePort\_PairType* All configuration values like: TTL, TOS, VLAN, srcAddr (source socket) and destination socket are the same for the two GbE ports. Values configured for GbE0 are also used for GbE1.  
*eGbePort\_IndividualType* All configuration values as mentioned above are individual for for each GbE port.

Definition at line 30113 of file DCM.idl.

**8.73.3.10 enum DCM::DeviceControl::enDCG\_3G\_Topology\_t**

Enumerator:

*eNo3G*  
*eOne3G*  
*eTwo3G*  
*eThree3G*  
*eReserved\_DCG\_3G\_1*  
*eReserved\_DCG\_3G\_2*  
*eReserved\_DCG\_3G\_3*

Definition at line 31105 of file DCM.idl.

**8.73.3.11 enum DCM::DeviceControl::enDCG\_AudioResolution\_t**

Enumerator:

*eDCG\_AudioResolution\_20bit*  
*eDCG\_AudioResolution\_24bit*

*eDCG\_AudioResolution\_Invalid*  
*eReserved\_AudioResolution1*

Definition at line 31181 of file DCM.idl.

#### 8.73.3.12 enum DCM::DeviceControl::enDCG\_AudioStatus\_t

Describes Status of an audio channel (left or right).

Enumerator:

*eAudioSt\_NotPresent*  
*eAudioSt\_Present*  
*eAudioSt\_Error*

Definition at line 31174 of file DCM.idl.

#### 8.73.3.13 enum DCM::DeviceControl::enDCG\_CompressionMode\_t

Enumerator:

*eUncompressed*  
*eEnableJP2K*  
*eCompressionEnable\_Reserved1*  
*eCompressionEnable\_Reserved2*  
*eCompressionEnable\_Reserved3*  
*eCompressionEnable\_Reserved4*

Definition at line 31236 of file DCM.idl.

#### 8.73.3.14 enum DCM::DeviceControl::enDCG\_HitlessSwitchOverMode\_t

Enumerator:

*eDisableHitlessSwitchOver*  
*eEnableHitlessSwitchOver*  
*eHitlessReserved1*  
*eHitlessReserved2*  
*eHitlessReserved3*  
*eHitlessReserved4*

Definition at line 31486 of file DCM.idl.

#### 8.73.3.15 enum DCM::DeviceControl::enDCG\_JP2K\_CompressionMode\_t

Enumerator:

*e9\_7*  
*e5\_3*  
*eJP2K\_CompressionMode\_Reserved*

Definition at line 31283 of file DCM.idl.

**8.73.3.16 enum DCM::DeviceControl::enDCG\_JP2K\_Topology\_t**

Enumerator:

*e3Dec\_3Enc*  
*e3Dec*  
*e3Enc*  
*e6Dec*  
*e6Enc*  
*eTopology\_JP2K\_Reserved1*  
*eTopology\_JP2K\_Reserved2*  
*eTopology\_JP2K\_Reserved3*  
*eTopology\_JP2K\_Reserved4*  
*eTopology\_JP2K\_Reserved5*  
*eTopology\_JP2K\_Reserved6*

Definition at line 31439 of file DCM.idl.

**8.73.3.17 enum DCM::DeviceControl::eNegotiatedGbePortSpeed\_t**

Enumerator:

*ePortSpeed\_NotAvailable*  
*ePortSpeed\_10Mbs*  
*ePortSpeed\_100Mbs*  
*ePortSpeed\_1Gbps*  
*ePortSpeed\_10Gbps*  
*ePortSpeed\_Reserved1*  
*ePortSpeed\_Reserved2*

Definition at line 30848 of file DCM.idl.

**8.73.3.18 enum DCM::DeviceControl::eSDI\_ColorOutputMode\_t**

Enumerator:

*eOM\_Static*  
*eOM\_RGB\_Cycling*  
*eOM\_Reserved1* Future use.  
*eOM\_Reserved2* Future use.  
*eOM\_Reserved3* Future use.

Definition at line 30723 of file DCM.idl.

**8.73.3.19 enum DCM::DeviceControl::eSDI\_GeneratorMode\_t**

Enumerator:

*e3G\_1080P\_60*  
*e3G\_1080P\_59\_94*

*e3G\_1080P\_50*  
*eHD\_1080P\_30*  
*eHD\_1080P\_29\_97*

*eHD\_720P\_60*  
*eHD\_720P\_59\_94*  
*eHD\_720P\_50*  
*eHD\_1080I\_30*  
*eHD\_1080I\_29\_97*  
*eHD\_1080I\_25*  
*eSD\_525I\_29\_97*  
*eSD\_625I\_25* (default)  
*eSDI\_GeneratorMode\_Reserved1* Future use.  
*eSDI\_GeneratorMode\_Reserved2* Future use.  
*eSDI\_GeneratorMode\_Reserved3* Future use.

Definition at line 30702 of file DCM.idl.

#### 8.73.3.20 enum DCM::DeviceControl::eTxClockingMode\_t

Describes the output clocking mode when RTP is routed to SDI.

Enumerator:

*eFreeRunning*  
*eAdaptiveRecovery*  
*eGenLocked*

Definition at line 30017 of file DCM.idl.

#### 8.73.3.21 enum DCM::DeviceControl::eVideoFormat\_t

Enumerator:

*eSD*  
*eHD*  
*e3G*  
*eAES*  
*eVideoFormat\_Reserved1* Future use.  
*eVideoFormat\_Reserved2* Future use.  
*eVideoFormat\_Reserved3* Future use.

Definition at line 29965 of file DCM.idl.

## 8.73.4 Function Documentation

**8.73.4.1** void DCM::DeviceControl::BoardCfgGet3GTopology ( in unsigned short *SlotNumber*, out enDCG\_3G\_Topology\_t *BoardCfg\_3G* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get IPGW board configuration for 3G streams.

## Parameters

|     |                    |                                                |
|-----|--------------------|------------------------------------------------|
| in  | <i>SlotNumber</i>  | Slot number                                    |
| out | <i>BoardCfg_3G</i> | The allowed number of 3G streams on the board. |

## Exceptions

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of                                                                              |

## Version

Release 8.1

**8.73.4.2** void DCM::DeviceControl::BoardCfgGetJP2KTopology ( in unsigned short *SlotNumber*, out enDCG\_JP2K\_Topology\_t *JP2K\_BoardCfg* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get JPEG 2000 board configuration.

## Parameters

|     |                       |                                      |
|-----|-----------------------|--------------------------------------|
| in  | <i>SlotNumber</i>     | Slot number                          |
| out | <i>JP2K_Board-Cfg</i> | The topology of the JPEG 2000 board. |

## Exceptions

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of                                                                              |

## Version

Release 8.1

**8.73.4.3** void DCM::DeviceControl::BoardCfgSet3GTopology ( in unsigned short *SlotNumber*, in enDCG\_3G\_Topology\_t *BoardCfg\_3G* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Set IPGW board configuration for 3G streams.

**Parameters**

|    |                    |                                                          |
|----|--------------------|----------------------------------------------------------|
| in | <i>SlotNumber</i>  | Slot number                                              |
| in | <i>BoardCfg_3G</i> | Specifies the allowed number of 3G streams on the board. |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of                                                                              |

**Note**

- Switching speed mode will cause a firmware reset and thus is service affecting !!

**Version**

Release 8.1

**8.73.4.4** void DCM::DeviceControl::BoardCfgSetJP2KTopology ( in unsigned short *SlotNumber*, in enDCG\_JP2K\_Topology\_t *JP2K\_BoardCfg* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Set JPEG 2000 board configuration.

**Parameters**

|    |                       |                                                |
|----|-----------------------|------------------------------------------------|
| in | <i>SlotNumber</i>     | Slot number                                    |
| in | <i>JP2K_Board-Cfg</i> | Specifies the topology of the JPEG 2000 board. |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of                                                                              |

**Note**

- Switching speed mode will cause a firmware reset and thus is service affecting !!

**Version**

Release 8.1

**8.73.4.5** void DCM::DeviceControl::DCG\_ApplyRoutings ( in unsigned short *SlotNumber*, in RoutingDataList\_t *RoutingDataList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OutOfRange, OperationFailed)

Add a routing source to a number of output transport streams.

**Parameters**

|    |                         |                                                        |
|----|-------------------------|--------------------------------------------------------|
| in | <i>SlotNumber</i>       | The SlotNumber of which parameters need to be changed. |
| in | <i>RoutingData-List</i> | List of <a href="#">RoutingData_t</a> entries.         |

**Exceptions**

|                       |                                                                                                                                                                                            |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Timeout</i>        | A timeout occurred during IIOP processing                                                                                                                                                  |
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                                                   |
| <i>OpNotAllowed</i>   | Not logged in                                                                                                                                                                              |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references for output or input references</li> <li>Inconsistency between SlotNumber &amp; RoutingDataList SlotNumber.</li> </ul> |
| <i>LicenseError</i>   | If there are insufficient licenses.                                                                                                                                                        |
| <i>OutOfRange</i>     | Not enough output bandwidth to complete routing.                                                                                                                                           |

**Version**

Release 7.0

**8.73.4.6** `boolean DCM::DeviceControl::DCG_ASIG_Get_3D ( in unsigned short Board )` raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get whether stream 1 and 2 is 3D paired on an ASI board.

This is a board level configuration

**Parameters**

|    |              |  |
|----|--------------|--|
| in | <i>Board</i> |  |
|----|--------------|--|

**Returns**

boolean

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
|-----------------------|-----------------------------------------------------------------------------------------|

**Version**

Release 8.7

**8.73.4.7** `void DCM::DeviceControl::DCG_ASIG_Set_3D ( in unsigned short Board, in boolean enabled )` raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Set stream 1 and 2 to 3D paired on an ASI board.

This is a board level configuration

**Parameters**

|    |                |         |
|----|----------------|---------|
| in | <i>Board</i>   |         |
| in | <i>enabled</i> | boolean |

**Returns****Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
|-----------------------|-----------------------------------------------------------------------------------------|

**Version**

Release 8.7

**8.73.4.8** void DCM::DeviceControl::DCG\_GetActiveInputStream ( in IPS\_RefTS\_t *OutStream*, out IPS\_RefTS\_t *ActiveInStream* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get the active stream for the specified output.

**Parameters**

|     |                       |                                                        |
|-----|-----------------------|--------------------------------------------------------|
| in  | <i>OutStream</i>      | Output stream for which to set the active input stream |
| out | <i>ActiveInStream</i> | Active input stream                                    |

**Exceptions**

|                       |                                                                                                                                                                                |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                                                                                        |
| <i>OpNotSucceeded</i> | in case of <ul style="list-style-type: none"> <li>Invalid OutStream reference (BoardNr, PortNr, TS)</li> <li>Invalid ActiveInStream reference (BoardNr, PortNr, TS)</li> </ul> |

**Version**

Release 7.5

**8.73.4.9** void DCM::DeviceControl::DCG\_GetAudioSignalInfo ( in unsigned short *BoardNr*, in IPS\_RefTS\_List\_t *RefList*, out DCG\_AudioSignalInfoList\_t *SignalInfoList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the (audio) signal information from an input AES signal.

**Parameters**

|     |                       |                                                                     |
|-----|-----------------------|---------------------------------------------------------------------|
| in  | <i>BoardNr</i>        | specifies slot number                                               |
| in  | <i>RefList</i>        | when empty, the audio signal info for ALL valid inputs's are given. |
| out | <i>SignalInfoList</i> | the returned audio signal information                               |

**Exceptions**

|                        |                                               |
|------------------------|-----------------------------------------------|
| <i>OpNotSupported</i>  | When BoardNr is not an IP Audio Gateway board |
| <i>OpNotSucceeded</i>  | In case of invalid input references           |
| <i>OperationFailed</i> |                                               |

**Version**

Release 11.10

**8.73.4.10** `DCG_BackupStreamList_t DCM::DeviceControl::DCG_GetBU_Streams ( in IPS_Ref_t RefPhys, in Ref_List_t RefList )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get the configured main/backup pairs for the requested reference.

**Parameters**

|    |                |                                                                                                                             |
|----|----------------|-----------------------------------------------------------------------------------------------------------------------------|
| in | <i>RefPhys</i> | specifies BoardNr and PortNr <ul style="list-style-type: none"> <li>wildcard for port allowed with empty RefList</li> </ul> |
| in | <i>RefList</i> | List of (output) references for which to get the backup streams                                                             |

**Returns**

DCG\_BackupStreamList\_t, a sequence of [DCG\\_BackupStream\\_t](#) entries holding main/backup pairs as specified in RefList.

**Exceptions**

|                       |                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                        |
| <i>OpNotSucceeded</i> | in case of <ul style="list-style-type: none"> <li>Invalid OutStream reference (BoardNr, PortNr, TS)</li> </ul> |

**Version**

Release 7.5

**8.73.4.11** `void DCM::DeviceControl::DCG_GetCompressionMode ( in IPS_Ref_t RefPhys, in Ref_List_t RefList, out DCG_CompressionEnableList_t CompressionEnableList )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the Compression setting for RTP streams.

**Parameters**

|     |                               |                                                                |
|-----|-------------------------------|----------------------------------------------------------------|
| in  | <i>RefPhys</i>                | specifies slot number                                          |
| in  | <i>RefList</i>                | when empty, the compression setting for all streams are given. |
| out | <i>Compression-EnableList</i> | The returned compression setting                               |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of invalid references for RTP stream                                            |

**Version**

Release 8.1

**8.73.4.12** void DCM::DeviceControl::DCG\_GetHitlessSwitchOverMode ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList*, out DCG\_HitlessSwitchOverEnable\_List\_t *HitlessSwitchOverEnableList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the HitlessSwitchOver setting for RTP streams.

**Parameters**

|     |                                     |                                                                      |
|-----|-------------------------------------|----------------------------------------------------------------------|
| in  | <i>RefPhys</i>                      | specifies slot number                                                |
| in  | <i>RefList</i>                      | when empty, the HitlessSwitchOver setting for all streams are given. |
| out | <i>HitlessSwitch-OverEnableList</i> | returns HitlessSwitchOver settings                                   |

**Exceptions**

|                       |                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Adapter or IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of Invalid references for RTP stream                                                          |

**Version**

Release 8.1

**8.73.4.13** void DCM::DeviceControl::DCG\_GetJP2K\_Params ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList*, out DCG\_JP2K\_paramsList\_t *JP2K\_paramsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the JPEG2000 settings from an output JP2K stream.

**Parameters**

|     |                         |                                                                          |
|-----|-------------------------|--------------------------------------------------------------------------|
| in  | <i>RefPhys</i>          | specifies slot number                                                    |
| in  | <i>RefList</i>          | when empty, the JPEG2000 settings for ALL JP2K output streams are given. |
| out | <i>JP2K_params-List</i> | The returned JPEG2000 settings                                           |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of Invalid references for JP2K stream                                           |

**Version**

Release 8.1

**8.73.4.14** void DCM::DeviceControl::DCG\_GetJP2K\_Params\_V2 ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList*, out DCG\_JP2K\_paramsList\_V2\_t *JP2K\_paramsList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

This function is similar to [DCG\\_GetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_t but a list of DCG\_JP2K\_paramsList\_V2\_t which differs in that the latter have an extra tributry, bEnableVPS.

Except for this all other things are equal.

**Version**

Release 8.7

**8.73.4.15** void DCM::DeviceControl::DCG\_GetJP2K\_Params\_V3 ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList*, out DCG\_JP2K\_paramsList\_V3\_t *JP2K\_paramsList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

This function is similar to [DCG\\_GetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_V2\_t but a list of DCG\_JP2K\_paramsList\_V3\_t which differs in that the latter have an extra element, bSDI20BitAudio.

Except for this all other things are equal.

**Parameters**

|     |                         |                                                                          |
|-----|-------------------------|--------------------------------------------------------------------------|
| in  | <i>RefPhys</i>          | specifies slot number                                                    |
| in  | <i>RefList</i>          | when empty, the JPEG2000 settings for ALL JP2K output streams are given. |
| out | <i>JP2K_params-List</i> | The returned JPEG2000 settings                                           |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of Invalid references for JP2K stream                                           |

**Version**

Release 11.10

**8.73.4.16** DCG\_StreamBackupParamsList\_t DCM::DeviceControl::DCG\_GetStreamBU\_Params ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get the StreamBackup parameters for an output service.

**Parameters**

|    |                |                                                                                                                             |
|----|----------------|-----------------------------------------------------------------------------------------------------------------------------|
| in | <i>RefPhys</i> | specifies BoardNr and PortNr <ul style="list-style-type: none"> <li>wildcard for port allowed with empty RefList</li> </ul> |
| in | <i>RefList</i> | List of (output) references for which to get the parameters                                                                 |

**Returns**

DCG\_StreamBackupParamsList\_t, a sequence of [DCG\\_StreamBackupParams\\_t](#) entries as specified in RefList.

**Exceptions**

|                       |                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                        |
| <i>OpNotSucceeded</i> | in case of <ul style="list-style-type: none"> <li>Invalid OutStream reference (BoardNr, PortNr, TS)</li> </ul> |

**Version**

Release 7.5

**8.73.4.17** void DCM::DeviceControl::DCG\_InTS\_DeleteL ( in IPS\_Ref\_t *RefPhys*, in IPS\_RefTS\_List\_t *RefList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Delete a list of input TSs.

**Parameters**

|    |                |                                                                                      |
|----|----------------|--------------------------------------------------------------------------------------|
| in | <i>RefPhys</i> | BoardNr & PortNr where TSs need to be deleted.                                       |
| in | <i>RefList</i> | list of <a href="#">IPS_RefTS_t</a> , references to the TSs that need to be deleted. |

**Exceptions**

|                       |                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                                                                                                                                                                                                         |
| <i>OpNotSucceeded</i> | In case <ul style="list-style-type: none"> <li>Invalid references are used (RefPhys, RefList).</li> <li>Inconsistency between RefPhys.BoardNr &amp; RefList[x].BoardNr.</li> <li>Inconsistency between RefPhys.PortNr &amp; RefList[x].PortNr in case RefPhys.PortNr != 0xFFFF.</li> <li>The requested TS has a route to an output TS</li> </ul> |

**Note**

- When called on an SDI board, a new TS is created for the ports where the TS is deleted

**Version**

Release 7.0

**8.73.4.18** void DCM::DeviceControl::DCG\_OutTS\_DeleteL ( in IPS\_Ref\_t *RefPhys*, in IPS\_RefTS\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Delete a list of output TSs.

**Parameters**

|    |                |                                                                                      |

**Version**

Release 7.5

**8.73.4.21** void DCM::DeviceControl::DCG\_SetCompressionMode ( in IPS\_Ref\_t *RefPhys*, in DCG\_CompressionEnableList\_t *CompressionEnableList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Sets the compression setting for RTP streams This function can be used for input as well as output streams.

For input streams, when enabling compression, if the dejitter buffer was set to less than 7. it will be changed to 7.

**Parameters**

|     |                               |                                     |
|-----|-------------------------------|-------------------------------------|
| in  | <i>RefPhys</i>                | Specifies slot number               |
| out | <i>Compression-EnableList</i> | List of compression settings to set |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of invalid references for RTP streams                                           |

**Version**

Release 8.1

**8.73.4.22** void DCM::DeviceControl::DCG\_SetHitlessSwitchOverMode ( in IPS\_Ref\_t *RefPhys*, in DCG\_HitlessSwitchOverEnable\_List\_t *HitlessSwitchOverEnableList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed, LicenseError)

Sets the HitlessSwitchOver setting for RTP streams.

**Parameters**

|     |                                    |                                           |
|-----|------------------------------------|-------------------------------------------|
| in  | <i>RefPhys</i>                     | Specifies slot number                     |
| out | <i>HitlessSwitchOverEnableList</i> | List of HitlessSwitchOver settings to set |

**Exceptions**

|                       |                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Adapter or IP Audio Gateway.                                          |
| <i>OpNotSucceeded</i> | In case of Invalid references for RTP streams                                                                                                  |
| <i>LicenseError</i>   | - When the appropriate license is not installed <ul style="list-style-type: none"> <li>• Not enough licenses of this type available</li> </ul> |

**Version**

Release 8.1

**8.73.4.23** void DCM::DeviceControl::DCG\_SetJP2K\_Params ( in IPS\_Ref\_t *RefPhys*, in DCG\_JP2K\_paramsList\_t *JP2K\_paramsList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Sets the JPEG200 parameters for an output JP2K stream.

**Parameters**

|     |                        |                                  |
|-----|------------------------|----------------------------------|
| in  | <i>RefPhys</i>         | Specifies slot number            |
| out | <i>JP2K_paramsList</i> | List of JPEG2000 settings to set |

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
| <i>OpNotSucceeded</i> | In case of Invalid references for JP2K streams                                          |

**Version**

Release 8.1

**8.73.4.24** void DCM::DeviceControl::DCG\_SetJP2K\_Params\_V2 ( in IPS\_Ref\_t *RefPhys*, in DCG\_JP2K\_paramsList\_V2\_t *JP2K\_paramsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

This function is similar to [DCG\\_SetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of DCG\_JP2K\_paramsList\_t but a list of DCG\_JP2K\_paramsList\_V2\_t which differs in that the latter have an extra tributary, bEnableVPS.

Except for this all other things are equal.

**Version**

Release 8.7

**8.73.4.25** void DCM::DeviceControl::DCG\_SetJP2K\_Params\_V3 ( in IPS\_Ref\_t *RefPhys*, in DCG\_JP2K\_paramsList\_V3\_t *JP2K\_paramsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

This function is similar to [DCG\\_SetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements input is not a list of DCG\_JP2K\_paramsList\_V2\_t but a list of DCG\_JP2K\_paramsList\_V3\_t which differs in that the latter have an extra element, bSDI20BitAudio.

Except for this all other things are equal.

**Version**

Release 11.10

**8.73.4.26** void DCM::DeviceControl::DCG\_SetStreamBU\_Params ( in IPS\_Ref\_t *RefPhys*, in DCG\_StreamBackupParamsList\_t *StreamBackupParamsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Sets the StreamBackup parameters for an output service.

**Parameters**

|    |                                |                                                                |
|----|--------------------------------|----------------------------------------------------------------|
| in | <i>RefPhys</i>                 | specifies BoardNr and PortNr                                   |
| in | <i>StreamBackup-ParamsList</i> | specifies BU-parameters for the referenced output stream (Ref) |

**Exceptions**

|                       |                                                                                                                                                                          |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                                                                                  |
| <i>OpNotSucceeded</i> | in case of <ul style="list-style-type: none"> <li>Invalid OutStream reference (BoardNr, PortNr, TS)</li> <li>Invalid mode specified in the StreamBackupParams</li> </ul> |

**Version**

Release 8.0

**8.73.4.27** void DCM::DeviceControl::GetAES\_GeneratorConfigs ( in unsigned short *BoardNbr*, in IPS\_RefTS\_List\_t *RefList*, out DCG\_AES\_GeneratorConfigList\_t *ConfigList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the list of available AES test signal generators and their configuration Also returns the references for the AES generators.

These should be used to configure and route them later !! To route a generator signal, the DCG\_Apply-Routings call should be used just as for any other routing.

**Parameters**

|     |                   |                                                                                                                  |
|-----|-------------------|------------------------------------------------------------------------------------------------------------------|
| in  | <i>BoardNbr</i>   | specifies slot number                                                                                            |
| in  | <i>RefList</i>    | when empty, configuration info for ALL generators are given. (first call when you don't know the references yet. |
| out | <i>ConfigList</i> | The returned list of the AES test sigal generators and their configurations.                                     |

**Exceptions**

|                       |                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Audio Gateway board.          |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references for generators</li> </ul> |

**Version**

Release 11.10

**8.73.4.28** void DCM::DeviceControl::GetEndToEndDelaysL ( in unsigned short *SlotNumber*, in IPS\_RefTS\_List\_t *RefList*, out End2End\_DelayList\_t *DelayList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the end to end delay that was introduced for an output transport stream.

**Parameters**

|     |                   |                                                        |
|-----|-------------------|--------------------------------------------------------|
| in  | <i>SlotNumber</i> | specifies slot number                                  |
| in  | <i>RefList</i>    | when empty, the end2end delays for ALL TS's are given. |
| out | <i>DelayList</i>  | The returned end to end delays                         |

**Exceptions**

|                       |                                                                                                              |
|-----------------------|--------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.     |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references for output transport streams</li> </ul> |

## Version

Release 7.0

**8.73.4.29** void DCM::DeviceControl::GetPossible3GTopology ( in unsigned short *SlotNumber*, out DCG\_Possible3GBoardCfgList\_t *BoardCfgList\_3G* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of all board configurations and whether they can be applied or not.

## Parameters

|     |                        |                                               |
|-----|------------------------|-----------------------------------------------|
| in  | <i>SlotNumber</i>      | The IPGW board to retrieve the settings from. |
| out | <i>BoardCfgList_3G</i> | A list of all board configurations.           |

## Exceptions

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
|-----------------------|-----------------------------------------------------------------------------------------|

## Version

Release 8.1

**8.73.4.30** void DCM::DeviceControl::GetSDI\_GeneratorConfigs ( in unsigned short *BoardNbr*, in IPS\_RefTS\_List\_t *RefList*, out DCG\_GeneratorConfigList\_t *ConfigList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the list of available SDI test signal generators and their configuration Also returns the references for the SDI generators.

These should be used to configure and route them later !! To route a generator signal, the DCG\_Apply-Routings call should be used just as for any other routing.

## Parameters

|     |                   |                                                                                                                  |
|-----|-------------------|------------------------------------------------------------------------------------------------------------------|
| in  | <i>BoardNbr</i>   | specifies slot number                                                                                            |
| in  | <i>RefList</i>    | when empty, configuration info for ALL generators are given. (first call when you don't know the references yet. |
| out | <i>ConfigList</i> | The returned list of the SDI test sigal generators and their configurations.                                     |

## Exceptions

|                       |                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.        |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references for generators</li> </ul> |

## Version

Release 7.0

**8.73.4.31** void DCM::DeviceControl::GetVideoSignalInfos ( in unsigned short *SlotNumber*, in IPS\_RefTS\_List\_t *RefList*, out VideoSignalInfoList\_t *SignalInfoList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Gets the (video) signal information from an input SDI signal or from an input RTP transport stream.

## Parameters

|     |                       |                                                                         |
|-----|-----------------------|-------------------------------------------------------------------------|
| in  | <i>SlotNumber</i>     | specifies slot number                                                   |
| in  | <i>RefList</i>        | when empty, the video signal info for ALL valid SDI inputs's are given. |
| out | <i>SignalInfoList</i> | The returned video signal information                                   |

## Exceptions

|                       |                                                                                                                                                                         |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                                                                                 |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references for input references</li> <li>The RefList is specifying an SDI stream that is not valid</li> </ul> |

## Version

Release 7.0

**8.73.4.32** void DCM::DeviceControl::In\_Pair3D\_AddL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

**8.73.4.33** void DCM::DeviceControl::In\_Pair3D\_DeleteL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OperationFailed)

**8.73.4.34** DCG\_3D\_pair\_List\_t DCM::DeviceControl::In\_Pair3D\_GetL ( in unsigned short *Board* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

**8.73.4.35** void DCM::DeviceControl::InputRTP\_StreamChangeL ( in IPS\_Ref\_t *RefPhys*, in DCG\_InputRTP\_StreamList\_t *InputStreamList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Change the parameters of one or more existing input RTP streams.

Note that an input RTP stream co-exists with an input TS. Only when an input TS is created, an input stream is available.

## Parameters

|    |                        |                                                                   |
|----|------------------------|-------------------------------------------------------------------|
| in | <i>RefPhys</i>         | The SlotNumber and PortNr of which parameters need to be changed. |
| in | <i>InputStreamList</i> | List of <a href="#">DCG_InputRTP_Stream_V2_t</a> entries.         |

**Exceptions**

|                       |                                                                                                                                                                                                                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                                                                                                                                                          |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>• Invalid references (RefPhys).</li> <li>• Inconsistency between RefPhys.BoardNr &amp; InputTSList[x].Ref.BoardNr.</li> <li>• Inconsistency between RefPhys.PortNr &amp; InputTSList[x].Ref.PortNr in case RefPhys.PortNr != 0xFFFF.</li> </ul> |

**Version**

Release 7.0

**8.73.4.36** void DCM::DeviceControl::InputRTP\_StreamChangeL\_V2 ( in IPS\_Ref\_t *RefPhys*, in DCG\_InputRTP\_StreamList\_V2\_t *InputStreamList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

**8.73.4.37** void DCM::DeviceControl::InputRTP\_StreamChangeL\_V3 ( in IPS\_Ref\_t *RefPhys*, in DCG\_InputRTP\_StreamList\_V3\_t *InputStreamList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Similar to the above, except the genlock value is specified in units of time.

**Version**

Release 8.7

**8.73.4.38** DCG\_InputRTP\_StreamList\_t DCM::DeviceControl::InputRTP\_StreamGetL ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of input RTP streams and their parameters.

**Parameters**

|    |                |                                                    |
|----|----------------|----------------------------------------------------|
| in | <i>RefPhys</i> | The BoardNr and PortNr you want information about. |
| in | <i>RefList</i> | A sequence of Ref's you want info about.           |

**Returns**

DCG\_InputRTP\_StreamList\_V2\_t, a sequence of [DCG\\_InputRTP\\_Stream\\_V2\\_t](#) entries.

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case invalid references (RefPhys, RefList) are used.                                                  |

**Note**

- A value of 0xFFFF for port means all ports.
- An empty list means all refs.

**Version**

Release 7.0

**8.73.4.39** DCG\_InputRTP\_StreamList\_V2\_t DCM::DeviceControl::InputRTP\_StreamGetL\_V2 ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

**8.73.4.40** DCG\_InputRTP\_StreamList\_V3\_t DCM::DeviceControl::InputRTP\_StreamGetL\_V3 ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Similar to the above, except the genlock value is specified in units of time.

**Version**

Release 8.7

**8.73.4.41** void DCM::DeviceControl::InTS\_AES\_Statistic\_GetL ( in unsigned short *SlotNumber*, in IPS\_RefTS\_List\_t *RefList*, out InTS\_AES\_Statistic\_List\_t *StatisticList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Applicable for release 11.10.

Get the parity and CRC error statistics for the RefTS given in RefList.

**Parameters**

|     |                      |                                                                       |
|-----|----------------------|-----------------------------------------------------------------------|
| in  | <i>SlotNumber</i>    | which specifies the board to access                                   |
| in  | <i>RefList</i>       | : The list for which to get statistics for - or ALL if empty.         |
| out | <i>StatisticList</i> | : The list of statistic structures for the TS's specified in RefList. |

**Exceptions**

|                       |                                                                                       |
|-----------------------|---------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Audio Gateway board. |
|-----------------------|---------------------------------------------------------------------------------------|

**8.73.4.42** void DCM::DeviceControl::InTS\_AES\_Statistic\_Reset ( in unsigned short *SlotNumber* ) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

Applicable for release 11.10.

Reset statistics which can be retrieved by [InTS\\_AES\\_Statistic\\_GetL\(\)](#).

**Parameters**

|    |                   |                                     |
|----|-------------------|-------------------------------------|
| in | <i>SlotNumber</i> | which specifies the board to access |
|----|-------------------|-------------------------------------|

**Exceptions**

|                       |                                                                                       |
|-----------------------|---------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Audio Gateway board. |
|-----------------------|---------------------------------------------------------------------------------------|

**8.73.4.43** void DCM::DeviceControl::InTS\_Statistic\_GetL ( in unsigned short *SlotNumber*, in IPS\_RefTS\_List\_t *RefList*, out InTS\_Statistic\_List\_t *StatisticList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Applicable for release 7.5.

Get the statistics for the RefTS given in RefList.

**Parameters**

|     |                      |                                                                       |
|-----|----------------------|-----------------------------------------------------------------------|
| in  | <i>SlotNumber</i>    | which specifies the board to access                                   |
| in  | <i>RefList</i>       | : The list for which to get statistics for - or ALL if empty.         |
| out | <i>StatisticList</i> | : The list of statistic structures for the TS's specified in RefList. |

**Exceptions**

|                       |                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway. |
|-----------------------|-----------------------------------------------------------------------------------|

**8.73.4.44** void DCM::DeviceControl::InTS\_Statistic\_Reset ( in unsigned short *SlotNumber* ) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

Applicable for release 7.5.

Reset statistics which can be retrieved by [InTS\\_Statistic\\_GetL\(\)](#).

**Parameters**

|    |                   |                                     |
|----|-------------------|-------------------------------------|
| in | <i>SlotNumber</i> | which specifies the board to access |
|----|-------------------|-------------------------------------|

**Exceptions**

|                       |                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway. |
|-----------------------|-----------------------------------------------------------------------------------|

**8.73.4.45** void DCM::DeviceControl::NegotiatedGbePortSpeed\_GetL ( in unsigned short *BoardNumber*, out NegotiatedGbePortSpeed\_List\_t *NegotiatedGbePortSpeedList* ) raises (Timeout, OpNotAllowed, OpNotSupported, OperationFailed)

Retrieves the negotiated GbE port speeds for each GbE port.

This method should be called whenever the 'Link Status' of a GbE port has changed, because that is the only occasion when the negotiated speed can change. The speed is 'ePortSpeed\_NotAvailable' when autonegotiation is set to DISABLED.

**Parameters**

|     |                                   |                                                                                                   |
|-----|-----------------------------------|---------------------------------------------------------------------------------------------------|
| in  | <i>BoardNumber</i>                |                                                                                                   |
| out | <i>NegotiatedGbePortSpeedList</i> | The negotiated speed for each GbE port. The first item in the list applies to the first GbE port. |

## Exceptions

|                        |                                                            |
|------------------------|------------------------------------------------------------|
| <i>OpNotSupported</i>  | When the specified board is not an IP Audio Gateway board. |
| <i>OperationFailed</i> |                                                            |

## Version

Release 11.10

- 8.73.4.46** void DCM::DeviceControl::Out\_Pair3D\_AddL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- 8.73.4.47** void DCM::DeviceControl::Out\_Pair3D\_DeleteL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OperationFailed)
- 8.73.4.48** DCG\_3D\_pair\_List\_t DCM::DeviceControl::Out\_Pair3D\_GetL ( in unsigned short *Board* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)
- 8.73.4.49** void DCM::DeviceControl::OutputFecGBE\_ChangeL ( in unsigned short *Board*, in DCG\_OutputFecGBE\_List\_t *OutputFecGBE\_List* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Change the parameters of one or more existing outgoing FEC GBE streams.

## Parameters

|    |                          |                                                                                                                                                                                                                                                                                             |
|----|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in | <i>Board</i>             | The BoardNr for which parameters need to be changed.                                                                                                                                                                                                                                        |
| in | <i>OutputFecGBE_List</i> | List of <a href="#">DCG_OutputFecGBE_t</a> entries. Each entry configure the destination UDP socket on a (stream,GbE port) basis. Note: The destination UDP socket value set by this function for GbE0, i.e. port=0 and in - OutputFEC_StreamChangeL() is two ways of doing the same thing. |

## Exceptions

|                       |                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board or when board is not an IP Video Gateway board.                             |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references OutputFecGBE_List[].RefTS</li> </ul> |

## Version

Release 8.9

- 8.73.4.50** DCG\_OutputFecGBE\_List\_t DCM::DeviceControl::OutputFecGBE\_GetL ( in unsigned short *Board*, in IPS\_RefTS\_List\_t *RefTsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of outgoing GBE streams and their parameters.

## Parameters

|    |                  |                                            |
|----|------------------|--------------------------------------------|
| in | <i>Board</i>     |                                            |
| in | <i>RefTsList</i> | A sequence of RefTS's you want info about. |

**Returns**

DCG\_OutputFecGBE\_List\_t, a sequence of [DCG\\_OutputFecGBE\\_t](#) entries.

Note: For each element in 'RefList' there will be two values in the returned list, one for each GbE port.

**Exceptions**

|                       |                                                                               |
|-----------------------|-------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board or when board is not an IP Video Gateway board. |
| <i>OpNotSucceeded</i> | In case invalid references RefList are used.                                  |

**Note**

- An empty list means all refs.

**Version**

Release 8.9

**8.73.4.51** void DCM::DeviceControl::OutputGBE\_ChangeL ( in unsigned short *Board*, in DCG\_OutputGBE\_List\_t *OutputGBE\_List* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Change the parameters of one or more existing outgoing GBE streams.

**Parameters**

|    |                       |                                                                                                                                                                                                                                                                                                                                       |
|----|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in | <i>Board</i>          | The BoardNr for which parameters need to be changed.                                                                                                                                                                                                                                                                                  |
| in | <i>OutputGBE_List</i> | List of <a href="#">DCG_OutputGBE_t</a> entries. Each entry configure the destination UDP socket on a (stream,GbE port) basis. This is for hitless unicast. - Note: The destination UDP socket value set by this function for GbE0, i.e. port=0 and in <a href="#">OutputRTP_StreamChangeL()</a> is two ways of doing the same thing. |

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>• Invalid references OutputGBE_List[].RefTS</li> </ul> |

**Version**

Release 8.7

**8.73.4.52** DCG\_OutputGBE\_List\_t DCM::DeviceControl::OutputGBE\_GetL ( in unsigned short *Board*, in IPS\_RefTS\_List\_t *RefTsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of outgoing GBE streams and their parameters.

**Parameters**

|    |                  |                                            |
|----|------------------|--------------------------------------------|
| in | <i>Board</i>     |                                            |
| in | <i>RefTsList</i> | A sequence of RefTS's you want info about. |

**Returns**

DCG\_OutputGBE\_List\_t, a sequence of [DCG\\_OutputGBE\\_t](#) entries.

Note: For each element in 'RefList' there will be two values in the returned list, one for each GbE port.

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case invalid references RefList are used.                                                             |

**Note**

- An empty list means all refs.

**Version**

Release 8.7

**8.73.4.53** void DCM::DeviceControl::OutputRTP\_StreamAddL ( in IPS\_Ref\_t *RefPhys*, in unsigned long *NbrOutTS*, out DCG\_OutputRTP\_StreamList\_t *OutputStreamList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Create a number of output RTP streams on given Slot and Port based on the defined defaults (DCG\_OutDefaultsSet(), DCG\_OutDefaultsGet()).

Only meant to be used on an output Gbe port.

**Parameters**

|     |                         |                                                                         |
|-----|-------------------------|-------------------------------------------------------------------------|
| in  | <i>RefPhys</i>          | The SlotNumber and PortNr on which Streams need to be added.            |
| in  | <i>NbrOutTS</i>         | The number of streams to create.                                        |
| out | <i>OutputStreamList</i> | A list tih NbrOutTS elements that contains info on the created streams. |

**Exceptions**

|                       |                                                                                                                                                         |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>• Invalid references (RefPhys).</li> <li>• Maximum number of supported streams is reached.</li> </ul> |

**Version**

Release 7.0

**8.73.4.54** void DCM::DeviceControl::OutputRTP\_StreamChangeL ( in IPS\_Ref\_t *RefPhys*, in DCG\_OutputRTP\_StreamList\_t *OutputStreamList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Change the parameters of one or more existing outgoing RTP streams.

Note that an outgoing RTP stream co-exists with an output TS. Only when an output TS is created, an output stream is available.

**Parameters**

|    |                         |                                                                   |
|----|-------------------------|-------------------------------------------------------------------|
| in | <i>RefPhys</i>          | The SlotNumber and PortNr of which parameters need to be changed. |
| in | <i>OutputStreamList</i> | List of <a href="#">DCG_OutputRTP_Stream_t</a> entries.           |

**Exceptions**

|                       |                                                                                                                                                                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                                                                                                                                                      |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references (RefPhys).</li> <li>Inconsistency between RefPhys.BoardNr &amp; OutputTSList[x].Ref.BoardNr.</li> <li>Inconsistency between RefPhys.PortNr &amp; OutputTSList[x].Ref.PortNr in case RefPhys.PortNr != 0xFFFF.</li> </ul> |

**Version**

Release 7.0

**8.73.4.55** DCG\_OutputRTP\_StreamList\_t DCM::DeviceControl::OutputRTP\_StreamGetL ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of outgoing RTP streams and their parameters.

**Parameters**

|    |                |                                                    |
|----|----------------|----------------------------------------------------|
| in | <i>RefPhys</i> | The BoardNr and PortNr you want information about. |
| in | <i>RefList</i> | A sequence of Ref's you want info about.           |

**Returns**

DCG\_OutputRTP\_StreamList\_t, a sequence of [DCG\\_OutputRTP\\_Stream\\_t](#) entries.

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case invalid references (RefPhys, RefList) are used.                                                  |

**Note**

- A value of 0xFFFF for port means all ports.
- An empty list means all refs.

**Version**

Release 7.0

**8.73.4.56** void DCM::DeviceControl::OutputRTP\_V2\_StreamChangeL ( in IPS\_Ref\_t *RefPhys*, in DCG\_OutputRTP\_V2\_StreamList\_t *OutputStreamList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

This function is similar to [OutputRTP\\_StreamChangeL\(\)](#) above, except for the list of elements returned is not a list of [DCG\\_OutputRTP\\_Stream\\_t](#) but a list of [DCG\\_OutputRTP\\_V2\\_Stream\\_t](#) which differs in that the latter does not contain the destination UDP socket, but a contain an enum saying whether the associated GbE ports with this OutRTP is a pair or individual port.

Except for this all other things are equal.

**Version**

Release 8.7

**8.73.4.57** DCG\_OutputRTP\_V2\_StreamList\_t DCM::DeviceControl::OutputRTP\_V2\_StreamGetL ( in IPS\_Ref\_t *RefPhys*, in Ref\_List\_t *RefList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of outgoing RTP streams and their parameters.

**Parameters**

|    |                |                                                    |
|----|----------------|----------------------------------------------------|
| in | <i>RefPhys</i> | The BoardNr and PortNr you want information about. |
| in | <i>RefList</i> | A sequence of Ref's you want info about.           |

**Returns**

DCG\_OutputRTP\_V2\_StreamList\_t, a sequence of [DCG\\_OutputRTP\\_V2\\_Stream\\_t](#) entries.

**Exceptions**

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case invalid references (RefPhys, RefList) are used.                                                  |

**Note**

- A value of 0xFFFF for port means all ports.
- An empty list means all refs.

**Version**

Release 8.7

**8.73.4.58** void DCM::DeviceControl::Pair3D\_AddL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Add 3D pairs, given in a list.

**Parameters**

|    |              |                                                      |
|----|--------------|------------------------------------------------------|
| in | <i>Board</i> |                                                      |
| in | <i>l</i>     | a sequence of <a href="#">DCG_3D_pair_t</a> entries. |

**Exceptions**

|                       |                                                                                                                                     |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board.                                             |
| <i>OpNotAllowed</i>   | When stream that can not be paired is tried to. Only InSDI streams can be paired to each other, and similar to OutSDI.              |
| <i>OpNotAllowed</i>   | When some streams become member of more than one pair.                                                                              |
| <i>OpNotSucceeded</i> | When some in streams does not have there expected video type set to HD.                                                             |
| <i>OpNotSucceeded</i> | When some out streams that is ready route, is routen from a source streams which does not have there expected video type set to HD. |

**Version**

Release 8.7

**8.73.4.59** void DCM::DeviceControl::Pair3D\_DeleteL ( in unsigned short *Board*, in DCG\_3D\_pair\_List\_t *l* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OperationFailed)

Delete 3D pairs, given in a list.

**Parameters**

|    |              |                                                      |
|----|--------------|------------------------------------------------------|
| in | <i>Board</i> |                                                      |
| in | <i>l</i>     | a sequence of <a href="#">DCG_3D_pair_t</a> entries. |

**Exceptions**

|                       |                                                |
|-----------------------|------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board.                 |
| <i>OpNotAllowed</i>   | When trying to delere pairs that do not exist. |

**Version**

Release 8.7

**8.73.4.60** DCG\_3D\_pair\_List\_t DCM::DeviceControl::Pair3D\_GetL ( in unsigned short *Board* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of 3d paired SDI streams input or output.

**Parameters**

|           |              |  |
|-----------|--------------|--|
| <i>in</i> | <i>Board</i> |  |
|-----------|--------------|--|

**Returns**

DCG\_3D\_pair\_List\_t, a sequence of [DCG\\_3D\\_pair\\_t](#) entries.

**Exceptions**

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway board. |
|-----------------------|-----------------------------------------------------------------------------------------|

**Version**

Release 8.7

**8.73.4.61** void DCM::DeviceControl::SDI\_InTS\_ChangeL ( in IPS\_Ref\_t *RefPhys*, in DCG\_InputTS\_List\_t *InputTSList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Change the parameters of one or more existing input SDI streams.

**Parameters**

|           |                    |                                                                |
|-----------|--------------------|----------------------------------------------------------------|
| <i>in</i> | <i>RefPhys</i>     | The BoardNr and PortNr of which parameters need to be changed. |
| <i>in</i> | <i>InputTSList</i> | List of <a href="#">DCG_InputTS_t</a> entries.                 |

**Exceptions**

|                       |                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board or when board is not an IP Video Gateway or IP Audio Gateway board.                                                                                                                                                                                                                                              |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>Invalid references (RefPhys).</li> <li>Inconsistency between RefPhys.BoardNr &amp; InputTSList[x].Ref.BoardNr.</li> <li>Inconsistency between RefPhys.PortNr &amp; InputTSList[x].Ref.PortNr in case RefPhys.PortNr != 0xFFFF.</li> <li>Out of range values (DejitterBufferSize).</li> </ul> |

**Version**

Release 7.0

**8.73.4.62** DCG\_InputTS\_List\_t DCM::DeviceControl::SDI\_InTS\_GetL ( in IPS\_Ref\_t *PhysRef* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of incoming SDI streams.

**Parameters**

|    |                |                                                           |
|----|----------------|-----------------------------------------------------------|
| in | <i>PhysRef</i> | The BoardNr and PortNr of which you want the information. |
|----|----------------|-----------------------------------------------------------|

**Returns**

DCG\_InputTS\_List\_t A sequence of [DCG\\_InputTS\\_t](#) entries.

**Exceptions**

|                       |                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board or when board is not an IP Video Gateway or IP Audio Gateway board. |
| <i>OpNotSucceeded</i> | In case invalid references( PhysRef, RefList) are used.                                           |

**Note**

- A value of 0xFFFF for port means all ports.
- An empty RefList means all refs.

**Version**

Release 7.0

**8.73.4.63** void DCM::DeviceControl::SDI\_OutTS\_ChangeL ( in IPS\_Ref\_t *RefPhys*, in DCG\_OutputTS\_List\_t *OutputTSList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OperationFailed)

Change the parameters of one or more existing outgoing SDI or AES streams.

**Parameters**

|    |                     |                                                                   |
|----|---------------------|-------------------------------------------------------------------|
| in | <i>RefPhys</i>      | The SlotNumber and PortNr of which parameters need to be changed. |
| in | <i>OutputTSList</i> | List of <a href="#">DCG_OutputTS_t</a> entries.                   |

**Exceptions**

|                       |                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway.                                                                                                                                                                                                                                                                                      |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>• Invalid references (RefPhys).</li> <li>• Inconsistency between RefPhys.BoardNr &amp; OutputTSList[x].Ref.BoardNr.</li> <li>• Inconsistency between RefPhys.PortNr &amp; OutputTSList[x].Ref.PortNr in case RefPhys.PortNr != 0xFFFF.</li> <li>• Out of range values (Bitrate, UDPPort).</li> <li>• Invalid enum value (State).</li> </ul> |

**Version**

Release 7.0

**8.73.4.64** DCG\_OutputTS\_List\_t DCM::DeviceControl::SDI\_OutTS\_GetL ( in IPS\_Ref\_t *RefPhys* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Get a list of outgoing SDI or AES streams and their parameters.

#### Parameters

|    |                |                                                    |
|----|----------------|----------------------------------------------------|
| in | <i>RefPhys</i> | The BoardNr and PortNr you want information about. |
|----|----------------|----------------------------------------------------|

#### Returns

DCG\_OutputTS\_List\_t, a sequence of [DCG\\_OutputTS\\_t](#) entries.

#### Exceptions

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Video - Gateway or an IP Audio Gateway. |
| <i>OpNotSucceeded</i> | In case invalid references (RefPhys) are used.                                                           |

#### Note

- A value of 0xFFFF for port means all SDI output ports.

#### Version

Release 7.0

**8.73.4.65** void DCM::DeviceControl::SetAES\_GeneratorConfigs ( in unsigned short *BoardNbr*, in DCG\_AES\_GeneratorConfigList\_t *ConfigList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Configure a number of AES test signal generators.

#### Parameters

|    |                   |                                                                                         |
|----|-------------------|-----------------------------------------------------------------------------------------|
| in | <i>BoardNbr</i>   | specifies slot number                                                                   |
| in | <i>ConfigList</i> | The list of the AES test sigal generators and their configurations that need to be set. |

#### Exceptions

|                       |                                                                                                                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNumber = 0 = Main board or when the board is not an IP Audio Gateway board.                                           |
| <i>OpNotSucceeded</i> | In case of <ul style="list-style-type: none"> <li>• Invalid references for generators</li> <li>• invalid enum values</li> </ul> |

#### Version

Release 11.10

**8.73.4.66** void DCM::DeviceControl::SetSDI\_GeneratorConfigs ( in unsigned short *BoardNbr*, in DCG\_GeneratorConfigList\_t *ConfigList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

Configure a number of SDI test signal generators.

#### Parameters

|    |                   |                                                                                         |
|----|-------------------|-----------------------------------------------------------------------------------------|
| in | <i>BoardNbr</i>   | specifies slot number                                                                   |
| in | <i>ConfigList</i> | The list of the SDI test sigal generators and their configurations that need to be set. |

#### Exceptions

|                       |                                                                                                                             |

### 8.73.5 Variable Documentation

**8.73.5.1** const unsigned long DCM::DeviceControl::DCG\_BITMAP\_OUTPUT\_TS\_FEC\_COL\_P-RESENT = 0x200

Will be set when FEC column stream is enabled.

Definition at line 30072 of file DCM.idl.

**8.73.5.2** const unsigned long DCM::DeviceControl::DCG\_BITMAP\_OUTPUT\_TS\_FEC\_ROW\_P-RESENT = 0x400

Will be set when FEC row stream is enabled.

Definition at line 30073 of file DCM.idl.

**8.73.5.3** const unsigned long DCM::DeviceControl::DCG\_BITMAP\_OUTPUT\_TS\_RTP\_ON = 0x8

Definition at line 30069 of file DCM.idl.

**8.73.5.4** const unsigned long DCM::DeviceControl::DCG\_BITMAP\_OUTPUT\_TS\_VBR\_ON = 0x20

Definition at line 30071 of file DCM.idl.

**8.73.5.5** const unsigned long DCM::DeviceControl::DCG\_BITMAP\_OUTPUT\_TS\_VLAN\_ON = 0x10

Definition at line 30070 of file DCM.idl.

## 8.74 General Purpose interface

This contains types, enums and methods to get/set GPI settings.

Collaboration diagram for General Purpose interface:

### Classes

- struct [DCM::DeviceControl::GPI\\_Settings\\_t](#)
- struct [DCM::DeviceControl::GPI\\_StatusControl\\_t](#)

### Typedefs

- typedef sequence< GPI\_Settings\_t > [DCM::DeviceControl::GPI\\_SettingsList\\_t](#)
- typedef sequence < GPI\_StatusControl\_t > [DCM::DeviceControl::GPI\\_StatusControlList\\_t](#)

### Enumerations

- enum [DCM::DeviceControl::eGPI\\_IO\\_t](#) { [DCM::DeviceControl::eInput](#), [DCM::DeviceControl::eOutput](#) }
- enum [DCM::DeviceControl::eGPI\\_Assert\\_t](#) { [DCM::DeviceControl::eLow](#), [DCM::DeviceControl::eHigh](#) }

### Functions

- GPI\_SettingsList\_t [DCM::DeviceControl::GetGpiSettings](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the settings for the 5 contacts.*
- void [DCM::DeviceControl::SetGpiSettings](#) (in GPI\_SettingsList\_t GpiSettingsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OutOfRange)  
*Sets the settings for the 5 contacts.*
- unsigned short [DCM::DeviceControl::GetGpiRebootContact](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the number of the contact used for rebooting the device.*
- void [DCM::DeviceControl::SetGpiRebootContact](#) (in unsigned short ContactNumber) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Sets the number of the contact used for rebooting the device.*
- GPI\_StatusControlList\_t [DCM::DeviceControl::GetGpi](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Queries the status of the 5 contacts.*

- void `DCM::DeviceControl::SetGpi` (in `GPI_StatusControlList_t` `GpiStatusList`) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the status of the 5 contacts Only the Number and Status or Control member of `GPI_StatusControl_t` are taken into account, the other members are ignored in this call.*

- void `DCM::DeviceControl::FCS_SetDeviceIdSelectGpiPin` (in unsigned short `BoardNumber`, in unsigned short `GpiPinNumber`) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the Gpi Pin that is used to identify the device for customer specific Scte53 commands When the selected pin is asserted, the board will handle customer specific Scte35 commands targeted for the backup/secondary device.*

- void `DCM::DeviceControl::FCS_GetDeviceIdSelectGpiPin` (in unsigned short `BoardNumber`, out unsigned short `GpiPinNumber`) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the Gpi Pin that is used to identify the device for customer specific Scte53 commands.*

#### Variables

- const unsigned long `DCM::DeviceControl::CONTACT_COUNT` = 5

#### 8.74.1 Detailed Description

This contains types, enums and methods to get/set GPI settings.

#### 8.74.2 Typedef Documentation

##### 8.74.2.1 typedef sequence<GPI\_Settings\_t> DCM::DeviceControl::GPI\_SettingsList\_t

Definition at line 31583 of file `DCM.idl`.

##### 8.74.2.2 typedef sequence<GPI\_StatusControl\_t> DCM::DeviceControl::GPI\_StatusControlList\_t

Definition at line 31596 of file `DCM.idl`.

#### 8.74.3 Enumeration Type Documentation

##### 8.74.3.1 enum DCM::DeviceControl::eGPI\_Assert\_t

Enumerator:

**eLow** gpi pin active low  
**eHigh** gpi pin active high

Definition at line 31568 of file `DCM.idl`.

##### 8.74.3.2 enum DCM::DeviceControl::eGPI\_IO\_t

Enumerator:

**eInput** gpi pin used as input  
**eOutput** gpi pin used as output

Definition at line 31562 of file `DCM.idl`.

## 8.74.4 Function Documentation

**8.74.4.1** void DCM::DeviceControl::FCS\_GetDeviceIdSelectGpiPin ( in unsigned short *BoardNumber*, out unsigned short *GpiPinNumber* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Gets the Gpi Pin that is used to identify the device for customer specific Scte53 commands.

## Parameters

|     |                     |                                                                                                          |
|-----|---------------------|----------------------------------------------------------------------------------------------------------|
| in  | <i>BoardNumber</i>  | : The board number for which to set the identifier select pin                                            |
| out | <i>GpiPinNumber</i> | : The Gpi pin number that selects the device identifier (valid values 2..5), 0 means no pin configured.. |

## Exceptions

|                       |                                |
|-----------------------|--------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board. |
|-----------------------|--------------------------------|

## Version

Release 7.1

**8.74.4.2** void DCM::DeviceControl::FCS\_SetDeviceIdSelectGpiPin ( in unsigned short *BoardNumber*, in unsigned short *GpiPinNumber* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Sets the Gpi Pin that is used to identify the device for customer specific Scte53 commands When the selected pin is asserted, the board will handle customer specific Scte35 commands targeted for the backup/secondary device.

## Parameters

|    |                     |                                                                                                         |
|----|---------------------|---------------------------------------------------------------------------------------------------------|
| in | <i>BoardNumber</i>  | : The board number for which to set the identifier select pin                                           |
| in | <i>GpiPinNumber</i> | : The Gpi pin number that selects the device identifier (valid values 2..5), 0 means no pin configured. |

## Exceptions

|                       |                                                                                        |
|-----------------------|----------------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | When BoardNr = 0 = Main board.                                                         |
| <i>OpNotSucceeded</i> | In case <ul style="list-style-type: none"> <li>invalid GpiPinNumber is used</li> </ul> |

## Version

Release 7.1

**8.74.4.3** GPI\_StatusControlList\_t DCM::DeviceControl::GetGpi ( ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Queries the status of the 5 contacts.

**Returns**

GPI\_StatusControlList\_t List of [GPI\\_StatusControl\\_t](#)

**Exceptions**

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                            |
| <i>OpNotSucceeded</i> | Internal error                                                       |
| <i>OpNotAllowed</i>   | Not logged in                                                        |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version |

**Version**

Release 7.1

**8.74.4.4 unsigned short DCM::DeviceControl::GetGpiRebootContact ( ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)**

Gets the number of the contact used for rebooting the device.

**Returns**

Number of the contact; 0 in case no number has been set

**Exceptions**

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                            |
| <i>OpNotSucceeded</i> | Internal error                                                       |
| <i>OpNotAllowed</i>   | Not logged in                                                        |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version |

**Version**

Release 7.1

**8.74.4.5 GPI\_SettingsList\_t DCM::DeviceControl::GetGpiSettings ( ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)**

Gets the settings for the 5 contacts.

**Returns**

GPI\_SettingsList\_t List of [GPI\\_Settings\\_t](#)

**Exceptions**

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                            |
| <i>OpNotSucceeded</i> | Internal error                                                       |
| <i>OpNotAllowed</i>   | Not logged in                                                        |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version |

**Version**

Release 7.1

**8.74.4.6 void DCM::DeviceControl::SetGpi ( in GPI\_StatusControlList\_t *GPiStatusList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)**

Sets the status of the 5 contacts Only the Number and Status or Control member of [GPI\\_StatusControl\\_t](#) are taken into account, the other members are ignored in this call.

**Parameters**

|    |                      |                                             |
|----|----------------------|---------------------------------------------|
| in | <i>GPiStatusList</i> | List of <a href="#">GPI_StatusControl_t</a> |
|----|----------------------|---------------------------------------------|

**Exceptions**

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                            |
| <i>OpNotSucceeded</i> | Internal error                                                       |
| <i>OpNotAllowed</i>   | Not logged in                                                        |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version |

**Version**

Release 7.1

**8.74.4.7 void DCM::DeviceControl::SetGpiRebootContact ( in unsigned short *ContactNumber* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)**

Sets the number of the contact used for rebooting the device.

**Parameters**

|    |                       |                |
|----|-----------------------|----------------|
| in | <i>Contact-Number</i> | of the contact |
|----|-----------------------|----------------|

**Exceptions**

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                            |
| <i>OpNotSucceeded</i> | Internal error                                                       |
| <i>OpNotAllowed</i>   | Not logged in                                                        |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version |
| <i>OutOfRange</i>     | A contact with the given number does not exist                       |

**Version**

Release 7.1

**8.74.4.8 void DCM::DeviceControl::SetGpiSettings ( in GPI\_SettingsList\_t *GpiSettingsList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OutOfRange)**

Sets the settings for the 5 contacts.

**Parameters**

|    |                        |                                        |
|----|------------------------|----------------------------------------|
| in | <i>GpiSettingsList</i> | List of <a href="#">GPI_Settings_t</a> |
|----|------------------------|----------------------------------------|

**Exceptions**

|                       |                                                                                                                                              |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing                                                                                                    |
| <i>OpNotSucceeded</i> | Internal error                                                                                                                               |
| <i>OpNotAllowed</i>   | Not logged in                                                                                                                                |
| <i>OpNotSupported</i> | Thrown if this call is not supported in the running software version                                                                         |
| <i>LicenseError</i>   | - When the appropriate license is not installed <ul style="list-style-type: none"><li>• Not enough licenses of this type available</li></ul> |
| <i>OutOfRange</i>     | Too many elements in the specified list                                                                                                      |

## 8.75 Engine

Contains methods to control the Script Engine.

Collaboration diagram for Engine:

### Classes

- struct [DCM::DeviceControl::ScriptEntry\\_t](#)

### Typedefs

- typedef sequence< ScriptEntry\_t > [DCM::DeviceControl::ScriptEntryList\\_t](#)

### Functions

- void [DCM::DeviceControl::AddNewScript](#) (in ByteStream ScriptContents) raises (TimeOut, OpNotSucceeded, LicenseError)  
*Add a new script to the the list of installed scripts.*
- void [DCM::DeviceControl::DeleteScript](#) (in unsigned long ScriptId) raises (TimeOut, OpNotSucceeded, LicenseError)  
*Delete an existing script.*
- void [DCM::DeviceControl::GetScriptsList](#) (out ScriptEntryList\_t ScriptList) raises (TimeOut, LicenseError)  
*Get the list of currently installed scripts.*
- void [DCM::DeviceControl::RunScript](#) (in unsigned long ScriptId) raises (TimeOut, OpNotSucceeded, OpNotAllowed, LicenseError)  
*Run an existing script.*
- void [DCM::DeviceControl::UploadScriptResource](#) (in unsigned long ScriptId, in string FileName, in ByteStream FileContents) raises (TimeOut, OpNotSucceeded, LicenseError)  
*Upload a file to be used by the script (resource, config file,...)*
- void [DCM::DeviceControl::StopScript](#) (in unsigned long ScriptId) raises (TimeOut, OpNotSucceeded, LicenseError)  
*Stop a running script.*
- void [DCM::DeviceControl::SetAutorunScript](#) (in unsigned long ScriptId, in boolean AutoRun) raises (TimeOut, OpNotSucceeded, LicenseError)  
*Change the autorun property of a script, if set to true script will also start.*
- void [DCM::DeviceControl::StopAllScripts](#) () raises (TimeOut, LicenseError)  
*Stop all running scripts.*

- void [DCM::DeviceControl::GetScriptLogfile](#) (in unsigned long ScriptId, out string LogContents) raises (TimeOut, OpNotSucceeded, LicenseError)

*Get a logfile of an installed script.*

### 8.75.1 Detailed Description

Contains methods to control the Script Engine.

### 8.75.2 Typedef Documentation

#### 8.75.2.1 typedef sequence<ScriptEntry\_t> DCM::DeviceControl::ScriptEntryList\_t

Definition at line 31760 of file DCM.idl.

### 8.75.3 Function Documentation

#### 8.75.3.1 void DCM::DeviceControl::AddNewScript ( in ByteStream *ScriptContents* ) raises (TimeOut, OpNotSucceeded, LicenseError)

Add a new script to the the list of installed scripts.

#### Parameters

|    |                       |                                                 |
|----|-----------------------|-------------------------------------------------|
| in | <i>ScriptContents</i> | The full script, with description and signature |
|----|-----------------------|-------------------------------------------------|

#### Exceptions

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script couldn't be verified                   |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

#### Version

release 8.2

#### 8.75.3.2 void DCM::DeviceControl::DeleteScript ( in unsigned long *ScriptId* ) raises (TimeOut, OpNotSucceeded, LicenseError)

Delete an existing script.

#### Parameters

|    |                 |                               |
|----|-----------------|-------------------------------|
| in | <i>ScriptId</i> | The ID assigned to the script |
|----|-----------------|-------------------------------|

#### Exceptions

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

**8.75.3.3** void DCM::DeviceControl::GetScriptLogfile ( in unsigned long *ScriptId*, out string *LogContents* ) raises (Timeout, OpNotSucceeded, LicenseError)

Get a logfile of an installed script.

**Parameters**

|     |                    |                               |
|-----|--------------------|-------------------------------|
| in  | <i>ScriptId</i>    | The ID assigned to the script |
| out | <i>LogContents</i> | The full log of this script   |

**Exceptions**

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

**8.75.3.4** void DCM::DeviceControl::GetScriptsList ( out ScriptEntryList\_t *ScriptList* ) raises (Timeout, LicenseError)

Get the list of currently installed scripts.

**Parameters**

|     |                   |                                         |
|-----|-------------------|-----------------------------------------|
| out | <i>ScriptList</i> | list of all scripts currently installed |
|-----|-------------------|-----------------------------------------|

**Exceptions**

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <i>LicenseError</i> | : when the appropriate license is not installed |
|---------------------|-------------------------------------------------|

**Version**

release 8.2

**8.75.3.5** void DCM::DeviceControl::RunScript ( in unsigned long *ScriptId* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, LicenseError)

Run an existing script.

**Parameters**

|    |                 |                               |
|----|-----------------|-------------------------------|
| in | <i>ScriptId</i> | The ID assigned to the script |
|----|-----------------|-------------------------------|

**Exceptions**

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>OpNotAllowed</i>   | : Script is already running                     |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

**8.75.3.6** void DCM::DeviceControl::SetAutorunScript ( in unsigned long *ScriptId*, in boolean *AutoRun* ) raises (TimeOut, OpNotSucceeded, LicenseError)

Change the autorun property of a script, if set to true script will also start.

**Parameters**

|    |                 |                                        |
|----|-----------------|----------------------------------------|
| in | <i>ScriptId</i> | The ID assigned to the script          |
| in | <i>AutoRun</i>  | Set the autorun property to this value |

**Exceptions**

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

**8.75.3.7** void DCM::DeviceControl::StopAllScripts ( ) raises (TimeOut, LicenseError)

Stop all running scripts.

**Exceptions**

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <i>LicenseError</i> | : when the appropriate license is not installed |
|---------------------|-------------------------------------------------|

**Version**

release 8.2

**8.75.3.8** void DCM::DeviceControl::StopScript ( in unsigned long *ScriptId* ) raises (TimeOut, OpNotSucceeded, LicenseError)

Stop a running script.

**Parameters**

|    |                 |                               |
|----|-----------------|-------------------------------|
| in | <i>ScriptId</i> | The ID assigned to the script |
|----|-----------------|-------------------------------|

**Exceptions**

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

**8.75.3.9** void DCM::DeviceControl::UploadScriptResource ( in unsigned long *ScriptId*, in string *FileName*, in ByteStream *FileContents* ) raises (TimeOut, OpNotSucceeded, LicenseError)

Upload a file to be used by the script (resource, config file,...)

**Parameters**

|    |                     |                                                                         |
|----|---------------------|-------------------------------------------------------------------------|
| in | <i>ScriptId</i>     | The ID assigned to the script                                           |
| in | <i>FileName</i>     | the name of the file to be uploaded                                     |
| in | <i>FileContents</i> | bytestream of a file, configuration file or resource used by the script |

**Exceptions**

|                       |                                                 |
|-----------------------|-------------------------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list                    |
| <i>LicenseError</i>   | : when the appropriate license is not installed |

**Version**

release 8.2

## 8.76 Redundancy

Contains methods to for the Anycast Redundancy feature.

Collaboration diagram for Redundancy:

### Classes

- struct [DCM::DeviceControl::RipSettings\\_t](#)
- struct [DCM::DeviceControl::RipBoardSettings](#)
- struct [DCM::DeviceControl::RipInterfaceSettings](#)
- struct [DCM::DeviceControl::RipTsSettings\\_t](#)
- struct [DCM::DeviceControl::OutputTsLossTriggerPerTs\\_t](#)
- struct [DCM::DeviceControl::OutputTsLossTriggerBitmapPerTs\\_t](#)

### Typedefs

- typedef sequence < RipInterfaceSettings > [DCM::DeviceControl::RipInterfaceSettingsList\\_t](#)
- typedef sequence< RipTsSettings\_t > [DCM::DeviceControl::RipTsSettingsList\\_t](#)
- typedef octet [DCM::DeviceControl::OutputTsLossTrigger\\_t](#)
- typedef sequence < OutputTsLossTriggerPerTs\_t > [DCM::DeviceControl::OutputTsLossTriggerPerTsList\\_t](#)
- typedef unsigned long [DCM::DeviceControl::OutputTsLossTriggerBitmap\\_t](#)  
*Bitmap of Output TS loss triggers.*
- typedef sequence < OutputTsLossTriggerBitmapPerTs\_t > [DCM::DeviceControl::OutputTsLossTriggerBitmapPerTsList\\_t](#)

### Functions

- void [DCM::DeviceControl::OutTS\\_SrcAddrScheme\\_SetL](#) (in unsigned short BoardNbr, in boolean UseScheme, in string IP, in string SubNetMask) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set SourceIp Scheme for new TS created with [IPS\\_OutTS\\_AddL\(\)](#).*
- void [DCM::DeviceControl::OutTS\\_SrcAddrScheme\\_GetL](#) (in unsigned short BoardNbr, out boolean UseScheme, out string IP, out string SubNetMask) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get SourceIp Scheme for a new TS.*
- void [DCM::DeviceControl::GetRipBoardSettings](#) (in unsigned short BoardNbr, out RipBoardSettings Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the board-wide RIP settings.*

- void [DCM::DeviceControl::SetRipBoardSettings](#) (in unsigned short BoardNbr, in RipBoardSettings Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set the board-wide RIP settings.*
- void [DCM::DeviceControl::GetRipInterfaceSettingsL](#) (in unsigned short BoardNbr, in PortList\_t Ports, out RipInterfaceSettingsList\_t Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the RIP Interface settings.*
- void [DCM::DeviceControl::SetRipInterfaceSettingsL](#) (in unsigned short BoardNbr, in RipInterfaceSettingsList\_t Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the RIP Interface settings.*
- void [DCM::DeviceControl::GetRipTsSettingsL](#) (in unsigned short BoardNbr, in IPS\_RefTS\_List\_t TSRefs, out RipTsSettingsList\_t Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get RIP TS-specific Settings.*
- void [DCM::DeviceControl::SetRipTsSettingsL](#) (in unsigned short BoardNbr, in RipTsSettingsList\_t Settings) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get RIP TS-specific Settings.*
- void [DCM::DeviceControl::GetDefaultOutputTsLossTriggers](#) (in unsigned short BoardNbr, out OutputTsLossTrigger\_t Trigger) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the default Output TS Loss trigger.*
- void [DCM::DeviceControl::SetDefaultOutputTsLossTriggers](#) (in unsigned short BoardNbr, in OutputTsLossTrigger\_t Trigger) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set the default Output TS Loss trigger.*
- void [DCM::DeviceControl::GetOutputTsLossTriggerL](#) (in IPS\_Ref\_t PhysRef, in IPS\_RefTS\_List\_t TSRefs, out OutputTsLossTriggerPerTsList\_t Triggers) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the Output TS Loss Triggers for the given TSs.*
- void [DCM::DeviceControl::SetOutputTsLossTriggerL](#) (in IPS\_Ref\_t PhysRef, in OutputTsLossTriggerPerTsList\_t Triggers) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set the Output TS Loss Triggers for the given TSs.*
- void [DCM::DeviceControl::GetDefaultOutputTsLossTriggerBmp](#) (in unsigned short BoardNbr, out OutputTsLossTriggerBitmap\_t TriggerBitmap) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the default Output TS Loss trigger bitmap.*
- void [DCM::DeviceControl::SetDefaultOutputTsLossTriggerBmp](#) (in unsigned short BoardNbr, in OutputTsLossTriggerBitmap\_t TriggerBitmap) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set the default Output TS Loss trigger bitmap.*
- void [DCM::DeviceControl::GetOutputTsLossTriggerBitmapL](#) (in IPS\_Ref\_t PhysRef, in IPS\_RefTS\_List\_t TSRefs, out OutputTsLossTriggerBitmapPerTsList\_t TriggerBitmaps) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Get the Output TS Loss Triggers for the given TSs.*
- void [DCM::DeviceControl::SetOutputTsLossTriggerBitmapL](#) (in unsigned short BoardNr, in OutputTsLossTriggerBitmapPerTsList\_t TriggerBitmaps) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Set the Output TS Loss Triggers for the given TSs.*

## Variables

- const OutputTsLossTrigger\_t [DCM::DeviceControl::OutputTS\\_LossTrigger\\_Disabled](#) = 0
- const OutputTsLossTrigger\_t [DCM::DeviceControl::OutputTS\\_LossTrigger\\_OneService](#) = 1
- const OutputTsLossTrigger\_t [DCM::DeviceControl::OutputTS\\_LossTrigger\\_AllServices](#) = 2

## 8.76.1 Detailed Description

Contains methods to for the Anycast Redundancy feature.

## 8.76.2 Typedef Documentation

8.76.2.1 typedef `octet DCM::DeviceControl::OutputTsLossTrigger_t`

Definition at line 32037 of file DCM.idl.

8.76.2.2 typedef `unsigned long DCM::DeviceControl::OutputTsLossTriggerBitmap_t`

Bitmap of Output TS loss triggers.

- bit 0: indicates that one service should fail to trigger TS loss (compatible with OutputTsLossTrigger\_t).
- bit 1: indicates that all services should be failing to trigger TS loss (compatible with OutputTsLossTrigger\_t).
- bit 2: indicates that 'Stuffing Bitrate Too Low' can trigger TS loss (by default enabled)
- bit 3: indicates that 'Payload Bitrate Too Low' can trigger TS loss (by default enabled)
- bit 4: indicates that TS loss can be triggered by a failing GPS signal (PLL too long in holdover - by default disabled) note: bit 0 and bit 1 cannot be set at the same time note2: the holdover bit (bit 4) can only be set for a TS on a ASI SFN MkII board

Definition at line 32097 of file DCM.idl.

8.76.2.3 typedef `sequence<OutputTsLossTriggerBitmapPerTs_t> DCM::DeviceControl::OutputTsLossTriggerBitmapPerTsList_t`

Definition at line 32130 of file DCM.idl.

8.76.2.4 typedef `sequence<OutputTsLossTriggerPerTs_t> DCM::DeviceControl::OutputTsLossTriggerPerTsList_t`

Definition at line 32064 of file DCM.idl.

8.76.2.5 typedef `sequence<RipInterfaceSettings> DCM::DeviceControl::RipInterfaceSettingsList_t`

Definition at line 31968 of file DCM.idl.

8.76.2.6 typedef `sequence<RipTsSettings_t> DCM::DeviceControl::RipTsSettingsList_t`

Definition at line 32003 of file DCM.idl.

## 8.76.3 Function Documentation

**8.76.3.1** void DCM::DeviceControl::GetDefaultOutputTsLossTriggerBmp ( in unsigned short *BoardNbr*, out OutputTsLossTriggerBitmap\_t *TriggerBitmap* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the default Output TS Loss trigger bitmap.

## Parameters

|     |                      |  |
|-----|----------------------|--|
| in  | <i>BoardNbr</i>      |  |
| out | <i>TriggerBitmap</i> |  |

## Version

Supported since release 10.10

**8.76.3.2** void DCM::DeviceControl::GetDefaultOutputTsLossTriggers ( in unsigned short *BoardNbr*, out OutputTsLossTrigger\_t *Trigger* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the default Output TS Loss trigger.

## Parameters

|     |                 |  |
|-----|-----------------|--|
| in  | <i>BoardNbr</i> |  |
| out | <i>Trigger</i>  |  |

**8.76.3.3** void DCM::DeviceControl::GetOutputTsLossTriggerBitmapL ( in IPS\_Ref\_t *PhysRef*, in IPS\_RefTS\_List\_t *TSRefs*, out OutputTsLossTriggerBitmapPerTsList\_t *TriggerBitmaps* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the Output TS Loss Triggers for the given TSs.

## Parameters

|     |                       |                                           |
|-----|-----------------------|-------------------------------------------|
| in  | <i>PhysRef</i>        |                                           |
| in  | <i>TSRefs</i>         | List of TSs                               |
| out | <i>TriggerBitmaps</i> | List of trigger bitmaps for the given TSs |

## Note

- Wildcards can be used
  - PortNr = 0xFFFF in combination with empty TSRefs list: all TS's on all ports are processed
  - Empty TSRefs list: all TS's on a specified port (depending on PhysRef.PortNr) are processed

## Version

Supported since release 10.10

**8.76.3.4** void DCM::DeviceControl::GetOutputTsLossTriggerL ( in IPS\_Ref\_t *PhysRef*, in IPS\_RefTS\_List\_t *TSRefs*, out OutputTsLossTriggerPerTsList\_t *Triggers* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the Output TS Loss Triggers for the given TSs.

#### Parameters

|     |                 |                                    |
|-----|-----------------|------------------------------------|
| in  | <i>PhysRef</i>  |                                    |
| in  | <i>TSRefs</i>   | List of TSs                        |
| out | <i>Triggers</i> | List of triggers for the given TSs |

**8.76.3.5** void DCM::DeviceControl::GetRipBoardSettings ( in unsigned short *BoardNbr*, out RipBoardSettings *Settings* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the board-wide RIP settings.

#### Parameters

|     |                 |                           |
|-----|-----------------|---------------------------|
| in  | <i>BoardNbr</i> |                           |
| out | <i>Settings</i> | Currently active settings |

#### Exceptions

|                       |                                                                                 |
|-----------------------|---------------------------------------------------------------------------------|
| <i>OpNotSupported</i> | <ul style="list-style-type: none"> <li>The board is not a GbE board.</li> </ul> |
|-----------------------|---------------------------------------------------------------------------------|

**8.76.3.6** void DCM::DeviceControl::GetRipInterfaceSettingsL ( in unsigned short *BoardNbr*, in PortList\_t *Ports*, out RipInterfaceSettingsList\_t *Settings* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the RIP Interface settings.

#### Parameters

|     |                 |                                             |
|-----|-----------------|---------------------------------------------|
| in  | <i>BoardNbr</i> |                                             |
| in  | <i>Ports</i>    | List of interfaces to request settings from |
| out | <i>Settings</i> | Settings for the given ports                |

#### Exceptions

|                        |                                                                                                                      |
|------------------------|----------------------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>Board is not a GbE board</li> <li>Invalid board or port specified.</li> </ul> |
|------------------------|----------------------------------------------------------------------------------------------------------------------|

**8.76.3.7** void DCM::DeviceControl::GetRipTsSettingsL ( in unsigned short *BoardNbr*, in IPS\_RefTS\_List\_t *TSRefs*, out RipTsSettingsList\_t *Settings* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get RIP TS-specific Settings.

#### Parameters

|     |                 |                               |
|-----|-----------------|-------------------------------|
| in  | <i>BoardNbr</i> |                               |
| in  | <i>TSRefs</i>   | List of TSRefs                |
| out | <i>Settings</i> | Settings for all given TSRefs |

#### Exceptions

|                        |                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>Board is not a GbE Board</li> <li>Invalid TS specified</li> </ul> |
|------------------------|----------------------------------------------------------------------------------------------------------|

**8.76.3.8** void DCM::DeviceControl::OutTS\_SrcAddrScheme\_GetL ( in unsigned short *BoardNbr*, out boolean *UseScheme*, out string *IP*, out string *SubNetMask* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get SourceIp Scheme for a new TS.

#### Parameters

|     |                   |                                                        |
|-----|-------------------|--------------------------------------------------------|
| in  | <i>BoardNbr</i>   | boardwide setting for GbE boards.                      |
| out | <i>UseScheme</i>  | use this scheme as default or use the GbE Port Address |
| out | <i>IP</i>         | Start IP Address                                       |
| out | <i>SubNetMask</i> | default SubNetMask, used to increment                  |

#### Exceptions

|                       |                                                             |
|-----------------------|-------------------------------------------------------------|
| <i>OpNotSupported</i> | When called for other boards than GbE ones (Main, ASI,...). |
|-----------------------|-------------------------------------------------------------|

**8.76.3.9** void DCM::DeviceControl::OutTS\_SrcAddrScheme\_SetL ( in unsigned short *BoardNbr*, in boolean *UseScheme*, in string *IP*, in string *SubNetMask* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set SourceIp Scheme for new TS created with [IPS\\_OutTS\\_AddL\(\)](#).

#### Parameters

|    |                   |                                                        |
|----|-------------------|--------------------------------------------------------|
| in | <i>BoardNbr</i>   | boardwide setting for GbE boards.                      |
| in | <i>UseScheme</i>  | use this scheme as default or use the GbE Port Address |
| in | <i>IP</i>         | Start IP Address                                       |
| in | <i>SubNetMask</i> | default SubNetMask, used to increment                  |

#### Exceptions

|                       |                                                             |
|-----------------------|-------------------------------------------------------------|
| <i>OpNotSupported</i> | When called for other boards than GbE ones (Main, ASI,...). |
|-----------------------|-------------------------------------------------------------|

|                        |                                                                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | In case of <ul style="list-style-type: none"> <li>Invalid IPaddress (not valid IP address: IPv4 format).</li> <li>Invalid SubNetMask (not valid IP address, not all 1's followed by all 0's).</li> </ul> |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Note**

Incrementing is done based on the SubNetMask: e.g. SubNetMask = 255.255.0.0, Start IP address = 192.10.0.1 => next IP address is 192.11.0.1 SubNetMask = 255.255.255.255, Start IP address = 192.10.0.1 => next IP address is 192.10.0.2

IP address is not unique over different I/O boards.

only unicast host ip addresses are accepted: 1.0.0.0 to 223.255.255.255 with exception of 127.x.y.z

**8.76.3.10** void DCM::DeviceControl::SetDefaultOutputTsLossTriggerBmp ( in unsigned short *BoardNbr*, in OutputTsLossTriggerBitmap\_t *TriggerBitmap* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set the default Output TS Loss trigger bitmap.

**Parameters**

|    |                      |  |
|----|----------------------|--|
| in | <i>BoardNbr</i>      |  |
| in | <i>TriggerBitmap</i> |  |

**Exceptions**

|                        |                                                                                                                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>Undefined trigger bits were set.</li> <li>Both service loss bits were set (bit 0 and bit 1)</li> <li>The GPS Holdover trigger bit (bit 4) was set for a non-ASI SFN MkII board</li> </ul> |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Version**

Supported since release 10.10

**8.76.3.11** void DCM::DeviceControl::SetDefaultOutputTsLossTriggers ( in unsigned short *BoardNbr*, in OutputTsLossTrigger\_t *Trigger* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set the default Output TS Loss trigger.

**Parameters**

|    |                 |  |
|----|-----------------|--|
| in | <i>BoardNbr</i> |  |
| in | <i>Trigger</i>  |  |

**8.76.3.12** void DCM::DeviceControl::SetOutputTsLossTriggerBitmapL ( in unsigned short *BoardNr*, in OutputTsLossTriggerBitmapPerTsList\_t *TriggerBitmaps* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set the Output TS Loss Triggers for the given TSs.

#### Parameters

|    |                       |                                           |
|----|-----------------------|-------------------------------------------|
| in | <i>BoardNr</i>        |                                           |
| in | <i>TriggerBitmaps</i> | List of trigger bitmaps for the given TSs |

#### Exceptions

|                        |                                                                                                                                                                                                                                                                                                           |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"><li>• An invalid TS or port was specified.</li><li>• Undefined trigger bits were set.</li><li>• Both service loss bits were set (bit 0 and bit 1)</li><li>• The GPS Holdover trigger bit (bit 4) was set for a TS that is not running on a ASI SFN MkII board</li></ul> |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### Version

Supported since release 10.10

**8.76.3.13** void DCM::DeviceControl::SetOutputTsLossTriggerL ( in IPS\_Ref\_t *PhysRef*, in OutputTsLossTriggerPerTsList\_t *Triggers* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set the Output TS Loss Triggers for the given TSs.

#### Parameters

|    |                 |                                    |
|----|-----------------|------------------------------------|
| in | <i>PhysRef</i>  |                                    |
| in | <i>Triggers</i> | List of triggers for the given TSs |

#### Exceptions

|                        |                                                                                        |
|------------------------|----------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"><li>• An invalid TS or port was specified.</li></ul> |
|------------------------|----------------------------------------------------------------------------------------|

**8.76.3.14** void DCM::DeviceControl::SetRipBoardSettings ( in unsigned short *BoardNbr*, in RipBoardSettings *Settings* ) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Set the board-wide RIP settings.

#### Parameters

|    |                 |              |
|----|-----------------|--------------|
| in | <i>BoardNbr</i> |              |
| in | <i>Settings</i> | New settings |

**Exceptions**

|                        |                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>• The board is not a GbE board.</li> <li>• Any of the values is out of range.</li> </ul> |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------|

**8.76.3.15** void DCM::DeviceControl::SetRipInterfaceSettingsL ( in unsigned short *BoardNbr*, in RipInterfaceSettingsList\_t *Settings* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get the RIP Interface settings.

**Parameters**

|    |                 |                              |
|----|-----------------|------------------------------|
| in | <i>BoardNbr</i> |                              |
| in | <i>Settings</i> | Settings for the given ports |

**Exceptions**

|                        |                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSucceeded</i>  | <ul style="list-style-type: none"> <li>• Board is not a GbE board</li> <li>• Invalid board or port specified.</li> <li>• Invalid router address</li> </ul> |
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>• Unsupported boardnr</li> </ul>                                                                                    |

**8.76.3.16** void DCM::DeviceControl::SetRipTsSettingsL ( in unsigned short *BoardNbr*, in RipTsSettingsList\_t *Settings* ) raises (TimeOut, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

Get RIP TS-specific Settings.

**Parameters**

|    |                 |                               |
|----|-----------------|-------------------------------|
| in | <i>BoardNbr</i> |                               |
| in | <i>Settings</i> | Settings for all given TSRefs |

**Exceptions**

|                        |                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>OpNotSucceeded</i>  | <ul style="list-style-type: none"> <li>• Board is not a GbE Board</li> <li>• Invalid TS specified</li> <li>• Parameters out of range</li> </ul> |
| <i>OperationFailed</i> | <ul style="list-style-type: none"> <li>• Board is not a GbE Board</li> <li>• Invalid parameters</li> </ul>                                      |

## 8.77 idl

Contains methods to for engineering tests.

Collaboration diagram for idl:

### Functions

- void **DCM::DeviceControl::ReturnOperationFailedException** (in unsigned short *Type*, in string - *Explantion*) raises (OperationFailed)  
*Return an OperationFailed Exception.*

#### 8.77.1 Detailed Description

Contains methods to for engineering tests.

#### 8.77.2 Function Documentation

**8.77.2.1 void DCM::DeviceControl::ReturnOperationFailedException ( in unsigned short *Type*, in string *Explantion* ) raises (OperationFailed)**

Return an OperationFailed Exception.

This operation is added when adding the new exception to test this before other operations start returning the exception. !!!! THIS OPERATION CAN BE REMOVED AT ANY MOMENT.

#### Parameters

|    |                   |                                                              |
|----|-------------------|--------------------------------------------------------------|
| in | <i>Type</i>       | Type, represented by the first 2 bytes of the exception info |
| in | <i>Explantion</i> | Explantion, represented by the rest of the exception info    |

#### Exceptions

|                       |                              |
|-----------------------|------------------------------|
| <i>OpNotSucceeded</i> | : Script was not in the list |
|-----------------------|------------------------------|

#### Version

release 8.7

## 8.78 BitrateThresholdAlarms

### Classes

- struct [DCM::DeviceControl::BitrateAlarmSetting\\_t](#)  
*Structure to pass payload and stuffing bitrate threshold alarm settings.*
- struct [DCM::DeviceControl::OutTS\\_AlarmSetting\\_t](#)  
*Structure to pass payload and stuffing bitrate threshold alarm settings to one specific TS.*

### Typedefs

- typedef sequence < [OutTS\\_AlarmSetting\\_t](#) > [DCM::DeviceControl::OutTS\\_AlarmSettingList\\_t](#)  
*List of alarm settings.*
- typedef sequence< unsigned long > [DCM::DeviceControl::RefList\\_t](#)  
*List of TS indices.*

### Functions

- void [DCM::DeviceControl::OutTsSetBitrateThresholdL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [OutTS\\_AlarmSettingList\\_t](#) AlarmList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets bitrate threshold alarm parameters for a (number of) TS(s).*
- [OutTS\\_AlarmSettingList\\_t](#) [DCM::DeviceControl::OutTsGetBitrateThresholdL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [RefList\\_t](#) TsIdxs) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the bitrate threshold alarm parameters for a (number of) TS(s).*
- void [DCM::DeviceControl::SetBitrateAlarmDefaults](#) (in unsigned short Board, in [BitrateAlarmSetting\\_t](#) BitrateAlarm) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets bitrate threshold alarm default parameters.*
- [BitrateAlarmSetting\\_t](#) [DCM::DeviceControl::GetBitrateAlarmDefaults](#) (in unsigned short Board) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves bitrate threshold alarm default parameters.*

### 8.78.1 Typedef Documentation

#### 8.78.1.1 typedef sequence<OutTS\_AlarmSetting\_t> DCM::DeviceControl::OutTS\_AlarmSettingList\_t

List of alarm settings.

Definition at line 23001 of file DCM.idl.

#### 8.78.1.2 typedef sequence<unsigned long> DCM::DeviceControl::RefList\_t

List of TS indices.

Definition at line 23002 of file DCM.idl.

### 8.78.2 Function Documentation

#### 8.78.2.1 BitrateAlarmSetting\_t DCM::DeviceControl::GetBitrateAlarmDefaults ( in unsigned short Board ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Retrieves bitrate threshold alarm default parameters.

**Parameters**

|    |              |                                               |
|----|--------------|-----------------------------------------------|
| in | <i>Board</i> | The board from which the settings are needed. |
|----|--------------|-----------------------------------------------|

**8.78.2.2** `OutTS_AlarmSettingList_t DCM::DeviceControl::OutTsGetBitrateThresholdL ( in IPS_Ref_t PhysRef, in RefList_t TsIdxs )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Retrieves the bitrate threshold alarm parameters for a (number of) TS(s).

**Parameters**

|    |                |                                                                                                                                                        |
|----|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| in | <i>PhysRef</i> | The port from which the settings are needed.                                                                                                           |
| in | <i>TsIdxs</i>  | A list holding the TS indexes from which the settings are needed. This list can be left empty to return the settings for all TSs on the given PhysRef. |

**8.78.2.3** `void DCM::DeviceControl::OutTsSetBitrateThresholdL ( in IPS_Ref_t PhysRef, in OutTS_AlarmSettingList_t AlarmList )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Sets bitrate threshold alarm parameters for a (number of) TS(s).

**Parameters**

|    |                  |                                                                                  |
|----|------------------|----------------------------------------------------------------------------------|
| in | <i>PhysRef</i>   | The port for which the settings are intended.                                    |
| in | <i>AlarmList</i> | A list holding the new settings in combination with the TS they're intended for. |

**8.78.2.4** `void DCM::DeviceControl::SetBitrateAlarmDefaults ( in unsigned short Board, in BitrateAlarmSetting_t BitrateAlarm )` raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

Sets bitrate threshold alarm default parameters.

**Parameters**

|    |                     |                                                |
|----|---------------------|------------------------------------------------|
| in | <i>Board</i>        | The board for which the settings are intended. |
| in | <i>BitrateAlarm</i> | The new default settings.                      |

## 8.79 Statmux

### Classes

- struct [DCM::DeviceControl::SMX\\_PoolRef\\_t](#)
- struct [DCM::DeviceControl::SMX\\_StatMuxPool](#)
- struct [DCM::DeviceControl::SMX\\_StatMuxPool\\_V2](#)
- struct [DCM::DeviceControl::SMX\\_EncRef\\_t](#)
- struct [DCM::DeviceControl::SMX\\_Encoder\\_t](#)
- struct [DCM::DeviceControl::SMX\\_ServiceRef\\_t](#)
- struct [DCM::DeviceControl::SMX\\_Service\\_t](#)
- struct [DCM::DeviceControl::SMX\\_EncVideoBitRate\\_t](#)

### Typedefs

- typedef sequence< SMX\_StatMuxPool > [DCM::DeviceControl::SMX\\_StatMuxPoolList](#)
- typedef sequence< SMX\_StatMuxPool\_V2 > [DCM::DeviceControl::SMX\\_StatMuxPoolList\\_V2](#)
- typedef sequence< SMX\_Encoder\_t > [DCM::DeviceControl::SMX\\_EncoderList](#)
- typedef sequence< SMX\_Service\_t > [DCM::DeviceControl::SMX\\_ServiceList](#)
- typedef sequence< SMX\_EncVideoBitRate\_t > [DCM::DeviceControl::SMX\\_EncVideoBitRateList](#)

### Enumerations

- enum [DCM::DeviceControl::StatMuxMode](#) { [DCM::DeviceControl::SMM\\_Async](#), [DCM::DeviceControl::SMM\\_Sync](#), [DCM::DeviceControl::SMM\\_Off](#) }
- enum [DCM::DeviceControl::ContentMode](#) { [DCM::DeviceControl::CM\\_AVC\\_MPEG2\\_Combined](#), [DCM::DeviceControl::CM\\_MPEG2](#) }
- enum [DCM::DeviceControl::EncoderState](#) { [DCM::DeviceControl::ES\\_OK](#), [DCM::DeviceControl::ES\\_Disconnected](#) }
- enum [DCM::DeviceControl::FrameRateCodes](#) { [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_23\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_24\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_25\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_29\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_30\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_50\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_59\\_HZ](#), [DCM::DeviceControl::FRAME\\_RATE\\_CODE\\_60\\_HZ](#) }
- enum [DCM::DeviceControl::VideoFormats](#) { [DCM::DeviceControl::MQF\\_VF\\_SD](#), [DCM::DeviceControl::MQF\\_VF\\_HD1080I](#), [DCM::DeviceControl::MQF\\_VF\\_HD720P](#), [DCM::DeviceControl::MQF\\_VF\\_HDP3](#) }
- enum [DCM::DeviceControl::EncoderType](#) { [DCM::DeviceControl::ET\\_MPEG2](#), [DCM::DeviceControl::ET\\_AVC](#) }
- enum [DCM::DeviceControl::BackupType](#) { [DCM::DeviceControl::BT\\_Main](#), [DCM::DeviceControl::BT\\_Backup](#) }
- enum [DCM::DeviceControl::SMX\\_EnablingMode\\_e](#) { [DCM::DeviceControl::SMX\\_StatmuxDisabled](#), [DCM::DeviceControl::SMX\\_StatmuxEnabled](#), [DCM::DeviceControl::SMX\\_D9036StatmuxEnabled](#) }

## Functions

- SMX\_StatMuxPoolList [DCM::DeviceControl::SMX\\_StatMuxPools\\_GetL](#) (in SMX\_PoolRef\_t PoolRef) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- SMX\_StatMuxPoolList\_V2 [DCM::DeviceControl::SMX\\_StatMuxPools\\_GetL\\_V2](#) (in SMX\_PoolRef\_t PoolRef) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- void [DCM::DeviceControl::SMX\\_StatMuxPools\\_SetL](#) (in unsigned short BoardNr, in SMX\_StatMuxPoolList PoolList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- void [DCM::DeviceControl::SMX\\_StatMuxPools\\_SetL\\_V2](#) (in unsigned short BoardNr, in SMX\_StatMuxPoolList\_V2 PoolList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- SMX\_EncoderList [DCM::DeviceControl::SMX\\_Encoders\\_GetL](#) (in SMX\_PoolRef\_t PoolRef) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

**8.79.3 Function Documentation**

**8.79.3.1 BackupType** DCM::DeviceControl::SMX\_BackupType\_Get ( in unsigned short *BoardNr* )  
raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

- 8.79.3.2 void DCM::DeviceControl::SMX\_BackupType\_Set ( in unsigned short *BoardNr*, in BackupType *Type* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.3 string DCM::DeviceControl::SMX\_BoardSetup\_Get ( in unsigned short *BoardNr* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.4 void DCM::DeviceControl::SMX\_BoardSetup\_Set ( in unsigned short *BoardNr*, in string *MulticastIP* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.5 void DCM::DeviceControl::SMX\_EncoderBlackList\_AddL ( in unsigned short *BoardNr*, in IP\_List\_t *EncoderList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.6 void DCM::DeviceControl::SMX\_EncoderBlackList\_DeleteL ( in unsigned short *BoardNr*, in IP\_List\_t *EncoderList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.7 IP\_List\_t DCM::DeviceControl::SMX\_EncoderBlackList\_GetL ( in unsigned short *BoardNr* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.8 SMX\_EncoderList DCM::DeviceControl::SMX\_Encoders\_GetL ( in SMX\_PoolRef\_t *PoolRef* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.9 boolean DCM::DeviceControl::SMX\_GetStatmux ( in unsigned short *BoardNr* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.10 SMX\_EnablingMode\_e DCM::DeviceControl::SMX\_GetStatmux\_V2 ( in unsigned short *BoardNr* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX\\_GetStatmux](#)(in unsigned short *BoardNr*) Get the statmux enabling mode.

#### Note

Older version this was a boolean 0=statmux disabled 1=statmux enabled (D9032 statmux).

#### Version

release 8.9

- 8.79.3.11 void DCM::DeviceControl::SMX\_GetStatmuxPoolBitrates ( in SMX\_PoolRef\_t *PoolRef*, out SMX\_EncVideoBitRateList *EncBitRatesList*, out BitRateSampleList\_t *NullRateList* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.12 SMX\_ServiceList DCM::DeviceControl::SMX\_Service\_GetL ( in SMX\_PoolRef\_t *PoolRef* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.13 void DCM::DeviceControl::SMX\_SetStatmux ( in unsigned short *BoardNr*, in boolean *Enabled* ) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.14 void DCM::DeviceControl::SMX\_SetStatmux\_V2 ( in unsigned short *BoardNr*, in SMX\_EnablingMode\_e *EnableMode* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX\\_SetStatmux](#)(in unsigned short *BoardNr*, in SMX\_EnablingMode\_e *EnableMode*) Sets the statmux enabling mode.

**Note**

Older version this was a boolean 0=statmux disabled 1=statmux enabled (D9032 statmux).

**Version**

release 8.9

- 8.79.3.15 **SMX\_StatMuxPoolList** DCM::DeviceControl::SMX\_StatMuxPools\_GetL ( in SMX\_PoolRef\_t *PoolRef* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.16 **SMX\_StatMuxPoolList\_V2** DCM::DeviceControl::SMX\_StatMuxPools\_GetL\_V2 ( in SMX\_PoolRef\_t *PoolRef* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.17 void DCM::DeviceControl::SMX\_StatMuxPools\_SetL ( in unsigned short *BoardNr*, in SMX\_StatMuxPoolList *PoolList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)
- 8.79.3.18 void DCM::DeviceControl::SMX\_StatMuxPools\_SetL\_V2 ( in unsigned short *BoardNr*, in SMX\_StatMuxPoolList\_V2 *PoolList* ) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

## 9 Namespace Documentation

### 9.1 DCM Namespace Reference

#### Classes

- interface [DeviceControl](#)  
*The only interface of DCM to the outside world.*
- interface [DeviceCallback](#)
- interface [DCM\\_Notifications](#)  
*Description of all external notifications.*

#### Variables

- const unsigned short [MAX\\_ACTIVE\\_OUTPUT\\_TS\\_PER\\_BOARD](#) = 500  
*DEFINES:*
- const unsigned short [MAX\\_ACTIVE\\_OUTPUT\\_TS\\_PER\\_PORT](#) = 250  
*Active streaming.*
- const unsigned short [MAX\\_OUTPUT\\_TS\\_PER\\_BOARD](#) = 2000  
*Active streaming.*

#### 9.1.1 Variable Documentation

##### 9.1.1.1 const unsigned short DCM::MAX\_ACTIVE\_OUTPUT\_TS\_PER\_BOARD = 500

DEFINES:

- Maximum number of supported TSs/ IO board is 500.
- Maximum number of supported TSs/GBE output port is 250.
- Maximum number of supported TSs/GBE input port is 500.
- It is possible to create 2000 TSs on a board respectively on a port but only 500 or 250 can be 'active streaming'
- Maximum string length without terminating 0.
- BoardNr = 0 is Main board
- The number of board locations a device has depends on the chassis type. For [DCM](#) 2RU MkI chassis: 4 For [DCM](#) 1RU chassis: 2 For [DCM](#) 2RU MkII chassis: 8 Unless otherwise stated, board numbers range from 1 to the number of board locations.

Definition at line 52 of file DCM.idl.

##### 9.1.1.2 const unsigned short DCM::MAX\_ACTIVE\_OUTPUT\_TS\_PER\_PORT = 250

Active streaming.

Definition at line 53 of file DCM.idl.

### 9.1.1.3 `const unsigned short DCM::MAX_OUTPUT_TS_PER_BOARD = 2000`

Active streaming.

Definition at line 54 of file DCM.idl.

## 10 Class Documentation

### 10.1 `DCM::DeviceControl::AC_t` Struct Reference

Access Criteria.

```
import "DCM.idl";
```

Collaboration diagram for `DCM::DeviceControl::AC_t`:

#### Public Attributes

- `string` [Name](#)  
*name of AC (extension to Simulcrypt protocol)*
- `ByteStream` [Data](#)  
*buffer for AC data (a sequence of chars)*

#### 10.1.1 Detailed Description

Access Criteria.

Definition at line 27632 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.2 `DCM::DeviceControl::AddPidsFromSplice_t` Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AddPidsFromSplice\_t:

#### Public Attributes

- [IPS\\_Service\\_t SvcOut](#)
- [boolean AddPidsFromSplice](#)

#### 10.2.1 Detailed Description

Definition at line 17680 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.3 DCM::DeviceControl::AlarmTriggerRule\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AlarmTriggerRule\_t:

#### Public Attributes

- [MM\\_ID\\_t AlarmRef](#)
- boolean [Trigger](#)

#### 10.3.1 Detailed Description

Definition at line 21405 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.4 DCM::DeviceControl::AlternateSource\_t Struct Reference

A definition of an alternate source.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AlternateSource\_t:

### Public Attributes

- [IPS\\_Service\\_t SvcSource](#)
- [AlternateSrcId\\_t AlternateSrcId](#)  
*the ID of this alternate source (read-only)*

### 10.4.1 Detailed Description

A definition of an alternate source.

Definition at line 17722 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.5 DCM::DeviceControl::AlternateSourceSettings\_t Struct Reference

All the settings concerning alternate sources for one output service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AlternateSourceSettings\_t:

### Public Attributes

- [AlternateSourceList\\_t AlternateSources](#)  
*A list of all the alternate sources.*
- [AlternateSrcId\\_t MainSourceId](#)  
*the ID of the main source (this is initially the original source) (read-only)*
- [AlternateSrcId\\_t ActiveSourceId](#)  
*the ID of the currently active source (read-only)*
- [AlternateSrcId\\_t InsertionSourceId](#)  
*The ID of the insertion source (0xFFFFFFFF if none is present) (read-only)*

### 10.5.1 Detailed Description

All the settings concerning alternate sources for one output service.

Definition at line 17731 of file DCM.idl.

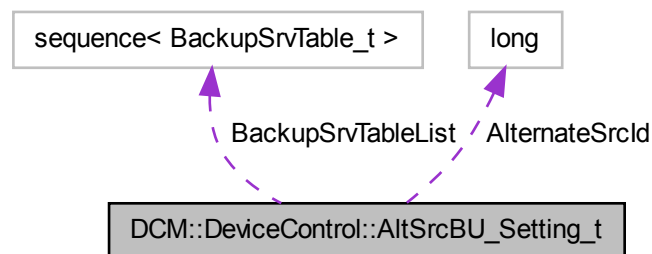

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.6 DCM::DeviceControl::AltSrcBU\_Setting\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AltSrcBU\_Setting\_t:

#### Public Attributes

- [AlternateSrcId\\_t AlternateSrcId](#)
- [BackupSrvTableList\\_t BackupSrvTableList](#)

#### 10.6.1 Detailed Description

Definition at line 23203 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.7 DCM::DeviceControl::AltSrcMergeActiveInSvc\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AltSrcMergeActiveInSvc\_t:

### Public Attributes

- [AlternateSrcId\\_t AlternateSrcId](#)  
*The id of the alternate svc where the merge svc is located.*
- [IPS\\_Service\\_t MergeService](#)  
*The Merge Svc on which the Backup Svc is located.*
- [IPS\\_Service\\_t ActiveInService](#)  
*The Backup Svc that is (get) or should be (set) activated.*

#### 10.7.1 Detailed Description

Definition at line 23246 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.8 DCM::DeviceControl::AltSrcMergedSetting\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AltSrcMergedSetting\_t:

#### Public Attributes

- [AlternateSrcId\\_t AlternateSrcId](#)
- [IPS\\_MergedInServiceList\\_t MergedInServiceList](#)

#### 10.8.1 Detailed Description

Definition at line 5264 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.9 DCM::DeviceControl::ArpEntry\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ArpEntry\_t:

#### Public Attributes

- string [IP\\_Addr](#)  
*e.g. "10.11.52.101"*
- string [MacAddr](#)  
*e.g. "00:00:c4:25:31:12"*
- [eArpStatus](#) [Status](#)
- [IPS\\_Ref\\_t](#) [RefPhys](#)

#### 10.9.1 Detailed Description

Definition at line 18599 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.10 DCM::DeviceControl::ASI\_BW\_LimitData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_BW\_LimitData\_t:

#### Public Attributes

- [IPS\\_Ref\\_t](#) Location
- boolean [Enabled](#)
- unsigned long [Bitrate](#)

#### 10.10.1 Detailed Description

Definition at line 6954 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.11 DCM::DeviceControl::ASI\_DTF\_Ex\_t Struct Reference

Structure holding DTF input settings. The difference with the [ASI\\_DTF\\_t](#) structure is that this structure here doesn't hold the scrambling key directly. Instead, it holds a reference to a key in the list that can be set up using the [ASI\\_DTF\\_SetKeyList](#) method. Also the scrambling type can be selected to be odd or even.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_Ex\_t:

## Public Attributes

- [IPS\\_RefTS\\_t](#) [InputRef](#)  
*The reference to the DTF input stream.*
- boolean [bBlocked](#)  
*True means input not used, false means input passed.*
- boolean [bEncapsulated](#)  
*True means output encapsulated in ghost PID, false means passed.*
- boolean [bRemoveStuffing](#)  
*If true and bEncapsulated is false, then the original stuffing packets are removed.*
- unsigned short [OutputPID](#)  
*Ghost PID for encapsulating this input stream.*
- unsigned long [AFInterval](#)  
*The interval between two adaptation fields, in ms.*
- unsigned long [TS\\_InProperty](#)  
*Property bitmap: bit[0] indicates scrambling status (1 = OK)*
- boolean [bBIS1Scrambled](#)  
*True means this stream will be scrambled while encapsulating.*
- unsigned short [ScramblingKeyIndex](#)  
*Index into the scrambling key list, should be less than 1024, used when not overridden by the global default.*
- [eASI\\_DTF\\_ScramblingType](#) [ScramblingType](#)  
*Input level scrambling type setting, used when not overridden by the global type.*

### 10.11.1 Detailed Description

Structure holding DTF input settings. The difference with the [ASI\\_DTF\\_t](#) structure is that this structure here doesn't hold the scrambling key directly. Instead, it holds a reference to a key in the list that can be set up using the [ASI\\_DTF\\_SetKeyList](#) method. Also the scrambling type can be selected to be odd or even.

Definition at line 21999 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.12 DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t Struct Reference

Structure holding DTF output settings. The difference with the [ASI\\_DTF\\_OutputTS\\_t](#) is that this structure here provides for scrambling type, scrambling key indices and the possibility to overrule the input-level settings by one global setting.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_OutputTS\_Ex\_t:

### Public Attributes

- [IPS\\_RefTS\\_t](#) [OutputRef](#)  
The reference to the DTF output stream, currently only stream 9 on port 9 is supported.
- unsigned long [Bitrate](#)  
The outgoing bitrate of the DTF output in bps.
- unsigned long [TS\\_OutProperty](#)  
Property bitmap.
- boolean [bUseMainScramblingKeyIndex](#)  
True to use the main scrambling key index for all inputs, false to use individual input key indices.
- unsigned short [MainScramblingKeyIndex](#)  
Main index into the scrambling key list.
- boolean [bUseMainScramblingType](#)  
True to use the main scrambling type for all inputs, false to use individual input types.
- [eASI\\_DTF\\_ScramblingType](#) [MainScramblingType](#)  
Main scrambling type.
- [ASI\\_DTF\\_ListEx\\_t](#) [OutputMux](#)  
List of input settings.

### 10.12.1 Detailed Description

Structure holding DTF output settings. The difference with the [ASI\\_DTF\\_OutputTS\\_t](#) is that this structure here provides for scrambling type, scrambling key indices and the possibility to overrule the input-level settings by one global setting.

Definition at line 22044 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.13 DCM::DeviceControl::ASI\_DTF\_OutputTS\_RDCS\_t Struct Reference

Structure holding DTF RDCS output settings. From V9.0 onwards.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_OutputTS\_RDCS\_t:

### Public Attributes

- [IPS\\_RefTS\\_t OutputRef](#)  
*The reference to the DTF output stream, currently only stream 9 on port 9 is supported.*
- [ASI\\_DTF\\_RDCS\\_List\\_t InputSettings](#)  
*List of DTF RDCS input settings.*

### 10.13.1 Detailed Description

Structure holding DTF RDCS output settings. From V9.0 onwards.

Definition at line 22057 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.14 DCM::DeviceControl::ASI\_DTF\_OutputTS\_t Struct Reference

Structure holding DTF output settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_OutputTS\_t:

### Public Attributes

- [IPS\\_RefTS\\_t OutputRef](#)  
*The reference to the DTF output stream, currently only stream 9 on port 9 is supported.*
- unsigned long [Bitrate](#)  
*The outgoing bitrate of the DTF output in bps.*
- unsigned long [TS\\_OutProperty](#)  
*Property bitmap.*
- [ASI\\_DTF\\_List\\_t OutputMux](#)  
*List of input settings.*

### 10.14.1 Detailed Description

Structure holding DTF output settings.

**Deprecated** Obsoleted by [ASI\\_DTF\\_OutputTS\\_Ex\\_t](#) from release 6.0

Definition at line 22032 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.15 DCM::DeviceControl::ASI\_DTF\_RDCS\_t Struct Reference

Structure holding DTF RDCS input settings. From V9.0 onwards.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_RDCS\_t:

### Public Attributes

- [IPS\\_RefTS\\_t InputRef](#)  
*The reference to the DTF input stream.*
- boolean [bRDCS](#)  
*True means stream consists of a Remultiplexer Data and Control Stream.*

### 10.15.1 Detailed Description

Structure holding DTF RDCS input settings. From V9.0 onwards.

Definition at line 22014 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.16 DCM::DeviceControl::ASI\_DTF\_ScramblingKey\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_ScramblingKey\_t:

#### Public Attributes

- unsigned short [Index](#)  
*Index in the array of keys, should be <1024.*
- string [OddKey](#)  
*Hex encoded scrambling key for use with odd scrambling, a valid key is exactly 12 characters long.*
- string [EvenKey](#)  
*Hex encoded scrambling key for use with even scrambling, a valid key is exactly 12 characters long.*

#### 10.16.1 Detailed Description

Definition at line 22077 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.17 DCM::DeviceControl::ASI\_DTF\_ScramblingKeyPair\_t Struct Reference

Structure holding DTF scrambling keys.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_ScramblingKeyPair\_t:

#### Public Attributes

- [ByteStream OddScramblingKey](#)  
*Scrambling key for use with odd scrambling, should be exactly 6 bytes long.*
- [ByteStream EvenScramblingKey](#)  
*Scrambling key for use with even scrambling, should be exactly 6 bytes long.*

#### 10.17.1 Detailed Description

Structure holding DTF scrambling keys.

**Deprecated** Obsoleted in release 6.0

Definition at line 22065 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.18 DCM::DeviceControl::ASI\_DTF\_t Struct Reference

Structure holding DTF input settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_DTF\_t:

### Public Attributes

- [IPS\\_RefTS\\_t InputRef](#)  
*The reference to the DTF input stream.*
- boolean [bBlocked](#)  
*true means input not used, false means input passed*
- boolean [bEncapsulated](#)  
*true means output encapsulated in ghost PID, false means passed*
- boolean [bRemoveStuffing](#)  
*if true and bEncapsulated is false, then the original stuffing packets are removed*
- unsigned short [OutputPID](#)  
*Ghost PID for encapsulating this input stream.*
- unsigned long [AFInterval](#)  
*The interval between two adaptation fields, in ms.*
- unsigned long [TS\\_InProperty](#)  
*Property bitmap.*
- boolean [bBISS1Scrambled](#)  
*true means this stream will be scrambled while encapsulating*
- [ByteStream BISS1ScramblingKey](#)  
*scrambling key should be 6 bytes long (scrambling is always even)*

#### 10.18.1 Detailed Description

Structure holding DTF input settings.

**Deprecated** Obsoleted by [ASI\\_DTF\\_Ex\\_t](#) from release 6.0

Definition at line 21981 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.19 DCM::DeviceControl::ASI\_MirrorCfg\_t Struct Reference

Structure to define port mirroring for ASI.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_MirrorCfg\_t:

### Public Attributes

- unsigned short [MirrorPortNr](#)  
*Output port to where the data is mirrored.*
- unsigned short [MainPortNr](#)  
*Mirror source port from where content is routed.*

### 10.19.1 Detailed Description

Structure to define port mirroring for ASI.

- The content of an ASI input port can be transparently looped to a specified output port (mirror port)
- The content of an ASI output port can be duplicated to a specified output port

Definition at line 6650 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.20 DCM::DeviceControl::ASI\_SF\_N\_MKII\_MDP\_MultiplicationSettings\_t Struct Reference 1276

### 10.20 DCM::DeviceControl::ASI\_SF\_N\_MKII\_MDP\_MultiplicationSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_SF\_N\_MKII\_MDP\_MultiplicationSettings\_t:

#### Public Attributes

- unsigned short [MDP\\_MultiplicationFactor](#)  
*Range 1..4, in steps of 1.*
- unsigned short [MDP\\_MultiplicationDelay](#)  
*Range 1--100 ms, in steps of 1.*

#### 10.20.1 Detailed Description

Definition at line 29528 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.21 DCM::DeviceControl::ASI\_SF\_N\_MKII\_RDCS\_Settings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_SF\_N\_MKII\_RDCS\_Settings\_t:

### Public Attributes

- unsigned short [Delay](#)  
*Range 10--100 ms, in steps of 1.*
- unsigned short [MDP\\_ExtensionInterval](#)  
*Range 10--1000 ms, in steps of 1.*
- unsigned short [MDP\\_DiscontinuityDetectionTimeout](#)  
*Range 10--1000 ms, in steps of 1.*
- [ASI\\_SF\\_N\\_MKII\\_MDP\\_MultiplicationSettings\\_t](#) [MDP\\_MultiplicationSettings](#)
- unsigned short [CRSP\\_Interval](#)  
*Range 10--1000 ms, in steps of 1.*
- unsigned short [CYTS\\_Delay](#)  
*Range 5--100 ms, in steps of 1.*

#### 10.21.1 Detailed Description

Definition at line 29534 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.22 DCM::DeviceControl::ASI\_SF\_N\_MKII\_TS\_Output\_Mode\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ASI\_SF\_N\_MKII\_TS\_Output\_Mode\_t:

#### Public Attributes

- [enASI\\_SF\\_N\\_MKII\\_TS\\_Output\\_Mode eTS\\_Output\\_Mode](#)  
*Type of TS.*
- unsigned short [uTS\\_Output\\_RDCS](#)  
*RDCS TS number if eTS\_Output\_Mode is eTS\_Output\_Main and RDCS < Range 0..7, in steps of 1.*

#### 10.22.1 Detailed Description

Definition at line 29544 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.23 DCM::DeviceControl::AsiFormatData\_t Struct Reference

Structure to set ASI format and output mode.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::AsiFormatData\_t:

#### Public Attributes

- [IPS\\_Ref\\_t Location](#)
- [eAsiPacketFormat PacketFormat](#)
- [eAsiOutputMode OutputMode](#)

#### 10.23.1 Detailed Description

Structure to set ASI format and output mode.

Definition at line 6637 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.24 DCM::DeviceControl::BackupService\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BackupService\_t:

#### Public Attributes

- [IPS\\_Service\\_t BackupService](#)  
*specifies BoardNr, PortNr, TS and output SID*

#### 10.24.1 Detailed Description

Definition at line 23047 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.25 DCM::DeviceControl::BackupSrvTable\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BackupSrvTable\_t:

## Public Attributes

- [IPS\\_Service\\_t MergeSvcSource](#)  
*specifies BoardNr, PortNr, TS and input SID of merged service < (main or merged in service)*
- [BackupServiceList\\_t BackupSvcList](#)  
*specifies list of BoardNr, PortNr, TS and input SID < for backup service*

## 10.25.1 Detailed Description

Definition at line 23053 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.26 DCM::DeviceControl::BannerCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BannerCfg\_t:

## Public Attributes

- [BannerCfgID\\_t BannerCfgID](#)  
*unique banner configuration identifier BannerCfgID 0 will be the default banner, it will always exist and is undeletable.*
- [string BannerCfgName](#)  
*Banner configuration name, maximum 64 characters.*
- [Color\\_t BannerColor](#)  
*Only applicable for creating a solid colored banner.*
- [unsigned short BannerOpacity](#)  
*10 \* opacity in % (e.g. OpacityX10 = 11 means an opacity of 1.1%), < 100% opaque means not transparent at all.*
- [unsigned short BannerWidth](#)  
*In pixels.*
- [unsigned short BannerHeight](#)  
*In pixels.*
- [unsigned short BannerX\\_Position](#)  
*In pixels, upper left hand corner is (x,y) = (0,0).*
- [unsigned short BannerY\\_Position](#)  
*In pixels.*
- [unsigned short BannerFadeIn](#)  
*in frames, max 300 frames, 0 is instant display*
- [unsigned short BannerFadeOut](#)  
*in frames, max 300 frames, 0 is instant removal*
- [LogoCfgID\\_List\\_t BannerLogoIDs](#)  
*Logos to display along with the banner.*
- [FontCfgID\\_t TextFontID](#)

*The font ID to be used.*

- [Color\\_t TextColor](#)

*Text color.*

- unsigned short [TextOpacity](#)

*10 \* opacity in % (e.g. OpacityX10 = 11 means an opacity of 1.1%), < 100% opaque means not transparent at all.*

- unsigned short [TextHeight](#)

*In pixels. Must be smaller or equal to BannerHeight.*

- unsigned short [TextMaxWidth](#)

*In pixels. Must be smaller or equal to BannerWidth.*

- unsigned short [TextLoopCount](#)

*Number of times an banner should be displayed: loop count of 0 means animation is played continously, loop count of 3 means animation is played three times.*

- long [TextSpeed](#)

*Scrolling speed of the text in pixels/frame. Positive values scroll < from right to left, negative values from left to right.*

- unsigned long [BannerProperty](#)

*Read only Bitmap.*

### 10.26.1 Detailed Description

Definition at line 13881 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.27 DCM::DeviceControl::BannerCfg\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BannerCfg\_V2\_t:

### Public Attributes

- [BannerCfgID\\_t BannerCfgID](#)  
*unique banner configuration identifier BannerCfgID 0 will be the default banner, it will always exist and is undeletable.*
- [string BannerCfgName](#)  
*Banner configuration name, maximum 64 characters.*
- [Color\\_t BannerColor](#)  
*Only applicable for creating a solid colored banner.*
- [unsigned short BannerOpacity](#)  
*10 \* opacity in % (e.g. OpacityX10 = 11 means an opacity of 1.1%), < 100% opaque means not transparent at all.*

  - Read only Bitmap.*
- string [DefaultBannerText](#)
  - Default banner text, encoded in UTF-8, If the text is empty (contains no characters) and the default banner text must be used, the banner is not displayed.*
- [enBannerStopType\\_t enBannerStopType](#)
  - Behaviour when the banner is stopped. From version release 9.0.*

### 10.27.1 Detailed Description

Definition at line 13943 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.28 DCM::DeviceControl::BitrateAlarmSetting\_t Struct Reference

Structure to pass payload and stuffing bitrate threshold alarm settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BitrateAlarmSetting\_t:

### Public Attributes

- unsigned long [PayloadBitrateThreshold](#)  
*In pbs. When payload drops below this threshold, alarm will be triggered.*
- boolean [PayloadBitrateEnabled](#)  
*True means alarm monitoring is enabled for the 'Payload Bitrate Too Low' alarm.*
- unsigned long [StuffingRateThreshold](#)  
*In bps. When stuffing drops below this threshold, alarm will be triggered.*
- boolean [StuffingRateEnabled](#)  
*True means alarm monitoring is enabled for the 'Stuffing Bitrate Too Low' alarm.*

### 10.28.1 Detailed Description

Structure to pass payload and stuffing bitrate threshold alarm settings.

Definition at line 22986 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.29 DCM::DeviceControl::BitRateMeasurement\_t Struct Reference

General structure to hold bitrate measurement data.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BitRateMeasurement\_t:

#### Public Attributes

- unsigned long [CurBitRate](#)  
*Current BitRate: 1 bit/s resolution - max  $2^{32}-1$ .*
- unsigned long [AvgBitRate](#)
- unsigned long [MinBitRate](#)
- unsigned long [MaxBitRate](#)

#### 10.29.1 Detailed Description

General structure to hold bitrate measurement data.

Definition at line 9779 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.30 DCM::DeviceControl::BoardBitrateThreshold Struct Reference

The bitrate threshold for video, audio and data service losses (board specific).

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardBitrateThreshold:

#### Public Attributes

- unsigned long [VideoBitrateThreshold](#)  
*Bitrate threshold for video PIDs - in bps.*
- unsigned long [AudioBitrateThreshold](#)  
*Bitrate threshold for audio PIDs - in bps.*
- unsigned long [DataBitrateThreshold](#)  
*Bitrate threshold for data PIDs - in bps.*

#### 10.30.1 Detailed Description

The bitrate threshold for video, audio and data service losses (board specific).

Definition at line 22817 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.31 DCM::DeviceControl::BoardCfg\_t Struct Reference

Structure to get or set port information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardCfg\_t:

### Public Attributes

- [IPS\\_Ref\\_t Location](#)  
*The board location and port.*
- [IPS\\_Ref\\_t BackupLocation](#)  
*For ASI a backup input can be specified.*
- [string UserName](#)  
*A user defined name. Max. 40 characters.*
- [eIOInterfaceType IOInterfaceType](#)  
*The type of the port (ASI/GbE).*
- [eIOTType IOType](#)  
*The direction of the port.*
- [boolean Enabled](#)  
*Whether this port is enabled or disabled.*
- [unsigned long PortProperty](#)  
*Read only Bitmap used by GUI to display specific icons. Bit: 0 Individual GbE port streaming state Bit: 1 This port is an SFP port (GbE, Sdi, ...). A user can plug in an appropriate SFP. Bit: 2 This port is a DetMux RDCS TS port. Bit: 31 Monitoring port, restricted functionality Other bits: Future use. (0 for the moment)*

#### 10.31.1 Detailed Description

Structure to get or set port information.

This structure is used by [BoardCfgSet\(\)](#) and [BoardCfgGetL\(\)](#) to set and get configuration data of the ports.

Definition at line 1656 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.32 DCM::DeviceControl::BoardCfg\_V2\_t Struct Reference

Structure to get or set port information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardCfg\_V2\_t:

### Public Attributes

- [IPS\\_Ref\\_t Location](#)  
*The board location and port.*
- [IPS\\_Ref\\_t BackupLocation](#)  
*For ASI a backup input can be specified.*
- [string UserName](#)  
*A user defined name. Max. 40 characters.*
- [eIOInterfaceType\\_V2 IOInterfaceType](#)  
*The type of the port (ASI/GbE).*
- [eIOType\\_V2 IOType](#)  
*The direction of the port.*
- [ePortEnabledMode PortEnabledMode](#)  
*How the port mode is configured.*
- [boolean EnabledStatus](#)  
*Whether the status of this port is enabled or disabled.*
- [unsigned long PortProperty](#)  
*Read only Bitmap used by GUI to display specific icons. Bit: 0 Individual GbE port streaming state Bit: 1 This port is an SFP port (GbE, Sdi, ...). A user can plug in an appropriate SFP. Bit: 2 This port is a DetMux RDCS TS port. Bit: 31 Monitoring port, restricted functionality Other bits: Future use. (0 for the moment)*

### 10.32.1 Detailed Description

Structure to get or set port information.

- version 2 This structure is used by [BoardCfg\\_V2\\_Set\(\)](#) and [BoardCfg\\_V2\\_GetL\(\)](#) to set and get configuration data of the ports.

#### Version

Release 8.1

Definition at line 1698 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.33 DCM::DeviceControl::BoardDejitterCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardDejitterCfg\_t:

#### Public Attributes

- unsigned short [VbrLatency](#)  
*The VBR dejitter latency in msec, should be 110ms <= latency <= 180.*
- unsigned short [CbrLatency](#)  
*The CBR dejitter latency in msec, should be 10 <= latency <= 110.*
- boolean [EnableCbrLatency](#)  
*If true, CBR dejittered streams will use the CBR latency.*

#### 10.33.1 Detailed Description

Definition at line 2959 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.34 DCM::DeviceControl::BoardFeatureUsage\_t Struct Reference

Contains the feature usage per board.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardFeatureUsage\_t:

### Public Attributes

- unsigned short [BoardNr](#)  
*the slot number.*
- [FeatureUsageList\\_t](#) [FeatureUsageList](#)  
*a list of all the used features.*

#### 10.34.1 Detailed Description

Contains the feature usage per board.

Definition at line 20707 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.35 DCM::DeviceControl::BoardIdentification Struct Reference

Information data as returned by [GetSystemId\(\)](#).

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardIdentification:

### Public Attributes

- string [BoardName](#)
- string [OrderNumber](#)
- string [SerialNumber](#)
- string [UserName](#)
- string [SlotName](#)  
*Max 40 chars e.g. Input, Output, Aggregate, ... (refers to the backplane name)*
- string [SlotId](#)  
*Max 5 chars e.g. 1A (refers to the backplane id)*
- [VersionInfoList](#) [BoardVersion](#)

#### 10.35.1 Detailed Description

Information data as returned by [GetSystemId\(\)](#).

Definition at line 1281 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.36 DCM::DeviceControl::BoardInfo\_t Struct Reference

Structure to return board configuration.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardInfo\_t:

#### Public Attributes

- unsigned short [BoardNumber](#)  
*The board location the board sits in.*
- eBoardType [BoardType](#)  
*The type. See `DCM_Types.idl`.*

#### 10.36.1 Detailed Description

Structure to return board configuration.

#### Version

Release 1.0

Definition at line 1563 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.37 DCM::DeviceControl::BoardInfo\_V2\_t Struct Reference

Structure to return board configuration.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardInfo\_V2\_t:

#### Public Attributes

- unsigned short [BoardNumber](#)  
*The board location the board sits in.*
- eBoardType\_V2 [BoardType](#)  
*The type. See DCM\_Types.idl.*

#### 10.37.1 Detailed Description

Structure to return board configuration.

#### Version

Release 6.9

Definition at line 1575 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.38 DCM::DeviceControl::BoardTemperature\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::BoardTemperature\_t:

#### Public Attributes

- unsigned short [DaughterBoard](#)  
*The daughter board identification as returned in `BoardsConnected`.*
- [ComponentTemperature\\_List\\_t](#) `ComponentTemperature_List`

#### 10.38.1 Detailed Description

Definition at line 1948 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.39 DCM::DeviceControl::ClearPidBitrates\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ClearPidBitrates\_t:

#### Public Attributes

- [IPS\\_Service\\_t SvcOut](#)
- boolean [ClearPidBitrates](#)

#### 10.39.1 Detailed Description

Definition at line 17636 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.40 DCM::DeviceControl::CofTrigger\_t Struct Reference

Structure used in the configuration of the triggers for card not operational failure alarms.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::CofTrigger\_t:

#### Public Attributes

- unsigned short [SlotNumber](#)  
*zero based index of the board's slot number (0 = main board).*
- [eBoardPresenceTrigger\\_t](#) `Trigger`  
*defines the trigger for the alarm.*

#### 10.40.1 Detailed Description

Structure used in the configuration of the triggers for card not operational failure alarms.

Definition at line 22940 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.41 DCM::DeviceControl::Color\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Color\_t:

#### Public Attributes

- octet [R](#)
- octet [G](#)
- octet [B](#)

#### 10.41.1 Detailed Description

Definition at line 13871 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.42 DCM::DeviceControl::CompactCaMode\_t Struct Reference

Compact CA descriptor setting (per input TS)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::CompactCaMode\_t:

#### Public Attributes

- [eCompactCaMode Mode](#)
- [boolean FollowDefaultRule](#)

*readonly flag indicating if default compact CA settings are used*

#### 10.42.1 Detailed Description

Compact CA descriptor setting (per input TS)

Definition at line 8107 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.43 DCM::DeviceControl::ComponentMergeCriterium\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ComponentMergeCriterium\_t:

### Public Attributes

- [AlternateSrcId\\_t](#) AlternateSrcId
- [IPS\\_RefSvc\\_t](#) ServiceIn
- [MergeCriteriumList\\_t](#) MergeCriteriumList

*For the set call this is the new complete list of merge criteria for an input service.*

#### 10.43.1 Detailed Description

Definition at line 5067 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.44 DCM::DeviceControl::ComponentTag\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ComponentTag\_t:

### Public Attributes

- [IPS\\_RefTS\\_t m\\_RefTsOut](#)  
*The Slot, Port and Index.*
- unsigned long [m\\_ulOutputSid](#)
- unsigned short [m\\_usOutputPid](#)
- octet [m\\_ocComponentTag](#)

#### 10.44.1 Detailed Description

Definition at line 5759 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.45 DCM::DeviceControl::ComponentTemperature\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ComponentTemperature\_t:

#### Public Attributes

- string [Name](#)  
*Possible values: "FEC Die" (I/O board, DaughterBoard 2) "FEC Ambient" (I/O board, DaughterBoard 2) "Ambient 1" (Main board, DaughterBoard 0) "Ambient 2" (Main board, DaughterBoard 0)*
- long [Temperature](#)  
*The temperature of this component in degrees centigrade.*

#### 10.45.1 Detailed Description

Definition at line 1935 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.46 DCM::DeviceControl::ComponentTrackRule\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ComponentTrackRule\_t:

### Public Attributes

- unsigned long [m\\_ulID](#)
- [IPS\\_Service\\_t](#) [m\\_Service](#)  
*Sid can be INVALID\_SID\_VALUE in case of a TS PID.*
- [enuTrackType](#) [m\\_eTrackType](#)
- octet [m\\_ocComponentTag](#)  
*valid if component tag tracking*
- octet [m\\_ocStreamType](#)  
*valid if stream type tracking*
- string [m\\_strLanguage](#)  
*valid if stream type tracking and audio streamtype*
- unsigned long [m\\_ulDescriptorTag](#)  
*0x56 for teletext descriptor*
- unsigned short [m\\_usInputPid](#)  
*valid is pid tracking (ES, ECM and ES-ECM: always THE input pid)*
- unsigned short [m\\_usEsPreferredOutputPid](#)  
*valid if pid tracking for ECM pid: parent must exist.*
- unsigned short [m\\_usPreferredOutputPid](#)
- [enuRuleSetting](#) [m\\_eRuleSetting](#)

#### 10.46.1 Detailed Description

Definition at line 5789 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.47 DCM::DeviceControl::ComponentTrackRule\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ComponentTrackRule\_V2\_t:

## Public Attributes

- unsigned long `m_ulID`
- `IPS_Service_t m_Service`  
*Sid can be INVALID\_SID\_VALUE in case of a TS PID.*
- `TrackingCriterium_t m_TrackCriterium`
- unsigned short `m_usPreferredOutputPid`
- `enuRuleSetting m_eRuleSetting`

### 10.47.1 Detailed Description

Definition at line 5807 of file DCM.idl.

The documentation for this struct was generated from the following file:

- DCM.idl

## 10.48 DCM::DeviceControl::CompPidES\_t Struct Reference

### Identification of muxed pids.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::CompPidES\_t:

#### Public Attributes

- [IPS\\_RefPid\\_t InputPid](#)  
*Value of the PID at the input TS.*
- unsigned long [Sid](#)  
*Value of the SID at the output TS.*
- octet [streamtype](#)  
*streamtype as it will be added in the PMT. Value: 0..255*

#### 10.48.1 Detailed Description

Identification of muxed pids.

Definition at line 2824 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.49 DCM::DeviceControl::CompPidES\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::CompPidES\_V2\_t:

### Public Attributes

- [IPS\\_RefPid\\_t InputPid](#)

Value of the PID at the input TS. < If in the pid ref, board and port are set to 0xFFFF and input TS ref is 0xFFFFFFFF, < this means it is a dummy output elementary stream. A reference for this < ES will be created in the outgoing PMT. On the output TS, the input pid value < will be used as unique identifier and preferred output pid for the dummy ES.

- unsigned long [Sid](#)

Value of the SID at the output TS.

- octet [streamtype](#)

streamtype as it will be added in the PMT. Value: 0..255

- [eEsTypeStandard EsTypeStandard](#)

The standard of the input TS : DVB, ATSC or Motorola < (necessary to correctly interpret the ES type during matching) < Will only be used for dummy ES, else the real input TS standard < be used.

### 10.49.1 Detailed Description

Definition at line 2834 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.50 DCM::DeviceControl::DCG\_3D\_pair\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_3D\_pair\_t:

### Public Attributes

- [IPS\\_RefTS\\_t left](#)
- [IPS\\_RefTS\\_t right](#)

### 10.50.1 Detailed Description

Definition at line 30221 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.51 DCM::DeviceControl::DCG\_AES\_GeneratorConfig\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_AES\_GeneratorConfig\_t:

### Public Attributes

- [IPS\\_RefTS\\_t](#) GeneratorRef
- boolean bGenEnabled
- [eAES\\_SampleRate\\_t](#) eSampleRate
- [eAES\\_WaveMode\\_t](#) eWaveMode
- [eAES\\_WaveModeDetail\\_t](#) eWaveModeDetail
- unsigned long iGenPropertyBits

*Future use.*

### 10.51.1 Detailed Description

Definition at line 30803 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.52 DCM::DeviceControl::DCG\_AudioPairInfo\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_AudioPairInfo\_t:

### Public Attributes

- [DCG\\_AudioID\\_t](#) AudioPairId
- boolean AudioPairEnable
- boolean AudioPairPresent
- [enDCG\\_AudioResolution\\_t](#) AudioResolution
- unsigned long AudioSampleRate
- unsigned long AudioBitRate
- [enDCG\\_AudioStatus\\_t](#) StatusRightCh
- [enDCG\\_AudioStatus\\_t](#) StatusLeftCh

#### 10.52.1 Detailed Description

Definition at line 31189 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.53 DCM::DeviceControl::DCG\_AudioSignalInfo\_t Struct Reference

Describes the audio signal information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_AudioSignalInfo\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)  
*Reference of input stream.*
- boolean [Valid](#)  
*Valid status.*
- unsigned long [SampleRate](#)  
*Sample rate (Hz)*
- unsigned long [Bitrate](#)  
*Bitrate of audio signal (bit/s), future!*
- [enDCG\\_AudioResolution\\_t LeftChCoding](#)  
*Resolution of audio left channel.*
- [enDCG\\_AudioResolution\\_t RightChCoding](#)  
*Resolution of audio right channel.*

#### 10.53.1 Detailed Description

Describes the audio signal information.

Definition at line 31204 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.54 DCM::DeviceControl::DCG\_BackupStream\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_BackupStream\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t OutRef](#)
- [IPS\\_RefTS\\_t BackupStream](#)

#### 10.54.1 Detailed Description

Definition at line 31033 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.55 DCM::DeviceControl::DCG\_CompressionEnable\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_CompressionEnable\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t VideoRef](#)
- [enDCG\\_CompressionMode\\_t CompressMode](#)

#### 10.55.1 Detailed Description

Definition at line 31246 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.56 DCM::DeviceControl::DCG\_GeneratorConfig\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_GeneratorConfig\_t:

### Public Attributes

- [IPS\\_RefTS\\_t](#) GeneratorRef
- boolean GenEnabled
- [eSDI\\_GeneratorMode\\_t](#) Mode
- [eSDI\\_ColorOutputMode\\_t](#) ColorOutputMode
- *only Static mode supported*
- unsigned long GenPropertyBits
- *Future use.*
- octet RedColorValue
- octet GreenColorValue
- octet BlueColorValue

#### 10.56.1 Detailed Description

Definition at line 30732 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.57 DCM::DeviceControl::DCG\_HitlessSwitchOverEnable\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_HitlessSwitchOverEnable\_t:

### Public Attributes

- [IPS\\_RefTS\\_t VideoRef](#)
- [enDCG\\_HitlessSwitchOverMode\\_t hitlessSwitchOverMode](#)
- unsigned long [RtpPacketsWindow](#)
- unsigned long [delay](#)

### 10.57.1 Detailed Description

Definition at line 31499 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.58 DCM::DeviceControl::DCG\_InputRTP\_Stream\_t Struct Reference

Prior to version 9.10: Between 10 and 100 (default 60) A sequence of [DCG\\_InputTS\\_t](#) entries.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_InputRTP\_Stream\_t:

## Public Attributes

- [DCG\\_InputTS\\_t](#) Common
- [IPS\\_UDP\\_Socket\\_t](#) Socket  
*Unique IP-Address and UDP port combination.*
- short [VideoLineOffset](#)  
*between plus and minus 10 (default = 0)*
- short [VideoPixelOffset](#)  
*between plus and minus 432(SD)/1320(HD) (default = 0)*
- unsigned short [DejitterBufferSize](#)  
*in ms < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)*

### 10.58.1 Detailed Description

Prior to version 9.10: Between 10 and 100 (default 60) A sequence of [DCG\\_InputTS\\_t](#) entries.

Definition at line 30002 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.59 DCM::DeviceControl::DCG\_InputRTP\_Stream\_V2\_t Struct Reference

Prior to version 9.10: Between 10 and 100 (default 60)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_InputRTP\_Stream\_V2\_t:

## Public Attributes

- [DCG\\_InputTS\\_t](#) Common
- [IPS\\_UDP\\_Socket\\_t](#) Socket

*Unique IP-Address and UDP port combination.*

- [eTxClockingMode\\_t](#) TxClockMode
- short [VideoLineOffset](#)
- short [VideoPixelOffset](#)
- unsigned short [DeJitterBufferSize](#)

*in ms < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)*

### 10.59.1 Detailed Description

Prior to version 9.10: Between 10 and 100 (default 60)

Definition at line 30024 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.60 DCM::DeviceControl::DCG\_InputRTP\_Stream\_V3\_t Struct Reference

Prior to version 9.10: Between 10 and 100 (default 60)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_InputRTP\_Stream\_V3\_t:

## Public Attributes

- [DCG\\_InputTS\\_t Common](#)
- [IPS\\_UDP\\_Socket\\_t Socket](#)

*Unique IP-Address and UDP port combination.*

- [eTxClockingMode\\_t TxClockMode](#)
- long [VideoOffsetDelay](#)

*For Video Gateway: Unit is nanos, ranging from -100000000 to 100000000 in increments of 5 ns. < For Audio Gateway: Unit is frames, ranging from 0 to 191 in increments of 1 frame.*

- unsigned short [DejitterBufferSize](#)

*in ms < For Audio Gateway: Between 10 and 200 (default 25) < For uncompressed: Between 7 and 200 (default 25) < For compressed: Between 1 and 200 (default 25) < Prior to version 10.10: Between 10 and 200 (default 25)*

## 10.60.1 Detailed Description

Prior to version 9.10: Between 10 and 100 (default 60)

Definition at line 30040 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.61 DCM::DeviceControl::DCG\_InputTS\_t Struct Reference

Information of an incoming TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DCG\_InputTS\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- unsigned long [TS\\_InProperty](#)  
*Read only Bitmap used by GUI to display specific icons.*
- [eVideoFormat\\_t ExpectedVideoFormat](#)
- string [UserName](#)

## 10.61.1 Detailed Description

Information of an incoming TS.

Definition at line 29978 of file DCM.idl.

The documentation for this struct was generated from the following file:

### 10.73 DCM::DCM\_Notifications Interface Reference

Description of all external notifications.

```
import "DCM.idl";
```

#### Classes

- struct [DCM\\_TsIdOnIdChange](#)  
*Notification sent by IO when an alarm configured as trigger changes current state (alarms) No parameters given.*
- struct [Messages](#)  
*Notification sent by MB when a new message is available (alarms)*
- struct [Output\\_SI\\_TableChng](#)

*Notification sent when a Table is added (starts streaming) or changed.*

- struct [Output\\_SI\\_TableDel](#)

*Notification sent when a Table is deleted (stops streaming).*

- struct [Output\\_TS\\_Change](#)
- struct [Output\\_TS\\_Delete](#)

*Notification sent when a TS is deleted (removed from DCM).*

### 10.73.1 Detailed Description

Description of all external notifications.

Notifications are sent as a sequence of notifications of the same type. The data of a notification is a sequence of maximum 10 unsigned longs. Here is a description of the data of each notification. The name of the struct is the name of the notification.

Definition at line 32228 of file DCM.idl.

The documentation for this interface was generated from the following file:

- [DCM.idl](#)

## 10.74 DCM::DCM\_Notifications::DCM\_TsIdOnIdChange Struct Reference

Notification sent by IO when an alarm configured as trigger changes current state (alarms) No parameters given.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::DCM\_TsIdOnIdChange:

### Public Attributes

- unsigned long [bOnlyScramblingTS](#)  
*boolean to notify only TS's with licenses are reported*
- unsigned long [BoardNr](#)
- unsigned long [PortNr](#)
- unsigned long [Ref](#)
- unsigned long [OldOnId](#)
- unsigned long [NewOnId](#)
- unsigned long [OldTsId](#)
- unsigned long [NewTsId](#)

### 10.74.1 Detailed Description

Notification sent by IO when an alarm configured as trigger changes current state (alarms) No parameters given.

The client should synchronize each time

### Remarks

OBSOLETE, not sent anymore since [DCM V5.1](#) Notification sent by MB when TSID/ONID of a TS with DVB\_SCRAMBLING licenses changes.

Definition at line 32256 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.75 DCM::DeviceControl::Debug\_DvbS2\_InputTS\_t Struct Reference

Information about a DVBS2 input TS, including the hardware index.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Debug\_DvbS2\_InputTS\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)  
The location of the TS (Board, Port and Ref).
- [DvbS2\\_Isi\\_t Isi](#)  
Input stream identifier (`INVALID_ISI` in case of single stream).
- unsigned long [HwIndex](#)  
The hardware index for a stream.

### 10.75.1 Detailed Description

Information about a DVBS2 input TS, including the hardware index.

Definition at line 7763 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.76 DCM::DeviceControl::Debug\_Gbe\_InputTS\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Debug\_Gbe\_InputTS\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)  
*The location of the TS (Board, Port and Ref).*
- [IPS\\_UDP\\_Socket\\_t Socket](#)  
*Unique IP-Address and UDP port combination.*
- string [SourceIP](#)  
*The source IP-Address of the incoming TS.*
- unsigned long [HwIndex](#)  
*The hardware index for a stream.*

## 10.76.1 Detailed Description

Definition at line 2383 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.77 DCM::DeviceControl::Debug\_Gbe\_OutputTS\_t Struct Reference

Information-Settings of an outgoing TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Debug\_Gbe\_OutputTS\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefOut](#)  
*The location of the TS (Board, Port and Ts Ident).*
- [IPS\\_UDP\\_Socket\\_t DestSocket](#)  
*Unique destination IP-Address and UDP port combination.*
- unsigned long [HwIndex](#)  
*The hardware index for a stream.*

#### 10.77.1 Detailed Description

Information-Settings of an outgoing TS.

Definition at line 2448 of file DCM.idl.

The documentation for this struct was generated from the following file:

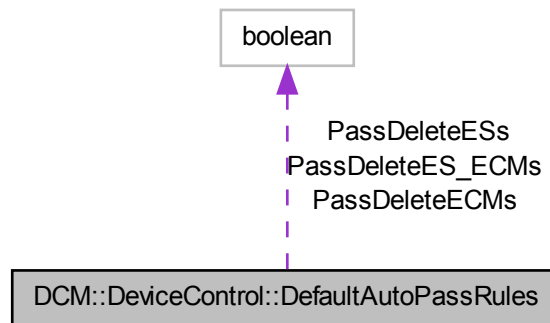

- [DCM.idl](#)

## 10.78 DCM::DeviceControl::DefaultAutoPassRules Struct Reference

Default Service component behaviour.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DefaultAutoPassRules:

#### Public Attributes

- boolean [PassDeleteESs](#)  
*read-write; true = ESs are auto passed/deleted; false = block of ESs; default true*
- boolean [PassDeleteECMs](#)  
*read-write; true = ECMs are auto passed/deleted; false = block of ECMs; default true*
- boolean [PassDeleteES\\_ECMs](#)  
*read-write; true = ES\_ECMs are auto passed/deleted; false = block of ES\_ECMs*

#### 10.78.1 Detailed Description

Default Service component behaviour.

Definition at line 2879 of file DCM.idl.

The documentation for this struct was generated from the following file:

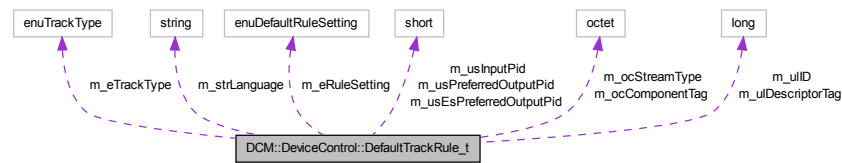

- [DCM.idl](#)

### 10.79 DCM::DeviceControl::DefaultTrackRule\_t Struct Reference

Structure for board default component tracking rules.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DefaultTrackRule\_t:

### Public Attributes

- unsigned long [m\\_ulID](#)
- [enuTrackType](#) [m\\_eTrackType](#)
- octet [m\\_ocComponentTag](#)  
*valid if component tag tracking*
- octet [m\\_ocStreamType](#)  
*valid if stream type tracking*
- string [m\\_strLanguage](#)  
*valid if stream type tracking and audio streamtype*
- unsigned long [m\\_ulDescriptorTag](#)  
*0x56 for teletext descriptor*
- unsigned short [m\\_usInputPid](#)  
*valid is pid tracking (ES, ECM and ES-ECM: always THE input pid)*

*valid if pid tracking for ECM pid: parent must exist.*
- unsigned short [m\\_usPreferredOutputPid](#)
- [enuDefaultRuleSetting](#) [m\\_eRuleSetting](#)

#### 10.79.1 Detailed Description

Structure for board default component tracking rules.

This is a first version, development both embedded and at the GUI side may change this.

Definition at line 5830 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.80 DCM::DeviceControl::DescrBISS\_Cfg\_t Struct Reference

Configuration of BISS descrambling.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrBISS\_Cfg\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)  
*reference of the TS on the BISS descrambler.*
- [ByteStream EvenSessionWord](#)  
*session word for BISS descrambling with even parity.*
- [ByteStream OddSessionWord](#)  
*session word for BISS descrambling with odd parity.*

### 10.80.1 Detailed Description

Configuration of BISS descrambling.

Currently either an even or add session word can be provided (BISS-1 has a fixed parity). The unused parity is determined by leaving the session word for that parity empty. This structure only can be used to set the BISS session word on TS level. Configuration of session words on service level or component level is done via [DescrSvcConfigSetL\(\)](#).

Definition at line 28769 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.81 DCM::DeviceControl::DescrCAM\_BackupCfg\_t Struct Reference

Structure used to configure CAM backup.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrCAM\_BackupCfg\_t:

### Public Attributes

- [IPS\\_Ref\\_t MainCAM](#)  
*reference of the main CAM*
- boolean [bEnabled](#)  
*true: backup enabled, false: backup disabled*
- [IPS\\_Ref\\_t BackupCAM](#)  
*reference of the backup CAM*
- [IPS\\_Ref\\_t ActiveCAM](#)  
*active CAM (can also be used to revert to MAIN CAM)*
- unsigned long [BackupDelay](#)  
*delay to switch from a failing CAM to the backup*
- unsigned long [BackupTrigger](#)  
*bitmap containing the backup triggers. Bit0: service not descrambled. other bits for future use.*

### 10.81.1 Detailed Description

Structure used to configure CAM backup.

Currently the backup trigger is not configurable. Service not descrambled condition is used to trigger CAM backup. Which services can trigger CAM backup is configured in [DescrSvcConfig\\_t](#).

Definition at line 28632 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.82 DCM::DeviceControl::DescrCAM\_Cfg\_t Struct Reference

Defines the configuration of the CAM itself.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrCAM\_Cfg\_t:

### Public Attributes

- [IPS\\_Ref\\_t CamRef](#)  
*CAM identification.*
- boolean [bEnabledSetting](#)  
*true: enable CAM. requires a license to enable.*
- boolean [bEnabledStatus](#)  
*readonly enabled status. Can be different from enabled setting if e.g. after reboot the necessary licenses are missing.*
- boolean [bResetOnFailure](#)  
*true: reset CAM if descrambling fails on all services False: do not reset. Default value is true.*
- unsigned short [MaxBitRate](#)  
*In Mbps. Range: 72 .. 200. Default: 72.*

## 10.82.1 Detailed Description

Defines the configuration of the CAM itself.

Definition at line 28505 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.83 DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t Struct Reference

Defines the configuration of the CAM itself.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrCAM\_Cfg\_V2\_t:

## Public Attributes

- [IPS\\_Ref\\_t](#) **CamRef**  
*CAM identification.*
- boolean **bEnabledSetting**  
*true: enable CAM. requires a license to enable.*
- boolean **bEnabledStatus**  
*readonly enabled status. Can be different from enabled setting if e.g. after reboot the necessary licenses are missing.*

- [DescriptorRuleList\\_t RulesList](#)

#### 10.87.1 Detailed Description

Definition at line 7843 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.88 DCM::DeviceControl::DescrResource\_t Struct Reference

Structure containing identification information about the descrambling resource.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrResource\_t:

### Public Attributes

- [DescrId\\_t DescrId](#)  
*"port number" of the descrambler.*
- [IPS\\_Ref\\_t Ref](#)  
*identification of descrambler in all other functions.*
- [eDescrType\\_t eDescrType](#)  
*type of descrambler*
- [string Name](#)  
*user friendly name of the descrambling resource. Default names are assigned by the [DCM](#), e.g. 'CAM 1', 'BISS'.*

#### 10.88.1 Detailed Description

Structure containing identification information about the descrambling resource.

All fields are read-only except the Name field.

Definition at line 28027 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.89 DCM::DeviceControl::DescrServiceData\_t Struct Reference

A structure with attributes of the service routed to the descrambler.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrServiceData\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t RefSvc](#)  
*identifies the service on the descrambler*
- [ServiceId\\_t ServiceID](#)  
*service ID (for future use)*
- [DvbString\\_t UserTag](#)  
*a human readable user tag for the service. By default equal to the name of the input service, but made unique if necessary by [DescrServiceAddL\(\)](#).*
- unsigned long [Property](#)  
*Read only Bitmap used by GUI to display < Bit 0: Service present at input (true) or not (false). < Bit 1: TRUE if service can't be deleted < Bit 2: TRUE if service is scrambled (before descrambling) < Bit 3: TRUE if service is being descrambled by descrambler. < Bit 4: TRUE if service is in backup < Bit 5: TRUE if Service Loss Alarm is active. < Bit 6: TRUE if not-descrambled alarm is active. < Bit 7: TRUE if service is part of a TS in SFN or TS mode. < Other bits for future use.*
- [IPS\\_Service\\_In\\_V2\\_t MainInputService](#)  
*main input service*
- [IPS\\_Service\\_In\\_V2\\_t ActiveInputService](#)  
*active input service, e.g. when in backup*

### 10.89.1 Detailed Description

A structure with attributes of the service routed to the descrambler.

Definition at line 28079 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.90 DCM::DeviceControl::DescrSvcConfig\_t Struct Reference

Defines how the service is descrambled.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrSvcConfig\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t RefSvc](#)  
*identifies the virtual service*
- [eDescrEnabledMode\\_t eEnabled](#)  
*identifies if and how descrambling must be done*
- boolean [bCamBuTrigger](#)  
*true: when not descrambled, this service*
- [ByteStream EvenSessionWord](#)  
*session word for BISS with even parity.*
- [ByteStream OddSessionWord](#)  
*session word for BISS with odd parity.*
- [DescrTrackingRuleList\\_t Components](#)  
*non-empty if component level descrambling*

#### 10.90.1 Detailed Description

Defines how the service is descrambled.

The session words are only required for BISS descrambling and when the session word is configured on service level. The session word on service level overrules the session word on TS level, but only for the service (identified by RefSvc).

Definition at line 28443 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.91 DCM::DeviceControl::DescrTrackingRule\_t Struct Reference

Defines a tracking rule for descrambling, including the BISS session word.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrTrackingRule\_t:

### Public Attributes

- [TrackingCriterium\\_t TrackingCriterium](#)
- [ByteStream EvenSessionWord](#)  
*session word for BISS descrambling with even parity.*
- [ByteStream OddSessionWord](#)  
*session word for BISS descrambling with odd parity.*

### 10.91.1 Detailed Description

Defines a tracking rule for descrambling, including the BISS session word.

The BISS session word is optional, e.g. can be left empty for configuration of descrambling on a CAM. The session word also can be left empty if the session word is configured on a higher level, e.g. service or TS level. A session word configured on component level overrules any session word on service level or TS level for that specific component.

Definition at line 28417 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.92 DCM::DeviceControl::DescrTS\_Data\_t Struct Reference

Structure with data of a TS added to a descrambler.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrTS\_Data\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)  
the TS reference assigned by [DescrTS\\_Add\(\)](#)
- unsigned long [Property](#)  
Read only Bitmap used by GUI to display < Bit 0: TS present at input (true) or not (false). < Bit 1: TRUE if TS can't be deleted < Bit 2: at least one of the source input PIDs of this < TS is scrambled < Bit 3: TRUE if TS Loss Alarm is active. < Other bits for future use.
- [IPS\\_RefTS\\_t RefInputTs](#)  
Read only : Reference to the input TS that was used to create the TS on the descrambler.
- [IPS\\_RefTS\\_t RefActiveTS](#)  
Read only : Reference of the active input TS (for TS backup).
- [DvbString\\_t UserTag](#)  
A human readable user tag for the TS. [DescrTS\\_Add](#) will assign a unique default value.

### 10.92.1 Detailed Description

Structure with data of a TS added to a descrambler.

Definition at line 28196 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.93 DCM::DeviceControl::DescrTS\_Data\_V2\_t Struct Reference

Structure with data of a TS added to a descrambler.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DescrTS\_Data\_V2\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)  
the TS reference assigned by [DescrTS\\_Add\(\)](#)
- unsigned long [Property](#)  
Read only Bitmap used by GUI to display < Bit 0: TS present at input (true) or not (false). < Bit 1: TRUE if TS can't be deleted < Bit 2: at least one of the source input PIDs of this < TS is scrambled < Bit 3: TRUE if TS Loss Alarm is active. < Other bits for future use.
- [IPS\\_RefTS\\_t RefInputTs](#)  
Read only : Reference to the input TS that was used to create the TS on the descrambler.
- [IPS\\_RefTS\\_t RefActiveTS](#)  
Read only : Reference of the active input TS (for TS backup).
- [DvbString\\_t UserTag](#)  
A human readable user tag for the TS. [DescrTS\\_Add](#) will assign a unique default value.
- boolean [TransparentSI](#)  
true: pass SI transparently (aka SFN mode) false: update SI (PMT, SDT, EIT) if descrambled (aka SI mode)  
default value is true

### 10.93.1 Detailed Description

Structure with data of a TS added to a descrambler.

**Version**

Release 12.0

Definition at line 28220 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.94 DCM::DeviceControl::DeviceBackupLink\_t Struct Reference**

Configuration of a link between 2 devices for use with Device Backup.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DeviceBackupLink\_t:

**Public Attributes**

- [IPS\\_Ref\\_t](#) **NetworkInterface**  
Specify *BoardNr* = 0 and *PortNr* = 0 for the 10/100 management network interface and *PortNr* = 1 for the GbE C/A network interface.
- string [PeerIPAddress](#)  
IP address of the other *DCM*, as reachable via the specified network interface.
- unsigned short [ProtocolUDPPort](#)  
UDP port to be used by both *DCM*'s. Must be the same on both *DCM*'s for this link.

**10.94.1 Detailed Description**

Configuration of a link between 2 devices for use with Device Backup.

The primary link is always mandatory when heartbeat is used.

Definition at line 21119 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.95 DCM::DeviceControl::DeviceBackupParams\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DeviceBackupParams\_t:

### Public Attributes

- [eDeviceRole](#) [DeviceRole](#)  
*Role of this device. Other settings are only valid if the role is not standalone.*
- [string](#) [PeerIPAddress](#)  
*IP Address of the other DCM.*
- [unsigned short](#) [ProtocolUDPPort](#)  
*UDP Port to be used by both DCM's. Must be the same value on both devices.*
- [IPS\\_Ref\\_t](#) [NetworkInterface](#)  
*Specify BoardNr = 0 and PortNr = 0 for the 10/100 management network interface and PortNr = 1 for the GbE C/A network interface.*
- [boolean](#) [Revertive](#)  
*True if the device should automatically revert to main when possible.*
- [unsigned long](#) [MainToBackupDelay](#)  
*Time in seconds to wait before switching to backup device, range 1-60 s.*
- [unsigned long](#) [BackupToMainDelay](#)  
*Time in seconds to wait before switching back to main device, range 0-60 s.*

### 10.95.1 Detailed Description

Definition at line 21135 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.96 DCM::DeviceControl::DeviceBackupParamsV2\_t Struct Reference

Following combinations of Roles and Modes are valid:

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DeviceBackupParamsV2\_t:

### Public Attributes

- [eDeviceRole\\_V2](#) [DeviceRole](#)  
*Role of this device.*
- [DeviceBackupLinkList\\_t](#) [Links](#)  
*Links towards peer (0 in case of standalone)*
- [eDBURevertMode](#) [RevertMode](#)  
*Revertive mode.*
- unsigned long [MainToBackupDelay](#)  
*Time in seconds to wait before switching to backup device or deactivating, range 1-60 s.*
- unsigned long [BackupToMainDelay](#)  
*Time in seconds to wait before switching back to main device or reactivating, range 0-60 s.*

### 10.96.1 Detailed Description

Following combinations of Roles and Modes are valid:

- Standalone: None
- Main/Backup: None, Revertive, Floating
- Single: None, Revertive
- Live-Live: Revertive

Definition at line 21166 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.97 DCM::DeviceCallback Interface Reference

```
import "DCM.idl";
```

### Public Types

- typedef sequence< long > [LongStream](#)  
A sequence of longs.
- typedef sequence< [LongStream](#) > [NotifDataList](#)

### Public Member Functions

- void [Notify](#) (in string NotificationName, in [NotifDataList](#) EventDataList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
Notifies changes in the server that can be used as trigger.

#### 10.97.1 Detailed Description

Definition at line 32193 of file DCM.idl.

The documentation for this interface was generated from the following file:

- [DCM.idl](#)

## 10.98 DCM::DeviceControl Interface Reference

The only interface of DCM to the outside world.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl:

### Classes

- struct [AC\\_t](#)  
Access Criteria.
- struct [AddPidsFromSplice\\_t](#)
- struct [AlarmTriggerRule\\_t](#)
- struct [AlternateSource\\_t](#)  
A definition of an alternate source.

- struct [AlternateSourceSettings\\_t](#)  
*All the settings concerning alternate sources for one output service.*
- struct [AltSrcBU\\_Setting\\_t](#)
- struct [AltSrcMergeActiveInSvc\\_t](#)
- struct [AltSrcMergedSetting\\_t](#)
- struct [ArpEntry\\_t](#)
- struct [ASI\\_BW\\_LimitData\\_t](#)
- struct [ASI\\_DTF\\_Ex\\_t](#)  
*Structure holding DTF input settings. The difference with the [ASI\\_DTF\\_t](#) structure is that this structure here doesn't hold the scrambling key directly. Instead, it holds a reference to a key in the list that can be set up using the [ASI\\_DTF\\_SetKeyList](#) method. Also the scrambling type can be selected to be odd or even.*
- struct [ASI\\_DTF\\_OutputTS\\_Ex\\_t](#)  
*Structure holding DTF output settings. The difference with the [ASI\\_DTF\\_OutputTS\\_t](#) is that this structure here provides for scrambling type, scrambling key indices and the possibility to overrule the input-level settings by one global setting.*
- struct [ASI\\_DTF\\_OutputTS\\_RDCS\\_t](#)  
*Structure holding DTF RDCS output settings. From V9.0 onwards.*
- struct [ASI\\_DTF\\_OutputTS\\_t](#)  
*Structure holding DTF output settings.*
- struct [ASI\\_DTF\\_RDCS\\_t](#)  
*Structure holding DTF RDCS input settings. From V9.0 onwards.*
- struct [ASI\\_DTF\\_ScramblingKey\\_t](#)
- struct [ASI\\_DTF\\_ScramblingKeyPair\\_t](#)  
*Structure holding DTF scrambling keys.*
- struct [ASI\\_DTF\\_t](#)  
*Structure holding DTF input settings.*
- struct [ASI\\_MirrorCfg\\_t](#)  
*Structure to define port mirroring for ASI.*
- struct [ASI\\_SFN\\_MKII\\_MDP\\_MultiplicationSettings\\_t](#)
- struct [ASI\\_SFN\\_MKII\\_RDCS\\_Settings\\_t](#)
- struct [ASI\\_SFN\\_MKII\\_TS\\_Output\\_Mode\\_t](#)
- struct [AsiFormatData\\_t](#)  
*Structure to set ASI format and output mode.*
- struct [BackupService\\_t](#)
- struct [BackupSrvTable\\_t](#)
- struct [BannerCfg\\_t](#)
- struct [BannerCfg\\_V2\\_t](#)
- struct [BitrateAlarmSetting\\_t](#)  
*Structure to pass payload and stuffing bitrate threshold alarm settings.*
- struct [BitRateMeasurement\\_t](#)  
*General structure to hold bitrate measurement data.*
- struct [BoardBitrateThreshold](#)  
*The bitrate threshold for video, audio and data service losses (board specific).*
- struct [BoardCfg\\_t](#)  
*Structure to get or set port information.*
- struct [BoardCfg\\_V2\\_t](#)  
*Structure to get or set port information.*
- struct [BoardDejitterCfg\\_t](#)

- struct [BoardFeatureUsage\\_t](#)  
*Contains the feature usage per board.*
- struct [BoardIdentification](#)  
*Information data as returned by [GetSystemId\(\)](#).*
- struct [BoardInfo\\_t](#)  
*Structure to return board configuration.*
- struct [BoardInfo\\_V2\\_t](#)  
*Structure to return board configuration.*
- struct [BoardTemperature\\_t](#)
- struct [ClearPidBitrates\\_t](#)
- struct [CofTrigger\\_t](#)  
*Structure used in the configuration of the triggers for card not operational failure alarms.*
- struct [Color\\_t](#)
- struct [CompactCaMode\\_t](#)  
*Compact CA descriptor setting (per input TS)*
- struct [ComponentMergeCriterium\\_t](#)
- struct [ComponentTag\\_t](#)
- struct [ComponentTemperature\\_t](#)
- struct [ComponentTrackRule\\_t](#)
- struct [ComponentTrackRule\\_V2\\_t](#)
- struct [CompPidES\\_t](#)  
*Identification of muxed pids.*
- struct [CompPidES\\_V2\\_t](#)
- struct [DCG\\_3D\\_pair\\_t](#)
- struct [DCG\\_AES\\_GeneratorConfig\\_t](#)
- struct [DCG\\_AudioPairInfo\\_t](#)
- struct [DCG\\_AudioSignalInfo\\_t](#)  
*Describes the audio signal information.*
- struct [DCG\\_BackupStream\\_t](#)
- struct [DCG\\_CompressionEnable\\_t](#)
- struct [DCG\\_GeneratorConfig\\_t](#)
- struct [DCG\\_HitlessSwitchOverEnable\\_t](#)
- struct [DCG\\_InputRTP\\_Stream\\_t](#)  
*Prior to version 9.10: Between 10 and 100 (default 60) A sequence of [DCG\\_InputTS\\_t](#) entries.*
- struct [DCG\\_InputRTP\\_Stream\\_V2\\_t](#)  
*Prior to version 9.10: Between 10 and 100 (default 60)*
- struct [DCG\\_InputRTP\\_Stream\\_V3\\_t](#)  
*Prior to version 9.10: Between 10 and 100 (default 60)*
- struct [DCG\\_InputTS\\_t](#)  
*Information of an incoming TS.*
- struct [DCG\\_JP2K\\_params\\_t](#)
- struct [DCG\\_JP2K\\_params\\_V2\\_t](#)
- struct [DCG\\_JP2K\\_params\\_V3\\_t](#)
- struct [DCG\\_OutputFecGBE\\_t](#)
- struct [DCG\\_OutputGBE\\_t](#)
- struct [DCG\\_OutputRTP\\_Stream\\_t](#)
- struct [DCG\\_OutputRTP\\_V2\\_Stream\\_t](#)
- struct [DCG\\_OutputTS\\_t](#)

*Information-Settings of an outgoing TS.*

- struct [DCG\\_Possible3GBoardCfg\\_t](#)
- struct [DCG\\_StreamBackupParams\\_t](#)
- struct [DCG\\_VBI\\_Defs\\_t](#)
- struct [Debug\\_DvbS2\\_InputTS\\_t](#)

*Information about a DVBS2 input TS, including the hardware index.*

- struct [Debug\\_Gbe\\_InputTS\\_t](#)
- struct [Debug\\_Gbe\\_OutputTS\\_t](#)

*Information-Settings of an outgoing TS.*

- struct [DefaultAutoPassRules](#)

*Default Service component behaviour.*

- struct [DefaultTrackRule\\_t](#)

*Structure for board default component tracking rules.*

- struct [DescrBISS\\_Cfg\\_t](#)

*Configuration of BISS descrambling.*

- struct [DescrCAM\\_BackupCfg\\_t](#)

*Structure used to configure CAM backup.*

- struct [DescrCAM\\_Cfg\\_t](#)

*Defines the configuration of the CAM itself.*

- struct [DescrCAM\\_Cfg\\_V2\\_t](#)

*Defines the configuration of the CAM itself.*

- struct [DescrCAM\\_Status\\_t](#)

*Structure containing information about a CAM.*

- struct [DescriptorData\\_t](#)
- struct [DescriptorRule\\_t](#)
- struct [DescriptorRuleSet\\_t](#)
- struct [DescrResource\\_t](#)

*Structure containing identification information about the descrambling resource.*

- struct [DescrServiceData\\_t](#)

*A structure with attributes of the service routed to the descrambler.*

- struct [DescrSvcConfig\\_t](#)

*Defines how the service is descrambled.*

- struct [DescrTrackingRule\\_t](#)

*Defines a tracking rule for descrambling, including the BISS session word.*

- struct [DescrTS\\_Data\\_t](#)

*Structure with data of a TS added to a descrambler.*

- struct [DescrTS\\_Data\\_V2\\_t](#)

*Structure with data of a TS added to a descrambler.*

- struct [DeviceBackupLink\\_t](#)

*Configuration of a link between 2 devices for use with Device Backup.*

- struct [DeviceBackupParams\\_t](#)
- struct [DeviceBackupParamsV2\\_t](#)

*Following combinations of Roles and Modes are valid:*

- struct [DPI\\_ChannelName\\_t](#)

*A spliceable channel name.*

- struct [DPI\\_ChannelSettings2\\_t](#)
- struct [DPI\\_ChannelSettings3\\_t](#)

- struct [DPI\\_ChannelSettings\\_t](#)
- struct [DPI\\_ChannelStatus\\_t](#)
- struct [DPI\\_CueRequest\\_t](#)
- struct [DPI\\_PidCouple\\_t](#)
- struct [DPI\\_PmtSpliceModeSetting\\_t](#)  
*Struct to set/get ePMT\_SpliceMode per channel.*
- struct [DPI\\_ShortChannelStatus\\_t](#)
- struct [DPI\\_SpliceRequest\\_t](#)
- struct [DPI\\_SpliceRequestTime\\_t](#)  
*A splice request is supposed to arrive a few seconds in advance of the actual splice time.*
- struct [DPI\\_Time\\_t](#)  
*UTC since jan 1 1970.*
- struct [DvbS2\\_InputTS\\_t](#)  
*DvbS2 information of an incoming DVB-S2 input stream.*
- struct [DvbS2\\_LookupTS\\_t](#)  
*Structure to find a specific TS by port and input stream identifier.*
- struct [DvbS2\\_RefTS\\_t](#)  
*Structure containing the looked-up transport stream for a given lookupTS.*
- struct [EasConfig\\_t](#)  
*Represents the configuration of an EAS proxy.*
- struct [EMM\\_Data\\_t](#)  
*Identification of EMMG EMMs.*
- struct [End2End\\_Delay\\_t](#)
- struct [EndDeviceEntry\\_t](#)
- struct [ES\\_TypeSetting\\_t](#)
- struct [EsEntry\\_t](#)
- struct [ETTV\\_ContentData\\_t](#)  
*Structure that contains status about the Content of an ETTV.*
- struct [ETTV\\_ContentSetting\\_t](#)  
*Structure combining service-id with settings.*
- struct [ETV\\_ApplicationIdent\\_t](#)
- struct [ETV\\_EissFilter\\_t](#)
- struct [ETV\\_Insertion\\_Settings\\_t](#)
- struct [ETV\\_Insertion\\_Settings\\_V2\\_t](#)
- struct [ETV\\_ManipulationSettings\\_t](#)
- struct [ETV\\_ManipulationSettings\\_V2\\_t](#)
- struct [ETV\\_Primary\\_Settings\\_t](#)
- struct [ETV\\_Primary\\_Settings\\_V2\\_t](#)
- struct [ExtIpServiceCtrl](#)
- struct [FCS\\_Scte35\\_CommandSelect\\_t](#)
- struct [Feature\\_t](#)
- struct [FeatureUsage\\_t](#)  
*Represents the license usage count per feature.*
- struct [FEC\\_Dec\\_Setting\\_t](#)  
*FEC decoder settings.*
- struct [FEC\\_Dec\\_Statistics\\_t](#)  
*FEC decoder statistics.*
- struct [FEC\\_Dec\\_Status\\_t](#)

- *FEC decoder status.*
- struct [FEC\\_Enc\\_ErrorGen\\_t](#)
- *FEC error generation parameters.*
- struct [FEC\\_Enc\\_Overhead\\_t](#)
- *Bitrate overhead, due to FEC encoding.*
- struct [FEC\\_Enc\\_Setting\\_t](#)
- *FEC encoder settings.*
- struct [FEC\\_Enc\\_Setting\\_V2\\_t](#)
- *FEC encoder settings.*
- struct [FontCfg\\_t](#)
- struct [ForbiddenPidRange\\_t](#)
- struct [GbEFramesRecv\\_t](#)
- struct [GbEFramesTrans\\_t](#)
- struct [GbeIO\\_IP\\_Settings\\_t](#)
- struct [GbEPortStatsEntry\\_t](#)
- struct [GbEStatisticsEntry\\_t](#)
- struct [GPI\\_Settings\\_t](#)
- struct [GPI\\_StatusControl\\_t](#)
- struct [GPS\\_Settings\\_t](#)
- struct [GPS\\_Status\\_t](#)
- struct [HitlessMergeSetting\\_t](#)
- *Hitless merge input TS settings.*
- struct [IGMPv2MulticastGroup\\_t](#)
- struct [IGMPv3Group\\_t](#)
- struct [IIOP\\_SubTable\\_t](#)
- *Structure containing the properties a SubTable provisioned via IIOP.*
- struct [InEMM\\_Ref\\_t](#)
- *Identification of which PID to be created/deleted. Note this is duplicated by RefPid\_t but must remain for backwards compatability.*
- struct [InPID\\_Data\\_t](#)
- *Identification of which PID to be (un)blocked.*
- struct [InPort\\_8VSB\\_Config\\_t](#)
- *Represents the 8VSB input port specific settings.*
- struct [InPort\\_8VSB\\_Statistics\\_t](#)
- *Defines the statistics that can be retrieved per 8VSB input port.*
- struct [InPort\\_8VSB\\_TuningParams\\_t](#)
- *Tuning parameters for an 8VSB input port.*
- struct [InPort\\_DvbS2\\_Counters\\_t](#)
- *Structure containing the different counters per DVB S2 port.*
- struct [InPort\\_DvbS2\\_LncCfg\\_t](#)
- *Structure used to configure the DVB S2 LNC.*
- struct [InPort\\_DvbS2\\_PortConfig\\_t](#)
- *Structure used to configure single stream or multi-stream mode per port.*
- struct [InPort\\_DvbS2\\_Status\\_t](#)
- *Structure used to retrieve status information of a DVB S2 port.*
- struct [InPort\\_DvbS2\\_TunerCfg\\_t](#)
- *Structure used to configure the DVB S2 tuner.*
- struct [InTS\\_AES\\_Statistic\\_t](#)

- struct [InTS\\_CompactCaMode\\_t](#)  
*Compact CA descriptor settings for specific TS.*
- struct [InTS\\_FEC\\_Dec\\_DefRuleSetting\\_t](#)  
*FEC decoder default rule settings.*
- struct [InTS\\_FEC\\_Dec\\_Setting\\_t](#)  
*FEC encoder settings for specific TS.*
- struct [InTS\\_FEC\\_Dec\\_Statistics\\_t](#)  
*FEC decoder statistics for specific TS.*
- struct [InTS\\_FEC\\_Dec\\_Status\\_t](#)  
*FEC decoder status for specific TS.*
- struct [InTS\\_HitlessMergeSetting\\_t](#)  
*Hitless merge settings for specific TS.*
- struct [InTS\\_IPI\\_Settings\\_t](#)  
*Information to change the IndexPacketInterpreter settings of an incoming TS.*
- struct [InTS\\_PriorityBit\\_t](#)  
*Information to change the priority bit of the MPEG packets of an incoming TS.*
- struct [InTS\\_Statistic\\_t](#)
- struct [InTS\\_TimeBaseSelectionMode\\_t](#)
- struct [InTS\\_TimeBaseSelectionMode\\_V2\\_t](#)
- struct [InTsExistenceReasons\\_t](#)  
*Input Transport stream reason for existence bitmap.*
- struct [IP\\_Route\\_t](#)
- struct [IP\\_Route\\_t\\_V2](#)
- struct [IP\\_Subnet\\_t](#)
- struct [IpCfg\\_t](#)
- struct [IPI\\_Settings\\_t](#)
- struct [IPS\\_ChangeInputTS\\_t](#)  
*Information to change an incoming TS.*
- struct [IPS\\_Gbe\\_InputTS\\_t](#)  
*Gbe information of an incoming TS.*

- struct [IPS\\_OutServiceSync\\_V2\\_t](#)
- struct [IPS\\_OutTS\\_RTP\\_t](#)
- struct [IPS\\_Ref\\_t](#)  
*General location of a physical or virtual port.*
- struct [IPS\\_ReferenceTS\\_t](#)  
*Structure to find a specific TS by IP-address and UDP port.*
- struct [IPS\\_RefPid\\_t](#)  
*Note RefPid\_t is effectively a copy of [InEMM\\_Ref\\_t](#) but that must remain for compatability.*
- struct [IPS\\_RefSvc\\_t](#)  
*A reference to a service.*
- struct [IPS\\_RefTS\\_t](#)  
*General location of a TS.*
- struct [IPS\\_SDT\\_Data\\_t](#)  
*Structure that contains data about the Service Description Table of a service.*
- struct [IPS\\_Serv\\_Dest\\_t](#)
- struct [IPS\\_Service\\_In\\_t](#)  
*Incoming service information.*
- struct [IPS\\_Service\\_In\\_V2\\_t](#)  
*A definition of an input service as used on the output.*
- struct [IPS\\_Service\\_t](#)  
*SID reference.*
- struct [IPS\\_ServiceData\\_Out\\_t](#)
- struct [IPS\\_ServiceData\\_Out\\_V2\\_t](#)  
*Extended information about an output service.*
- struct [IPS\\_ServiceData\\_Out\\_V3\\_t](#)  
*Extended information about an output service.*
- struct [IPS\\_UDP\\_Socket\\_t](#)  
*The socket describes the IP address & UDP port on which a TS is played out.*
- struct [IPSecHost](#)
- struct [IpServiceDisplayData](#)  
*Description of an active or listening port.*
- struct [JclInitialValue\\_t](#)  
*JCL initial value for Hitachi.*
- struct [JclSystemId\\_t](#)  
*JCL system ID for Hitachi.*
- struct [LicenseValidation\\_t](#)
- struct [LogoCfg\\_t](#)

- struct [LogoCfgFileNumber\\_t](#)
- struct [MaximumLogoSize\\_t](#)
- struct [MergeCriterium\\_t](#)
- struct [MergedESDescriptorData\\_t](#)
- struct [MessageBufferInfo](#)
- struct [MessageSetting](#)
  - Message settings.*
- struct [MFPB\\_AAC\\_AudioSettings\\_t](#)
  - AAC audio processing settings.*
- struct [MFPB\\_AacAudioCfg\\_t](#)
  - Configuration settings for the AAC audio settings of a service.*
- struct [MFPB\\_AudioDecode\\_t](#)
  - Audio decode settings together with fields identifying the Audio component they're for.*
- struct [MFPB\\_AudioDecodeCfg\\_t](#)
- struct [MFPB\\_AudioDecodeExtraAACCfg\\_t](#)
  - Configuration for extra AAC decoder settings per service.*
- struct [MFPB\\_AudioDecodeExtraAACSettings\\_t](#)
  - Extra AAC decoder settings per audio ES.*
- struct [MFPB\\_AudioDecodeExtraDolbyCfg\\_t](#)
  - Configuration for extra Dolby decoder settings per service.*
- struct [MFPB\\_AudioDecodeExtraDolbySettings\\_t](#)
  - Extra Dolby decoder settings per audio ES.*
- struct [MFPB\\_AudioDecodeExtraMPEGL2Cfg\\_t](#)
  - Configuration for extra MPEG1-L2 decoder settings per service.*
- struct [MFPB\\_AudioDecodeExtraMPEGL2Settings\\_t](#)
  - Extra MPEG1-L2 decoder settings per audio ES.*
- struct [MFPB\\_AudioEncode\\_t](#)
  - Audio encode settings together with field identifying the Audio component they're for.*
- struct [MFPB\\_AudioEncodeCfg\\_t](#)

- struct [MFPB\\_VideoServiceInformation\\_t](#)
- struct [MFPB\\_VideoStatus\\_t](#)
- struct [MIP\\_Settings\\_t](#)
- struct [MIP\\_SyncTargetSettings\\_t](#)

- struct [MM\\_ID\\_t](#)  
*Alarm reference (M&M, 1:1 device backup).*
- struct [MM\\_Measurement](#)
- struct [MM\\_MeasurementStat](#)
- struct [MM\\_Message](#)
- struct [MM\\_MessageMainPart](#)  
*Structure to pass Messages from the device to whatever client.*
- struct [MM\\_MessageSetting](#)  
*Measurement message settings.*
- struct [MM\\_MessageTypeErrorInterval](#)
- struct [MM\\_MessageTypeSetting](#)  
*Message type settings.*
- struct [MM\\_TypeInfo](#)
- struct [MM\\_TypeInfo\\_V2](#)  
*V2 of [MM\\_TypeInfo](#): BackupTriggerMethod is added.*
- struct [ModuleExceptionTrace\\_t](#)  
*Structure to get or set Debug Trace Level information.*
- struct [MultipleStringElement\\_t](#)
- struct [MultipleStringSegment\\_t](#)  
*Multiple String: ATSC string representation.*
- struct [NegotiatedGbePortSpeed\\_t](#)
- struct [NicTeam\\_MemberStatus\\_t](#)  
*Structure describing the status of a NIC team member.*
- struct [NicTeam\\_Settings](#)  
*Structure to get or set NIC team configuration.*
- struct [NicTeamStatus](#)  
*Structure to get NIC team status.*
- struct [NotifData\\_t](#)
- struct [NTP\\_Info\\_t](#)
- struct [NTP\\_Stats\\_t](#)
- struct [OutputTsLossTriggerBitmapPerTs\\_t](#)
- struct [OutputTsLossTriggerPerTs\\_t](#)
- struct [OutTS\\_AlarmSetting\\_t](#)  
*Structure to pass payload and stuffing bitrate threshold alarm settings to one specific TS.*
- struct [OutTS\\_FEC\\_Enc\\_DefSetting\\_t](#)  
*Default FEC encoder settings (to be applied for new TS's)*
- struct [OutTS\\_FEC\\_Enc\\_ErrorGen\\_t](#)  
*FEC error generation for specific TS.*
- struct [OutTS\\_FEC\\_Enc\\_Overhead\\_t](#)  
*Bitrate overhead for specific TS.*
- struct [OutTS\\_FEC\\_Enc\\_Setting\\_t](#)  
*FEC encoder settings for specific TS.*
- struct [OutTS\\_FEC\\_Enc\\_Setting\\_V2\\_t](#)  
*FEC encoder settings for specific TS.*
- struct [OutTS\\_InsertCATDescriptors\\_t](#)
- struct [OutTS\\_NitInPat\\_t](#)  
*NIT in PAT setting for specific TS.*

- struct [OutTS\\_PsipEitStartPid\\_t](#)
- struct [OutTS\\_PsipEttStartPid\\_t](#)
- struct [OutTS\\_PsipEttvPid\\_t](#)
- struct [OutTS\\_SrcAddr\\_t](#)

*Source Address parameters for an OutTS.*

- struct [OutTS\\_SrcAddr\\_V2\\_t](#)
- struct [OutTS\\_SttTimeZone\\_t](#)

*Transport stream specific STT time zone setting.*

- struct [OutTS\\_TOS\\_t](#)
- struct [OutTS\\_TTL\\_t](#)
- struct [OutTS\\_UdpSize\\_t](#)
- struct [OutTS\\_VBR\\_t](#)
- struct [OutTS\\_VLAN\\_t](#)
- struct [OutTsServiceLocationAdded\\_t](#)

*Transport stream specific "Service Location Added" setting parameters.*

- struct [OutTsStandard\\_t](#)

*Transport stream specific Output TS Standard setting parameters.*

- struct [PacketIndexerSettings\\_t](#)
- struct [PcrSetting\\_t](#)
- struct [PCTM\\_PacketCounters\\_t](#)

*Packet counter values.*

- struct [PCTM\\_StreamPacketCounters\\_t](#)

*Packet counters of one stream.*

- struct [PCTM\\_StreamThresholdSettings\\_t](#)

*Threshold settings for the packet types of one stream.*

- struct [PCTM\\_ThresholdValues\\_t](#)

*Threshold settings.*

- struct [PortFilter\\_t](#)
- struct [PortTsSvcProps\\_t](#)
- struct [PriorityBitMode\\_t](#)

*Compact CA descriptor setting (per input TS)*

- struct [PSIGSubTable\\_t](#)

*Structure that describes a PSIG provision.*

- struct [PsipMgtInfo\\_t](#)
- struct [PsipUpdateLocation\\_t](#)
- struct [PsipUpdateRule\\_t](#)

*Definition of a PsipUpdate Rule Rule: number uniquely defining a rule 0: Add/update descriptor 2: Remove descriptor (this list should be updated when more rules are supported) RuleName: actual meaning of the rule (see above) Location: 0x02, 0xFFFFFFFF: PMT 0xCB, start-time: PsipEIT event RuleData: extra data of rule in readable form (UTF-8): Add/update descriptor: new descriptor in hex-string.*

- struct [Ref\\_SI\\_table\\_ext\\_t](#)
- struct [RefProcessorEngineUnit\\_t](#)

*Identify a processing engine unit of a processor board.*

- struct [ResourcesLoad\\_t](#)

*Resource loads.*

- struct [RestoreOption](#)

*Single settings restore option.*

- struct [RestoreOption\\_V2](#)

*Single settings restore option.*

- struct [RipBoardSettings](#)
- struct [RipInterfaceSettings](#)
- struct [RipSettings\\_t](#)
- struct [RipTsSettings\\_t](#)
- struct [RMX\\_GroupSettings\\_t](#)

*Realignment Mux group settings.*

- struct [RMX\\_GroupSvc\\_t](#)

*A service that is part of a Realignment Mux group.*

- struct [RMX\\_GroupSvcs\\_t](#)

*A set of services belonging to the same Realignment Mux group.*

- struct [RoutingData\\_t](#)
- struct [RoutingStatusRecord\\_t](#)

*Structure that contains information about one error that occurred during routing file upload (pre-config - IPS\_ProcessRoutingFile)*

- struct [ScriptEntry\\_t](#)
- union [Scte35CommandAndData\\_t](#)

*Union containing data structures of SCTE-35 commands.*

- struct [Scte35Data\\_DCM\\_input\\_switch\\_t](#)

*The data struct for SCTE-35 command eDCM\_input\_switch.*

- struct [Scte35Data\\_Keyer\\_config\\_t](#)

*The data struct for SCTE-35 command eKeyer\_config.*

- struct [Scte35Data\\_Keyer\\_t](#)

*The data struct for SCTE-35 command eKeyer\_on\_or\_off.*

- struct [Scte35Data\\_Local\\_avail\\_t](#)

*The data struct for SCTE-35 command eLocal\_avail\_enable\_or\_disable.*

- struct [Scte35Data\\_Logo\\_enable\\_t](#)

*The data struct for SCTE-35 command eLogo\_enable\_or\_disable.*

- struct [Scte35Data\\_Network\\_active\\_t](#)

*The data struct for SCTE-35 command eNetwork\_feed\_active\_or\_inactive.*

- struct [Scte35Data\\_REDUS\\_Switch\\_Single\\_t](#)

*The data struct for SCTE-35 command eREDUS\_switch\_single.*

- struct [Scte35Data\\_REDUS\\_Switch\\_t](#)

*The data struct for SCTE-35 command eREDUS\_switch.*

- struct [Scte35Data\\_Select\\_now\\_t](#)

*The data struct for SCTE-35 command eSelect\_now.*

- struct [Scte35Source\\_t](#)
- struct [Scte35ToggleOutOfNetwork\\_t](#)
- struct [SelectionListEntry\\_t](#)
- struct [Service\\_AutoPassRules](#)

*Service component behaviour.*

- struct [ServiceBackupParams2\\_t](#)
- struct [ServiceBackupParams\\_t](#)
- struct [ServiceBitRateMeasurement\\_t](#)
- struct [ServiceBitRateSample\\_t](#)
- struct [ServiceBlockCAInfo\\_t](#)

*Outgoing service information.*

- struct [ServiceCompBitRateMeasurement\\_t](#)

- struct [ServiceCompSettings\\_t](#)
- struct [ServiceES\\_t](#)
- struct [ServiceLossTrigger\\_t](#)
- struct [ServicePIDStatus\\_t](#)

*Identification of the service(s) to (un)block PIDs in.*

- struct [SI\\_AutoPassRules\\_t](#)
- struct [SI\\_Table\\_GenerationMode\\_t](#)

*Generation mode for SI tables.*

- struct [SI\\_Table\\_Period\\_t](#)
- struct [SlateData\\_t](#)
- struct [SlateService\\_t](#)
- struct [SMX36\\_AlgorithmIdentifier\\_t](#)
- struct [SMX36\\_Community\\_t](#)
- struct [SMX36\\_Encoder\\_t](#)
- struct [SMX36\\_NetworkQoS\\_t](#)
- struct [SMX36\\_Pool\\_t](#)
- struct [SMX36\\_Pool\\_V2\\_t](#)
- struct [SMX36\\_StatmuxController\\_t](#)
- struct [SMX36\\_VSE\\_CalculatedRates\\_t](#)
- struct [SMX36\\_VSE\\_t](#)
- struct [SMX36\\_VSE\\_V2\\_t](#)

*Implemented in V9.10.*

- struct [SMX36\\_VSE\\_V3\\_t](#)

*Implemented in V10.20.*

- struct [SMX36\\_VSE\\_V4\\_t](#)

*Implemented in V11.00.*

- struct [SMX36\\_VSEBackup\\_t](#)
- struct [SMX36\\_VSEBackup\\_V2\\_t](#)
- struct [SMX36\\_VSEParams\\_t](#)
- struct [SMX36\\_VSEParams\\_V2\\_t](#)

*For URC mode (planned 10.20)*

- struct [SMX\\_Encoder\\_t](#)
- struct [SMX\\_EncRef\\_t](#)
- struct [SMX\\_EncVideoBitRate\\_t](#)
- struct [SMX\\_MFP\\_Group\\_Svc\\_t](#)

*Services in a group.*

- struct [SMX\\_MFP\\_Group\\_SvcSettings\\_t](#)

*Service settings within a group.*

- struct [SMX\\_MFP\\_Group\\_SvcSettings\\_V2\\_t](#)

*Service settings within a group.*

- struct [SMX\\_MFP\\_Group\\_TSs\\_t](#)

*List of TS on a Statmux group, used for deleting TS from gorup.*

- struct [SMX\\_MFP\\_Group\\_TSSettings\\_t](#)

*List of TS settings on Statmux group Can be used to add/get TS to/from a group.*

- struct [SMX\\_MFP\\_GroupSettings\\_t](#)

*Statmux group settings The Type of the SMXGroup is important concerning further behavior and meanings of the different fields.*

- struct [SMX\\_MFP\\_SvcSettings\\_t](#)

*Statmux setting of a service.*

- struct [SMX\\_MFP\\_SvcSettings\\_V2\\_t](#)

*Statmux setting of a service, Version 2.*

- struct [SMX\\_MFP\\_TsSettings\\_t](#)

*Data linked with a TS in statmux context.*

- struct [SMX\\_Pool\\_Calculate\\_t](#)
- struct [SMX\\_PoolRef\\_t](#)
- struct [SMX\\_Service\\_t](#)
- struct [SMX\\_ServiceRef\\_t](#)
- struct [SMX\\_StatMuxPool](#)
- struct [SMX\\_StatMuxPool\\_V2](#)
- struct [SNMPCCommunity](#)

*SNMP read or write community settings.*

- struct [SrcAddr\\_t](#)

*Structure to specify some Ip header parameters for outgoing GbE packets.*

- struct [Svc\\_PsipEitRegenerationInfo\\_t](#)

*Structure combining service information with the number of regenerated PSIP-EIT subtables.*

- struct [Svc\\_PsipEttRegenerationInfo\\_t](#)

*Structure combining service information with the number of regenerated PSIP-ETT subtables.*

- struct [SvcOutES\\_TypeSetting\\_t](#)
- struct [SvcOutPsipUpdateRule\\_t](#)
- struct [SvcOutStreamingSetting\\_t](#)
- struct [Table\\_Sync\\_Info\\_t](#)

*Structure defining the parameters for time sync via SI table acquisition.*

- struct [TableGenerationData\\_t](#)
- struct [TableGenerationData\\_V2\\_t](#)
- struct [TableKeys\\_t](#)
- struct [TableKeysExt\\_t](#)

- struct [TC\\_PipCfg\\_t](#)
- struct [TC\\_PipSettings\\_t](#)
- struct [TC\\_PossibleBoardCfg\\_t](#)
- struct [TC\\_PossibleBoardCfg\\_V2\\_t](#)

*Structure to get possible board configurations for a transcoder board.*

- struct [TC\\_Question\\_t](#)
- struct [TC\\_ServiceBannerStatus\\_t](#)
- struct [TC\\_ServiceCfg\\_t](#)
- struct [TC\\_ServiceComponents\\_t](#)
- struct [TC\\_ServiceData\\_t](#)

*Structure with service data for a transcoder board.*

- struct [TC\\_ServiceDataV2\\_t](#)

*Structure with service data for a transcoder board.*

- struct [TC\\_ServiceLogoCfgID\\_t](#)
- struct [TC\\_ServiceLogoDisplay\\_t](#)
- struct [TC\\_ServiceTrackingID\\_t](#)
- struct [TC\\_Svc\\_CaptionInfo\\_t](#)

*Configuration settings for the Caption Service Descriptor(s) of a service.*

- struct [TC\\_Video\\_t](#)

*Video transcode settings together with fields identifying the video component they're for.*

- struct [TC\\_VideoCfg\\_t](#)
- struct [TC\\_VideoDecode\\_t](#)

*Video decode settings together with fields identifying the video component they're for.*

- struct [TC\\_VideoDecodeCfg\\_t](#)
- struct [TC\\_VideoEncode\\_t](#)

*Video encode settings together with field identifying the video component they're for.*

- struct [TC\\_VideoEncodeCfg\\_t](#)
- struct [TC\\_VideoEncodeSettings\\_t](#)

*Video encode settings.*

- struct [TC\\_VideoInformation\\_t](#)
- struct [TC\\_VideoResolution\\_t](#)
- struct [TC\\_VideoServiceInformation\\_t](#)
- struct [TC\\_VideoSettings\\_t](#)

*Video transcode settings.*

- struct [TC\\_VideoStatus\\_t](#)
- struct [TempLicenseData](#)
- struct [TierAC\\_t](#)

*Access criteria for tier based scrambling.*

- struct [TierData\\_t](#)

*Tier data.*

- struct [Time](#)

*Structure to supply date and time information.*

- struct [TimeBaseSelectionMode\\_t](#)
- struct [TimeBaseSelectionMode\\_V2\\_t](#)

- struct [TOT\\_Timezone\\_t](#)  
*Structure that represents required data to construct TOT descriptor.*
- struct [TR\\_AudioLevel\\_t](#)
- struct [TR\\_BitrateLimits\\_t](#)  
*Min - max bitrate boundaries used for service.*
- struct [TR\\_BitRateMeasurement\\_t](#)
- struct [TR\\_DelayMode\\_t](#)
- struct [TR\\_DelayMode\\_V2\\_t](#)
- struct [TR\\_GroupID\\_t](#)  
*Used for referencing transrater staging groups.*
- struct [TR\\_GroupServiceSettings\\_t](#)
- struct [TR\\_GroupServiceSettings\\_V2\\_t](#)
- struct [TR\\_GroupSettings\\_t](#)  
*Used to create and change transrater staging groups.*
- struct [TR\\_ResourceCountingLoads\\_t](#)  
*Calculated loads on TR board available for user.*
- struct [TR\\_ResourceCountingSettings\\_t](#)  
*Settings needed to calculate different loads on TR board which can be modified by user.*
- struct [TR\\_Service\\_t](#)  
*Identifies an output service in a transrater staging context.*
- struct [TR\\_ServiceAudioLevel\\_t](#)
- struct [TR\\_ServiceSettings\\_t](#)  
*Transrater specific service settings.*
- struct [TR\\_ServiceSettings\\_V2\\_t](#)  
*Transrater specific service settings V2.*
- struct [TR\\_TSAdd\\_t](#)  
*Used to couple output transport stream(s) to a transrater group.*
- struct [TR\\_TsDelay\\_t](#)  
*TS Delay settings.*
- struct [TR\\_TSSettings\\_t](#)  
*Represents an output transport stream in a transrater staging context.*
- struct [TrackingCriterium\\_t](#)
- struct [TrapDestination](#)  
*SNMP trap destination settings.*
- struct [TRBitRateSample\\_t](#)
- struct [TS\\_AutoPassRules](#)  
*MPTS pass through settings.*
- struct [TS\\_AutoPassRulesDisableFlags](#)  
*MPTS Passthrough disable flags.*

### Public Member Functions

- void [SetSynchronizationType](#) (in [eClock\\_Sync\\_Type](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Set the synchronization type.*
- void [SetSynchronizationType\\_V2](#) (in [eClock\\_Sync\\_Type\\_V2](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Set the synchronization type.*
- void [GetSynchronizationType](#) (out [eClock\\_Sync\\_Type](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the synchronization type.*
- void [GetSynchronizationType\\_V2](#) (out [eClock\\_Sync\\_Type\\_V2](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the synchronization type.*
- void [SetClock](#) (in [Time](#) CurrentTime, in long OffsetMinutes) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Set date, time and timezone.*
- void [SetClock2](#) (in [Time](#) CurrentTime, in string TimeZone) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Set date and time.*
- [Time](#) [GetClock](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get system date and time in the GMT timezone.*
- void [GetClock2](#) (out [Time](#) CurrentTime, out string Timezone) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get system date, time and timezone.*
- void [SetNTPServers](#) (in [IP\\_List\\_t](#) IPAddresses) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Set the list of NTP servers to be used by DCM.*
- void [GetNTPServers](#) (out [IP\\_List\\_t](#) IPAddresses) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the list of NTP servers in use by DCM.*
- [NTP\\_Info\\_List\\_t](#) [GetNTPStatistics](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the NTP statistics.*

- void [SetTableTimeSync](#) (in unsigned long MonitoringInterval, in [Table\\_Sync\\_Info\\_List\\_t](#) SyncList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the necessary parameters for time sync using SI table acquisition and syncs the time.*

- void [GetTableTimeSync](#) (out unsigned long MonitoringInterval, out [Table\\_Sync\\_Info\\_List\\_t](#) SyncList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the parameters used for time sync via SI table acquisition.*

- void [SyncNowOnTimeTable](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Will force an immediate time sync by starting immediate acquisition of the configured SI Table.*

- void [LogOn](#) (in [ClientType](#) Type, in string ClientName, in string Password, in string SecurityKey, out long ClientUniqueNumber) raises (MaxClientsReached, Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Log on, needed to perform most of the operations.*

- void [LogOnForNotif](#) (in long ClientUniqueNumber) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Log on to the notification channel, needed to receive notifications.*

- void [LogOnForNotif2](#) (in long ClientUniqueNumber) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Second version of [LogOnForNotif\(\)](#): [LogOnForNotif2](#).*

- void [LogOnForNotif3](#) (in long ClientUniqueNumber, in [ByteStream](#) ObjectKey) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Third version of [LogOnForNotif\(\)](#): [LogOnForNotif3](#).*

- void [Register](#) (in string ClientName, in string NotificationName) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Register for a notification.*

- void [UnRegister](#) (in string ClientName, in string NotificationName) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Unregister for a notification (see [Register\(\)](#)).*

- void [GetNotifList](#) (out [NotifList\\_t](#) NotifList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the list of available notifications.*

- void [LogOff](#) (in string ClientName) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Log off, stop being able to perform most of the operations.*

- void [IsAlive](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Check whether application is reachable via IIOP.*

- [eSystemStartup IsSystemReady](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Check whether application is started up completely.*

- unsigned long [GetUptime](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Return the System Uptime, this is the total running time since manufacture of the chassis.*

- void [GetSystemType](#) (out [eSystemType](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Make difference between possible applications running on the DCM platform.*

- void [GetSystemType\\_V2](#) (out [eSystemType\\_V2](#) Type) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Make difference between possible applications running on the DCM platform.*

- void [GetDeviceType](#) (out [eDeviceType](#) Type) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Make difference between possible device types.*
- void [IdentifyMe](#) (in long Duration) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Make it possible to identify a DCM by the LEDs.*
- [TrapDestinationList GetSNMPTrapDest](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the list of SNMP trap destinations.*
- void [AddSNMPTrapDest](#) (in [TrapDestination](#) Destination) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Either add a new or modify an existing SNMP trap destination.*
- void [RemoveSNMPTrapDest](#) (in string IPAddress) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Remove the specified SNMP trap destination.*
- [SNMPCommunityList GetSNMPCommunities](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get all configured SNMP communities.*
- void [AddSNMPCommunity](#) (in [SNMPCommunity](#) Community) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Add a new SNMP community or modify an existing SNMP community.*
- void [RemoveSNMPCommunity](#) (in string Community) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Remove one SNMP Community entry.*
- void [SetSNMP\\_MystroTrapsEnabled](#) (in boolean bEnabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)  
*Enable/Disable sending of Mystro MIB traps (addservice etc)*
- void [GetSNMP\\_MystroTrapsEnabled](#) (out boolean bEnabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Query whether sending of Mystro MIB traps is enabled.*
- [BoardIdentification GetSystemId](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the system version information.*
- void [SetSystemName](#) (in string Name) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the system unit name.*
- long [GetNbrOfSlots](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the number of boards that a device can have, including mainboard.*
- [PresenceStatus IsBoardPresent](#) (in long SlotNbr) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Measure the presence of a board on a particular board location the SlotNbr ranges from 1 to NbrOfSlots.*
- [BoardIdentification GetBoardId](#) (in long SlotNbr) raises (TimeOut, OutOfRange, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the boardtype information This call returns input, output, processor, etc.*
- [BoardIdentificationList GetBoardIdExt](#) (in long SlotNbr) raises (TimeOut, OutOfRange, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the extended boardtype information This call returns a list of BoardIdentifications: input, output, processor, etc.*

- void [GetUniqueDeviceId](#) (in unsigned short BoardNr, out [UniqueDeviceIdList\\_t](#) UniqueDeviceIdList) raises (Timeout, OutOfRange, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the unique device identity information This call returns information which can be shown on the GUI.*
- void [SetUserName](#) (in long SlotNbr, in string UserName) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the user-defined name of a board.*
- void [RebootDCM](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [eRebootType](#) RebootType) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Reboot the DCM or a board Single board reboots are only supported for active IP Adapter Video cards.*
- void [LOG\\_SetLTM](#) (in [IPS\\_Ref\\_t](#) RefPhys, in unsigned long level, in unsigned long type, in unsigned long mid) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Deprecated.*
- void [GetModuleTraceLevel](#) (in unsigned short BoardNumber, out [eTraceLevel](#) TraceLevel, out [ModuleExceptionTraceList\\_t](#) ModuleExceptionTraceList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the current Trace level and the list of Module names and Modules Id's.*
- void [SetModuleTraceLevel](#) (in unsigned short BoardNumber, in [eTraceLevel](#) TraceLevel, in [ModuleExceptionTraceList\\_t](#) ModuleExceptionTraceList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the current Trace level and enable/disable a list of modules.*
- void [IDL\\_Trace](#) (in unsigned short BoardNumber, in string LogTraces) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Log a string in the trace of a specific board.*
- [BoardInfo\\_List\\_t](#) [BoardGetL](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets a list of present boards in the device and their board type.*
- [BoardInfo\\_List\\_V2\\_t](#) [BoardGetL\\_V2](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets a list of present boards in the device and their board type.*
- [BoardCfg\\_List\\_t](#) [BoardCfgGetL](#) (in unsigned short BoardNumber, in [PortList\\_t](#) PortList) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*(Deprecated) Gets the configuration of a number of ports.*
- void [BoardCfgSet](#) (in [BoardCfg\\_t](#) BoardCfg) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*(Deprecated) Configure one port.*
- [BoardCfg\\_V2\\_List\\_t](#) [BoardCfg\\_V2\\_GetL](#) (in unsigned short BoardNumber, in [PortList\\_t](#) PortList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the configuration of a number of ports - version 2.*
- void [BoardCfg\\_V2\\_Set](#) (in [BoardCfg\\_V2\\_t](#) BoardCfg) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange, LicenseError)  
*Configure one port - version 2.*
- void [PortDisableModeSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ePortDisableMode](#) PortDisableMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Configure the port disable mode for a GbE portset.*
- void [PortDisableModeGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [ePortDisableMode](#) PortDisableMode) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Request the port disable mode for a GbE portset.*
- void [BoardsConnected](#) (in unsigned short BoardNr, out [BoardList\\_t](#) BoardList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets a list of all boards (hw) connected to a specified BoardNr.*

- void [BoardGetTemperatures](#) (in unsigned short BoardNr, out [BoardTemperature\\_List\\_t](#) BoardTemperature\_List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets a list of all temperatures which can be measured.*

- void [IPS\\_IP\\_ParamsMbGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out string IPAddress, out string SubNetMask, out string DefaultGw, out string MacAddress) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the IP address, network mask, default gateway and MAC address for a mainboard interface.*

- void [IPS\\_IP\\_ParamsMbSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in string IPAddress, in string SubNetMask, in string DefaultGw, in boolean Apply) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the IP address, network mask and default gateway for a mainboard interface.*

- void [IPS\\_IPv6\\_ParamsMbGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out string IPAddress, out string SubNetMask, out string DefaultGw, out string MacAddress) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the IP address, network mask, default gateway and MAC address for a mainboard interface.*

- void [IPS\\_IPv6\\_ParamsMbSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in string IPAddress, in string SubNetMask, in string DefaultGw) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the IP address, network mask, default gateway and MAC address for a mainboard interface.*

- void [IPS\\_IP\\_ParamsMbGet\\_V2](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [IP\\_SubnetList\\_t](#) IPConfig, out string MacAddress) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets all the IP addresses, prefix lengths, default gateways, aliases and MAC address for a mainboard interface.*

- void [IPS\\_IP\\_ParamsMbSet\\_V2](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IP\\_SubnetList\\_t](#) IPConfig, in boolean Apply) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets all the IP addresses, prefix lengths, default gateways and aliases for a mainboard interface.*

- void [SetGbePortMode](#) (in unsigned short BoardNr, in [eGbePortMode\\_t](#) Mode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the given board in either individual port mode (2I2O) or port pairs mode.*

- [eGbePortMode\\_t](#) [GetGbePortMode](#) (in unsigned short BoardNr) raises (TimeOut, OpNotAllowed, OpNotSupported)

*Returns the Gbe port mode of the given board.*

- void [GetNicTeamStatus](#) (out [NicTeamStatus](#) status) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the NIC team status.*

- void [GetNicTeamSettings](#) (out [NicTeam\\_Settings](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the NIC team configuration.*

- void [SetNicTeamSettings](#) (in [NicTeam\\_Settings](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set the NIC team configuration.*

- [IPS\\_ReferenceTS\\_List\\_t](#) [IPS\\_Lookup\\_TSs](#) (in unsigned short BoardNumber, in [IPS\\_LookupTS\\_List\\_t](#) LookUpTS\_List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed, OutOfRange)

*Gets the TS indexes for a number of transport streams.*

- [IPS\\_ReferenceTS\\_List\\_t](#) [IPS\\_FindTSs](#) (in unsigned short BoardNumber, in [IPS\\_LookupTS\\_List\\_t](#) LookUpTS\_List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the TS indexes for a number of transport streams.*

- void [ReserveInputTS](#) (in [IPS\\_RefTS\\_t](#) TS, in unsigned long Reserve) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)
 

*Reserves input TS If a TS is created and not used (no services or PIDs passed from that TS or TS has no input settings) and the TS is not present at the input, it will be deleted after two minutes.*

- [IPS\\_Out\\_ServiceComponents\\_List\\_V2\\_t](#) [IPS\\_OutSvcGetPIDsL\\_V2](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceIdList\\_t](#) OutputSidList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get a list of service components for services on given port and TS.*

- [IPS\\_In\\_ServiceComponents\\_List\\_t](#) [IPS\\_InSvcGetPIDsL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceIdList\\_t](#) InputSidList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get a list of service components for services on given port and TS.*

- void [IPS\\_PassBlockPids](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServicePIDStatus\\_List\\_t](#) ServicePIDStatusList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Block or unblock pids in a list of services on an output TS.*

- void [SetSI\\_Generation](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, in [TableGenerationDataList\\_t](#) TableSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError)

*Change the automatic regeneration of a certain SI table so that it can be passed transparently or "alternatively" regenerated from a non-default input or from local disk (table imported over ethernet).*

- void [GetSI\\_Generation](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, out [TableGenerationDataList\\_t](#) TableSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*(Deprecated) Returns a list of all output table settings.*

- void [GetSI\\_Generation\\_V2](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, out [TableGenerationDataList\\_V2\\_t](#) TableSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Returns a list of all output table settings.*

- void [GetDefaultCompTrackRuleL](#) (in unsigned short BoardNr, in [LongStream](#) RuleIds, out [DefaultTrackRuleList\\_t](#) theList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get a (filtered) set of default component tracking rules for given TS.*

- void [SetDefaultCompTrackRuleL](#) (in unsigned short BoardNr, in [DefaultTrackRuleList\\_t](#) theList, in [LongStream](#) IDsofRulesToDelete) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Update set of default component tracking rules for given board.*

- void [IPS\\_OutGetComponentTrackRuleL](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, out [ComponentTrackRuleList\\_t](#) theList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the current set of component tracking rules for given TS.*

- void [IPS\\_OutGetComponentTrackRuleL\\_Filt](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, in [LongStream](#) RuleIds, out [ComponentTrackRuleList\\_t](#) theList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get a filtered set of component tracking rules for given TS.*

- void [IPS\\_OutSetComponentTrackRuleL](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, in [ComponentTrackRuleList\\_t](#) theList, in [LongStream](#) IDsofRulesToDelete) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Update set of component tracking rules for given TS.*

- void [IPS\\_OutGetComponentTrackRuleL\\_V2](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, out [ComponentTrackRuleList\\_V2\\_t](#) theList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the current set of component tracking rules for given TS.*

- void [IPS\\_OutGetCompTrackRuleL\\_Filt\\_V2](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, in [LongStream](#) RuleIds, out [ComponentTrackRuleList\\_V2\\_t](#) theList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get a filtered set of component tracking rules for given TS.*

- void [IPS\\_OutSetComponentTrackRuleL\\_V2](#) (in [IPS\\_RefTS\\_t](#) OutRefTS, in [ComponentTrackRuleList\\_V2\\_t](#) theList, in [LongStream](#) IDsofRulesToDelete) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Update set of component tracking rules for given TS.*
- void [IPS\\_ServiceCompSettingsGetL](#) (in [IPS\\_RefTS\\_t](#) RefTS, out [ServiceCompSettingsList\\_t](#) ServiceCompSettingsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the list of service component settings for given TS.*
- void [IPS\\_OutSvcGetComponentTagL](#) (in [IPS\\_RefTS\\_t](#) RefTS, out [ComponentTagList\\_t](#) ComponentTagList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the list of components (pids) and their tag.*
- void [OutService\\_AddESFromPidL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [CompPidESList\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Add a list of pid components to output service(s).*
- void [OutService\\_DeleteESFromPidL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [CompPidESList\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Delete a list of pid components from output service(s).*
- void [OutService\\_GetESFromPidL](#) (in [IPS\\_RefTS\\_t](#) RefTS, out [CompPidESList\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get a list of pid components from output service(s).*
- void [OutService\\_AddESFromPidL\\_V2](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [CompPidESList\\_V2\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Add a list of pid components to output service(s) V2.*
- void [OutService\\_DeleteESFromPidL\\_V2](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [CompPidESList\\_V2\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Delete a list of pid components from output service(s) V2.*
- void [OutService\\_GetESFromPidL\\_V2](#) (in [IPS\\_RefTS\\_t](#) RefTS, out [CompPidESList\\_V2\\_t](#) CompPidESList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get a list of pid components from output service(s) V2.*
- void [SetES\\_TypeRules](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [SvcOutES\\_TypeSettingList\\_t](#) SvcOutES\_TypeSettingList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the ES type for a number of output PIDs for a number of services.*
- [SvcOutES\\_TypeSettingList\\_t](#) [GetES\\_TypeRules](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceIdList\\_t](#) OutputSidList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the ES type settings for a list of services.*
- void [SetPcrPids](#) (in [IPS\\_RefSvc\\_t](#) ServiceOut, in [PcrSettingList\\_t](#) PcrSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the PCR PID for a (virtual) output service.*
- [PcrSettingList\\_t](#) [GetPcrPids](#) (in [IPS\\_RefSvc\\_t](#) ServiceOut, in [AlternateSrcIdList\\_t](#) AlternateSrcIdList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the PCR PID settings from a (virtual) output service.*
- void [CreateVlanPortSet](#) (in [VlanPortSet\\_t](#) Settings, out [IPS\\_Ref\\_t](#) RefVlanPortSet) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Creates a Vlan Port Set on a GbE board.*
- void [DeleteVlanPortSet](#) (in [IPS\\_Ref\\_t](#) RefVlanPortSet) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Delete a Vlan PortSet.*
- void [GetVlanPortSets](#) (in [IPS\\_Ref\\_t](#) RefPhysPortSet, out [VlanPortSetList\\_t](#) VlanPortSetList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*get all vlan portsets connect to a physical portset.*

- void [IPS\\_IP\\_ParamsSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in string IPAddress, in string SubNetMask, in [eIPS\\_AutoNegociation](#) AutoNeg) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the IP addresses, network mask and default gateway for a GbE port.*

- void [IPS\\_IP\\_ParamsGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out string IPAddress, out string SubNetMask, out [eIPS\\_AutoNegociation](#) AutoNeg, out string MacAddress) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the IP address, network mask and default gateway for a Gigabit ethernet output.*

- void [IPS\\_SelectModeSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [eIPS\\_PortSelectMode](#) Mode, in [eIPS\\_PortSelectRevert](#) Revert, in unsigned long RevertDelay) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Activates a certain Gige output port.*

- void [IPS\\_SelectModeGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [eIPS\\_PortSelectMode](#) Mode, out [eIPS\\_PortSelectRevert](#) Revert, out unsigned long RevertDelay) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the active output mode status.*

- unsigned long [IPS\\_SelectedPortGet](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the selected port based on the SelectMode and the linkstatuses.*

- void [IPS\\_SetPortBackupTrigger](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ePortBackupTrigger](#) eTrigger) raises (-Timeout, OpNotSucceeded, OpNotSupported)

*Set the port backup trigger mode (trigger on link loss only or on link or udp loss)*

- void [IPS\\_GetPortBackupTrigger](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [ePortBackupTrigger](#) eTrigger) raises (Timeout, OpNotSucceeded, OpNotSupported)

*Gets the port backup trigger mode (trigger on link loss only or on link or udp loss)*

- void [IPS\\_SetPortMirrorMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in boolean EnablePortMirroring) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set port mirroring on GbE ports A GbE portpair can be used in Port Mirroring mode: both main and backup ports are actively streaming and the backup port streams out an exact copy of the active port.*

- void [IPS\\_GetPortMirrorMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, out boolean EnablePortMirroring) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get port mirroring status of GbE ports A GbE portpair can be used in Port Mirroring mode: both main and backup ports are actively streaming and the backup port streams out an exact copy of the active port.*

- void [SetAsiFormat](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [AsiFormatDataList\\_t](#) AsiFormatList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the ASI format and output mode of ASI output ports.*

- [AsiFormatDataList\\_t](#) [GetAsiFormat](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the ASI format (input & output ports) and output mode of ASI output ports.*

- void [ASI\\_MirrorCfgGetL](#) (in unsigned short BoardNr, out [ASI\\_MirrorCfgList\\_t](#) MirrorCfgList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the port mirror configuration of the ASI ports.*

- void [ASI\\_MirrorCfgSetL](#) (in unsigned short BoardNr, in [ASI\\_MirrorCfgList\\_t](#) MirrorCfgList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the port mirror configuration of the ASI ports.*

- void [InPort\\_ASI\\_BW\\_Limit\\_SetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ASI\\_BW\\_LimitDataList\\_t](#) Settings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Enable/disable the ASI bandwidth limiting feature and set its bitrate.*

- [ASI\\_BW\\_LimitDataList\\_t](#) [InPort\\_ASI\\_BW\\_Limit\\_GetL](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the ASI bandwidth limiting data.*

- void [PortOutputStreamingSet](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ePortStreamingType](#) PortOutputStreaming) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the port output streaming setting.*

- void [PortOutputStreamingGet](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [ePortStreamingType](#) PortOutputStreaming, out boolean bStreaming) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the port output streaming setting.*

- void [SetPortPairMirror](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IPS\\_Ref\\_t](#) MirroredPort) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the given port pair in mirror mode.*

- void [GetPortPairMirror](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [IPS\\_Ref\\_t](#) MirroredPort) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Returns the port pair mirror for the supplied port.*

- void [InPort\\_8VSB\\_TuningParams\\_SetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [InPort\\_8VSB\\_TuningParams\\_List\\_t](#) Settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the tuning parameters for the input ports of a board.*

- void [InPort\\_8VSB\\_TuningParams\\_GetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_8VSB\\_TuningParams\\_List\\_t](#) Settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the tuning parameters of the given input port(s).*

- void [InPort\\_8VSB\\_Config\\_SetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [InPort\\_8VSB\\_Config\\_List\\_t](#) Settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets 8VSB specific configuration of one or more 8VSB input ports.*

- void [InPort\\_8VSB\\_Config\\_GetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_8VSB\\_Config\\_List\\_t](#) Settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the 8VSB specific configuration of one or more 8VSB input ports.*

- void [InPort\\_8VSB\\_Statistics\\_GetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_8VSB\\_Statistics\\_List\\_t](#) Statistics) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Retrieves the statistics for one or more 8VSB input ports.*

- void [InPort\\_8VSB\\_Statistics\\_ResetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [PortList\\_t](#) Ports) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Resets the 8VSB statistics for the given 8VSB input port.*

- void [InPort\\_DvbS2\\_RxModeSetL](#) (in unsigned short BoardNr, in [InPort\\_DvbS2\\_PortConfig\\_List\\_t](#) ConfigList) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded, LicenseError)

*Configures the reception mode on one or more DVB S2 ports.*

- void [InPort\\_DvbS2\\_RxModeGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_DvbS2\\_PortConfig\\_List\\_t](#) ConfigList) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Retrieves the reception mode of one or all DVB S2 ports.*

- void [InPort\\_DvbS2\\_TunerCfgSetL](#) (in unsigned short BoardNr, in [InPort\\_DvbS2\\_TunerCfg\\_List\\_t](#) Settings) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Configure tuner parameters for one or more DVB S2 ports.*

- void [InPort\\_DvbS2\\_TunerCfgGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_DvbS2\\_TunerCfg\\_List\\_t](#) Settings) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Retrieve the tuner parameters for one or all DVB S2 ports.*

- void [InPort\\_DvbS2\\_LncCfgSetL](#) (in unsigned short BoardNr, in [InPort\\_DvbS2\\_LncCfg\\_List\\_t](#) Settings) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Configure LNC parameters for one or more DVB S2 ports.*

- void [InPort\\_DvbS2\\_LncCfgGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_DvbS2\\_LncCfg\\_List\\_t](#) Settings) raises (TimeOut, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Retrieve the LNC parameters for one or all DVB S2 ports.*

- void [InPort\\_DvbS2\\_StatusGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_DvbS2\\_Status\\_List\\_t](#) StatusList) raises (Timeout, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Retrieve the status of one or all DVB S2 ports.*
- void [InPort\\_DvbS2\\_CountersGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [InPort\\_DvbS2\\_Counters\\_List\\_t](#) - CounterList) raises (Timeout, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Retrieve the counters of one or all DVB S2 ports.*
- void [InPort\\_DvbS2\\_CountersResetL](#) (in unsigned short BoardNr, in [PortList\\_t](#) Ports) raises (Timeout, OpNotAllowed, OpNotSupported, OpNotSucceeded)  
*Reset the counters of one or more DVB S2 ports.*
- [DvbS2\\_RefTS\\_List\\_t](#) [DvbS2\\_LookupTSs](#) (in unsigned short BoardNumber, in [DvbS2\\_LookupTS\\_List\\_t](#) LookupList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the transport stream references for a number of transport streams with given input stream identifier.*
- [DvbS2\\_RefTS\\_List\\_t](#) [DvbS2\\_FindTSs](#) (in unsigned short BoardNumber, in [DvbS2\\_LookupTS\\_List\\_t](#) LookupList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the TS reference for a number of transport streams with given input stream identifier.*
- void [DvbS2\\_IsiGetL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out boolean bIsMultiStream, out [DvbS2\\_Isi\\_list\\_t](#) IsiList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the list of all detected input stream identifiers on the given DVB-S2 port.*
- [DvbS2\\_InputTS\\_list\\_t](#) [DvbS2\\_InTS\\_GetL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [Ref\\_List\\_t](#) RefList) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the list of DVB-S2 input streams.*
- [Debug\\_DvbS2\\_InputTS\\_List\\_t](#) [DebugDvbS2StreamInGetL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [Ref\\_List\\_t](#) RefList) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Get a list of DVBS2 information of incoming transport streams, including the hardware index.*
- void [InsertDescriptorL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [DescriptorDataList\\_t](#) DescriptorDataList, in boolean Volatile) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Insert descriptors to parts of a table Imported descriptors can be uniquely identified in two ways: either by the tag and the complete descriptor bytestream stream or either by their ID.*
- void [DeleteDescriptorL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [DescriptorDataList\\_t](#) DescriptorDataList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Delete Inserted descriptors This function allows deleting descriptors using a ID or using the [TableKeysExt\\_t](#) with masking for location.*
- void [OutTS\\_GetDescriptorL](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [TableKeysExt\\_t](#) TableKey, out [DescriptorDataList\\_t](#) DescriptorDataList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get ALL descriptors of a table This function can be used to see all descriptors that are available for the specified table at a certain TS.*
- void [OutTS\\_SetSpecDescrOrderRules](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [DescriptorRuleSetList\\_t](#) OrderRulesList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set descriptor order rules to parts of a table Full list set and no add or remove, to allow ordering on the GUI.*

- void [IGMPv2SetMulticastGroupL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IGMPv2MulticastGroupList\\_t](#) Groups) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Specify the multicast groups to be joined.*

- [enumIGMP\\_Version](#) [GetIGMP\\_Version](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the highest supported IGMP version.*

- void [SetIGMP\\_Version](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [enumIGMP\\_Version](#) enVersion) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the highest IGMP version to be supported.*

- [IGMPv3GroupList\\_t](#) [IGMPv3GetMulticastGroupL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IGMPv3GroupList\\_t](#) Groups) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the list of multicast groups and filter specifications.*

- void [IGMPv3JoinLeaveL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IGMPv3GroupList\\_t](#) Groups) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Join and/or leave multiple multicast groups.*

- void [SetIGMP\\_IndividualMode](#) (in unsigned short BoardNumber, in boolean bModeOn) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*(Un)set individual join mode for this board.*

- void [GetIGMP\\_IndividualMode](#) (in unsigned short BoardNumber, out boolean bModeOn) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the individual join mode for this board.*

- void [PCTM\\_SetBoardDefThresholds](#) (in unsigned short BoardNr, in [PCTM\\_ThresholdValues\\_t](#) - BoardDefaultSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set board default threshold settings for each packet type.*

- void [PCTM\\_GetBoardDefThresholds](#) (in unsigned short BoardNr, out [PCTM\\_ThresholdValues\\_t](#) - BoardDefaultSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get board default threshold settings for each packet type.*

- void [PCTM\\_SetStreamThresholds](#) (in unsigned short BoardNr, in [PCTM\\_StreamThresholdSettings\\_List\\_t](#) StreamSpecificSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set or unset stream specific packet type thresholds settings that overwrite the board default settings.*

- void [PCTM\\_GetStreamThresholds](#) (in [IPS\\_Ref\\_t](#) Location, in [IPS\\_RefTS\\_List\\_t](#) Streams, out [PCTM\\_StreamThresholdSettings\\_List\\_t](#) StreamSpecificSettings) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get stream specific packet type thresholds settings.*

- void [PCTM\\_GetPacketCounters](#) (in [IPS\\_Ref\\_t](#) Location, in [IPS\\_RefTS\\_List\\_t](#) Streams, out [PCTM\\_StreamPacketCounters\\_List\\_t](#) PacketCounters) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get packet counters of one, multiple or all streams.*

- void [PCTM\\_Reset](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Reset all packet counters, clear all threshold alarms and restart all threshold measurement windows.*

- void [UninstallFeature](#) (in unsigned short BoardNr, in string Name) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*UnInstalls the license of a feature.*

- void [SetFeatureState](#) (in unsigned short BoardNr, in string Name, in [eFeatureState](#) State) raises (-Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the state of a feature.*

- void [GetHostId](#) (in unsigned short BoardNr, out string HostId) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*GetHostId.*

- void [GetFamilyName](#) (in unsigned short BoardNr, out string FamilyName) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*GetFamilyName.*

- [FeatureList\\_t](#) [GetFeatureSettings](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the settings of all the registered features.*

- [LicenseValidation\\_t](#) [GetLicenseValidation](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*GetVersionAndValidationKey.*

- [eDeviceState](#) [GetDeviceState](#) (in unsigned short BoardNr) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*GetDeviceState.*

- [TempLicenseData GetTempLicenseData](#) (in unsigned short BoardNr) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the data of the Temporary Licenses.*

- void [ExpireTempLicenses](#) (in unsigned short BoardNr) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Makes sure the temporary licenses are expired at the time the users wants it.*

- [BoardFeatureUsageList\\_t GetBoardFeatureUsageL](#) (in unsigned short BoardNr) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Returns the licenses in use per feature and per board.*

- void [SetDefaultServiceLossTriggers](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [TriggerBitmap\\_t](#) TriggerBitmap) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the default Service Loss Alarm triggers.*

- void [GetDefaultServiceLossTriggers](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [TriggerBitmap\\_t](#) TriggerBitmap) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the default Service Loss Alarm triggers.*

- void [SetDefaultTS\\_LossTriggers](#) (in unsigned short Board, in [TriggerBitmap\\_t](#) TriggerBitmap) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the default TS Loss Alarm triggers.*

- void [GetDefaultTS\\_LossTriggers](#) (in unsigned short Board, out [TriggerBitmap\\_t](#) TriggerBitmap) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the default TS Loss Alarm triggers.*

- void [SetServiceLossTriggers](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceLossTriggerList\\_t](#) TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the service loss triggers for specified services on given TS.*

- void [ResetServiceLossTriggers](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceIdList\\_t](#) InputSidList) raises (-TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Reset the service loss triggers for specified services on given TS.*

- void [GetServiceLossTriggers](#) (in [IPS\\_RefTS\\_t](#) RefTS, in [ServiceIdList\\_t](#) InputSidList, out [ServiceLossTriggerList\\_t](#) TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the service loss triggers for all or specified input services on given Port and TS.*

- void [SetTS\\_LossTriggers](#) (in [IPS\\_Ref\\_t](#) Ref, in [TS\\_LossTriggerList\\_t](#) TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the TS loss triggers for specified TS's on given port.*

- void [ResetTS\\_LossTriggers](#) (in [IPS\\_Ref\\_t](#) Ref, in [Ref\\_List\\_t](#) RefList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Reset the TS loss triggers for specified TS's on given port.*

- void [GetTS\\_LossTriggers](#) (in [IPS\\_Ref\\_t](#) Ref, in [Ref\\_List\\_t](#) RefList, out [TS\\_LossTriggerList\\_t](#) -TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Get the TS loss triggers for all or specified input TS's on given Port.*

- void [SetDeviceActiveMode](#) (in [eDeviceActiveMode](#) DeviceActiveMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the device mode.*

- void [GetDeviceActiveMode](#) (out [eDeviceActiveMode](#) DeviceActiveMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Query the device mode.*

- void [SetPowerupDeviceActiveMode](#) (in [eDeviceActiveMode](#) DeviceActiveMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Set the power-up device mode.*

- void [GetPowerupDeviceActiveMode](#) (out [eDeviceActiveMode](#) DeviceActiveMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the power-up device mode.*
- void [GetPeerDeviceActiveMode](#) (out [eDeviceActiveMode](#) DeviceActiveMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the peer device mode.*
- void [SetDeviceBU\\_Params](#) (in [DeviceBackupParams\\_t](#) DeviceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the parameters to be used by Device Backup.*
- void [GetDeviceBU\\_Params](#) (out [DeviceBackupParams\\_t](#) DeviceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the parameters used by Device Backup.*
- void [SetDeviceBU\\_ParamsV2](#) (in [DeviceBackupParamsV2\\_t](#) DeviceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the parameters to be used by Device Backup.*
- void [GetDeviceBU\\_ParamsV2](#) (out [DeviceBackupParamsV2\\_t](#) DeviceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the parameters used by Device Backup.*
- void [DeviceBU\\_ActivateDevice](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Instructs this device to gracefully become the active device.*
- void [SetIP\\_AliasMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [eActivationMode](#) ActivationMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set activation mode for the list of IP aliases associated with a specific network interface.*
- void [GetIP\\_AliasMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [eActivationMode](#) ActivationMode) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get activation mode for the list of IP aliases associated with a specific network interface.*
- void [SetIP\\_AliasList](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [IP\\_List\\_t](#) IP\_Addresses) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the list of IP aliases associated with a specific network interface.*
- void [GetIP\\_AliasList](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [IP\\_List\\_t](#) IP\_Addresses) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the list of IP aliases associated with a specific network interface.*
- void [SetDeviceBackupTriggers](#) (in [MM\\_IDList](#) Triggers) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the list of triggers that define when a backup is needed.*
- void [GetDeviceBackupTriggers](#) (out [MM\\_IDList](#) Triggers) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the list of triggers that define when a backup is needed.*
- void [SetCardNotOperationalTriggers](#) (in unsigned short Board, in [AlarmTriggerRuleList](#) Rules) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set list alarm trigger rules for CardNotOperational.*
- void [GetCardNotOperationalTriggers](#) (in unsigned short Board, out [AlarmTriggerRuleList](#) Rules) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get list alarm trigger rules for CardNotOperational.*
- void [GetActiveCardNotOperTriggers](#) (in unsigned short Board, out [MM\\_IDList](#) ActiveAlarms) raises (TimeOut, OpNotAllowed, OpNotSupported)  
*Get list measurement references of all active alarms configured as trigger for backup.*

- void [GetSettingsRestoreOptions](#) (out [RestoreOptions](#) options) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the restore options.*
- void [SetSettingsRestoreOptions](#) (in [RestoreOptions](#) options) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set restore options.*
- void [BackupSettings](#) (out [ByteStream](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieve settings from the device.*
- void [RestoreSettings](#) (in [ByteStream](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Restore settings onto the device.*
- void [BackupSettings2](#) (in unsigned short scope, out [ByteStream](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieve settings from the device.*
- void [RestoreSettings2](#) (in unsigned short scope, in [ByteStream](#) settings) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Restore settings onto the device.*
- void [RestoreSettings3](#) (in unsigned short scope, in [ByteStream](#) settings, in boolean bReturnEarly, out [eRestoreSettingsResult](#) Result) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Restore settings onto the device and try to do this seamless.*
- void [PollRestoreSettingsResult](#) (out [eRestoreSettingsResult](#) Result) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Check if the asynchronously launched RestoreSettingsAsync call has finished its job (poll for its status).*
- void [GetSettingsRestoreOptions\\_V2](#) (out [RestoreOptions\\_V2](#) options) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the restore options.*
- void [SetSettingsRestoreOptions\\_V2](#) (in [RestoreOptions\\_V2](#) options) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set restore options.*
- void [SetTS\\_BU\\_Params](#) (in [IPS\\_RefTS\\_t](#) InTS, in [TS\\_BackupParams\\_t](#) TS\_BackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the Backup parameters for an Input TS.*
- void [GetTS\\_BU\\_Params](#) (in [IPS\\_RefTS\\_t](#) InTS, out [TS\\_BackupParams\\_t](#) TS\_BackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the Backup parameters for an Input TS.*
- void [SetActiveInputTS](#) (in [IPS\\_RefTS\\_t](#) InTS, in [IPS\\_RefTS\\_t](#) ActiveInTS) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Let the user manually set the active InputTS.*
- void [GetActiveInputTS](#) (in [IPS\\_RefTS\\_t](#) InTS, out [IPS\\_RefTS\\_t](#) ActiveInTS) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the active InputTS.*
- void [SetTS\\_BU\\_SwitchToGoodSrcOnly](#) (in unsigned short Board, in boolean Enabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets for TS backup that the switch to the backup TS will only happen if this TS is not in alarm.*
- void [GetTS\\_BU\\_SwitchToGoodSrcOnly](#) (in unsigned short Board, out boolean Enabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets for TS backup if the switch to the backup TS will only happen if this TS is not in alarm.*

- void [GetMIP\\_SyncDeviceRole](#) (out [enMIP\\_Sync\\_DeviceRole](#) MIP\_Sync\_DeviceRole) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the MIP Synchronization role of a device.*
- void [SetMIP\\_SyncDeviceRole](#) (in [enMIP\\_Sync\\_DeviceRole](#) MIP\_Sync\_DeviceRole) raises (TimeOut, OperationFailed, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the MIP Synchronization role of a device.*
- void [GetMIP\\_SyncTargetSettings](#) (out [MIP\\_SyncTargetSettings\\_t](#) TargetSettings) raises (TimeOut, OperationFailed, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the settings of the MIP Synchronization Target.*
- void [SetMIP\\_SyncTargetSettings](#) (in [MIP\\_SyncTargetSettings\\_t](#) TargetSettings) raises (TimeOut, OperationFailed, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the settings of the MIP Synchronization Target.*
- void [ASI\\_SFN\\_MKII\\_GetMIP\\_SyncEnable](#) (in unsigned short BoardNr, out boolean MIP\_Sync-Enabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the MIP Synchronization Enabled setting of an ASI SFN MKII Board.*
- void [ASI\\_SFN\\_MKII\\_SetMIP\\_SyncEnable](#) (in unsigned short BoardNr, in boolean MIP\_SyncEnable) raises (TimeOut, OperationFailed, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the MIP Synchronization Enabled setting of an ASI SFN MKII Board.*
- void [SetASIBoardType](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [eASI\\_BoardType](#) ASIBoardType) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Configures the ASI board in either regular or DTF mode.*
- void [GetASIBoardType](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [eASI\\_BoardType](#) ASIBoardType) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Reads the current ASI board sub-type.*
- [ASI\\_DTF\\_OutputTS\\_t ASI\\_DTF\\_OutTS\\_Get](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the current DTF settings.*
- [ASI\\_DTF\\_OutputTS\\_Ex\\_t ASI\\_DTF\\_OutTS\\_GetEx](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the current DTF settings.*
- [ASI\\_DTF\\_OutputTS\\_RDSCS\\_t ASI\\_DTF\\_OutTS\\_RDSCS\\_Get](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the DTF RDSCS settings.*
- void [ASI\\_DTF\\_Change](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ASI\\_DTF\\_OutputTS\\_t](#) OutputTS) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the DTF settings.*
- void [ASI\\_DTF\\_ChangeEx](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ASI\\_DTF\\_OutputTS\\_Ex\\_t](#) OutputTS) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the DTF settings.*
- void [ASI\\_DTF\\_RDSCS\\_Change](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ASI\\_DTF\\_OutputTS\\_RDSCS\\_t](#) OutputTS) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)  
*Sets DTF RDSCS settings.*
- unsigned long [ASI\\_DTF\\_OutTS\\_GetStuffingBitRate](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the bit rate of the stuffing packets in the DTF output stream.*
- [ASI\\_DTF\\_ScramblingKeyList ASI\\_DTF\\_GetKeyList](#) (in [IPS\\_Ref\\_t](#) RefPhys) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the list of 64 scrambling key pairs.*

- void [ASI\\_DTF\\_SetKeyList](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [ASI\\_DTF\\_ScramblingKeyList](#) KeyList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets up the list with 64 scrambling key pairs.*
- void [ASI\\_DTF\\_SetKeyList\\_V2](#) (in unsigned short BoardNumber, in [ASI\\_DTF\\_KeyList\\_t](#) KeyList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Replace DTF BISS scrambling keys.*
- void [ASI\\_DTF\\_ClearCredentials](#) (in unsigned short BoardNumber) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Clear all DTF related credentials.*
- void [ASI\\_DTF\\_SetSWDK](#) (in unsigned short BoardNumber, in string SWDK) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Enter a SWDF decryption key.*
- [MM\\_MessageList](#) [MM\\_GetMessageList](#) (in unsigned long StartMsgNbr, in unsigned long EndMsgNbr) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Used to get the a sequence of messages from the device.*
- [MessageBufferInfo](#) [GetMessageBufferInfo](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the current status of the MsgBuffer.*
- void [GenerateTestMsg](#) () raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*causes a test message to be sent.*
- void [UpdatePendingTestAlarm](#) (in unsigned short Board, in octet Action, in string Detail) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*update a test alarm via user input.*
- void [MM\\_GetAllOpenMsgStatus](#) (out unsigned short OldestSeqNumber, out unsigned short LatestSeqNumber, out [MM\\_Message](#) OldestMessage, out [MM\\_Message](#) LatestMessage, out [MM\\_MessageList](#) OpenMessageList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets all messages with open status plus current message buffer info.*
- void [MM\\_SetMsgTypeSettingL](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [MM\\_MessageTypeSettingList](#) List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set settings per message-type.*
- void [MM\\_GetMsgTypeSettingL](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [MM\\_MessageTypeSettingList](#) List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get settings per message-type.*
- void [MM\\_SetMsgSettingL](#) (in [MM\\_MessageSettingList](#) List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set settings per message.*
- void [MM\\_GetMsgSettingL](#) (out [MM\\_MessageSettingList](#) List) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get settings per message.*
- void [SetAllMsgEnabled](#) (in octet AllMsgEnabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Specify whether all messages are enabled.*
- void [GetAllMsgEnabled](#) (out octet AllMsgEnabled) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get Specification whether all messages are enabled.*
- [MM\\_TypeInfoList](#) [MM\\_GetTypeInfo](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get static info of measurements according to category and level.*

- [MM\\_TypeInfoList\\_V2 MM\\_GetTypeInfo\\_V2](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get static info of measurements according to category and level (V2: field added).*
- [MM\\_TypeInfoList MM\\_GetTypeInfoForTypeIDs](#) (in unsigned short Board, in [MM\\_TypeIDList](#) M-MM\_TypeIDs) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get static info of measurements according MM\_TypeID.*
- [MM\\_MeasurementStatList MM\\_GetNbrOpenMeasurements](#) (in [IPS\\_RefTS\\_t](#) TSref, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get number of open measurements according to category and level.*
- [MM\\_MeasurementStatList MM\\_GetNbrOpenMeasurementsOnLevel](#) (in [IPS\\_RefTS\\_t](#) TSref, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get number of open measurements according to category and level.*
- [MM\\_MeasurementList MM\\_GetAllMeasurements](#) (in [IPS\\_RefTS\\_t](#) TSref, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get all measurements according to category and level.*
- [MM\\_MeasurementList MM\\_GetOpenMeasurements](#) (in [IPS\\_RefTS\\_t](#) TSref, in [MM\\_ID\\_Category](#) ID\_Cat, in [DeviceLevel](#) Level) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get all open measurements according to category and level.*
- [MM\\_MeasurementList MM\\_GetMeasurements](#) (in [IPS\\_RefTS\\_t](#) TSref, in [MM\\_IDList](#) List) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get measurements according to a list of references.*
- void [SetBitrateErrorThreshold](#) (in unsigned short BoardNr, in [BoardBitrateThreshold](#) BitrateThreshold) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the service loss bitrate threshold (for video, audio and data) on the given board.*
- void [GetBitrateErrorThreshold](#) (in unsigned short BoardNr, out [BoardBitrateThreshold](#) BitrateThreshold) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the service loss bitrate threshold (for video, audio and data) on the given board.*
- void [MM\\_SetErrorInterval](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [MM\\_MessageTypeErrorIntervalList](#) List) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the intervals for the given messages on the given board.*
- void [MM\\_GetErrorInterval](#) (in [IPS\\_Ref\\_t](#) RefPhys, out [MM\\_MessageTypeErrorIntervalList](#) List) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the error intervals for all error types on the given board.*
- void [SetGenerateAlarmsIfGroomed](#) (in [IPS\\_Ref\\_t](#) RefPhys, in boolean GenerateGroomedOnly) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set whether alarms will only be generated if groomed.*
- void [GetGenerateAlarmsIfGroomed](#) (in [IPS\\_Ref\\_t](#) RefPhys, out boolean GenerateGroomedOnly) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get whether alarms will only be generated for groomed services.*
- void [SetNtpAlarmOffset](#) (in long Offset) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Set the NTP offset alarm threshold value.*
- void [GetNtpAlarmOffset](#) (out long Offset) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Get the NTP offset alarm threshold value.*

- void [SetCardOperFailureTriggers](#) (in [CofTriggerList\\_t](#) TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the trigger for card not operational failure alarms for one or more cards.*
- void [GetCardOperFailureTriggers](#) (out [CofTriggerList\\_t](#) TriggerList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the triggers for card not operational failure alarms for all cards.*
- void [OutTsSetBitrateThresholdL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [OutTS\\_AlarmSettingList\\_t](#) AlarmList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets bitrate threshold alarm parameters for a (number of) TS(s).*
- [OutTS\\_AlarmSettingList\\_t](#) [OutTsGetBitrateThresholdL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [RefList\\_t](#) Ts-Idxs) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves the bitrate threshold alarm parameters for a (number of) TS(s).*
- void [SetBitrateAlarmDefaults](#) (in unsigned short Board, in [BitrateAlarmSetting\\_t](#) BitrateAlarm) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets bitrate threshold alarm default parameters.*
- [BitrateAlarmSetting\\_t](#) [GetBitrateAlarmDefaults](#) (in unsigned short Board) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Retrieves bitrate threshold alarm default parameters.*
- void [SetServiceBU\\_Params](#) (in [IPS\\_Service\\_t](#) OutService, in [ServiceBackupParams\\_t](#) ServiceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the ServiceBackup parameters for an output service.*
- void [GetServiceBU\\_Params](#) (in [IPS\\_Service\\_t](#) OutService, out [ServiceBackupParams\\_t](#) ServiceBackupParams) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the ServiceBackup parameters of an output service.*
- void [SetServiceBU\\_Params2](#) (in [IPS\\_Service\\_t](#) OutService, in [ServiceBackupParams2\\_t](#) ServiceBackupParams2) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Sets the ServiceBackup parameters for an output service.*
- void [GetServiceBU\\_Params2](#) (in [IPS\\_Service\\_t](#) OutService, out [ServiceBackupParams2\\_t](#) ServiceBackupParams2) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported)  
*Gets the ServiceBackup parameters of an output service.*

- void [NegotiatedGbePortSpeed\\_GetL](#) (in unsigned short BoardNumber, out [NegotiatedGbePortSpeed\\_List\\_t](#) NegotiatedGbePortSpeedList) raises (TimeOut, OpNotAllowed, OpNotSupported, OperationFailed)  
*Retrieves the negotiated GbE port speeds for each GbE port.*
- void [InTS\\_Statistic\\_GetL](#) (in unsigned short SlotNumber, in [IPS\\_RefTS\\_List\\_t](#) RefList, out [InTS\\_Statistic\\_List\\_t](#) StatisticList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Applicable for release 7.5.*
- void [InTS\\_Statistic\\_Reset](#) (in unsigned short SlotNumber) raises (TimeOut, OpNotAllowed, OpNotSupported, OperationFailed)  
*Applicable for release 7.5.*
- void [InTS\\_AES\\_Statistic\\_GetL](#) (in unsigned short SlotNumber, in [IPS\\_RefTS\\_List\\_t](#) RefList, out [InTS\\_AES\\_Statistic\\_List\\_t](#) StatisticList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)  
*Applicable for release 11.10.*
- void [InTS\\_AES\\_Statistic\\_Reset](#) (in unsigned short SlotNumber) raises (TimeOut, OpNotAllowed, OpNotSupported, OperationFailed)  
*Applicable for release 11.10.*
- void [DCG\\_SetStreamBU\\_Params](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_StreamBackupParamsList\\_t](#) StreamBackupParamsList) raises (TimeOut, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the StreamBackup parameters for an output service.*

- [DCG\\_StreamBackupParamsList\\_t DCG\\_GetStreamBU\\_Params](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the StreamBackup parameters for an output service.*

- void [DCG\\_SetBU\\_Streams](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_BackupStreamList\\_t](#) BU\_StreamList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the backup streams for each output stream.*

- [DCG\\_BackupStreamList\\_t DCG\\_GetBU\\_Streams](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the configured main/backup pairs for the requested reference.*

- void [DCG\\_SetActiveInputStream](#) (in [IPS\\_RefTS\\_t](#) OutStream, in [IPS\\_RefTS\\_t](#) ActiveInStream) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the active stream for the specified output.*

- void [DCG\\_GetActiveInputStream](#) (in [IPS\\_RefTS\\_t](#) OutStream, out [IPS\\_RefTS\\_t](#) ActiveInStream) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get the active stream for the specified output.*

- void [BoardCfgSet3GTopology](#) (in unsigned short SlotNumber, in [enDCG\\_3G\\_Topology\\_t](#) BoardCfg\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set IPGW board configuration for 3G streams.*

- void [BoardCfgGet3GTopology](#) (in unsigned short SlotNumber, out [enDCG\\_3G\\_Topology\\_t](#) BoardCfg\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get IPGW board configuration for 3G streams.*

- void [GetPossible3GTopology](#) (in unsigned short SlotNumber, out [DCG\\_Possible3GBoardCfgList\\_t](#) BoardCfgList\_3G) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get a list of all board configurations and whether they can be applied or not.*

- void [DCG\\_GetAudioSignalInfo](#) (in unsigned short BoardNr, in [IPS\\_RefTS\\_List\\_t](#) RefList, out [DCG\\_AudioSignalInfoList\\_t](#) SignalInfoList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the (audio) signal information from an input AES signal.*

- void [DCG\\_GetCompressionMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList, out [DCG\\_CompressionEnableList\\_t](#) CompressionEnableList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the Compression setting for RTP streams.*

- void [DCG\\_SetCompressionMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_CompressionEnableList\\_t](#) CompressionEnableList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the compression setting for RTP streams This function can be used for input as well as output streams.*

- void [DCG\\_GetJP2K\\_Params](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList, out [DCG\\_JP2K\\_paramsList\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the JPEG2000 settings from an output JP2K stream.*

- void [DCG\\_GetJP2K\\_Params\\_V2](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList, out [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*This function is similar to [DCG\\_GetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of [DCG\\_JP2K\\_paramsList\\_t](#) but a list of [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) which differs in that the latter have an extra tributary, bEnableVPS.*

- void [DCG\\_GetJP2K\\_Params\\_V3](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList, out [DCG\\_JP2K\\_paramsList\\_V3\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*This function is similar to [DCG\\_GetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements returned is not a list of [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) but a list of [DCG\\_JP2K\\_paramsList\\_V3\\_t](#) which differs in that the latter have an extra element, [bSDI20BitAudio](#).*

- void [DCG\\_SetJP2K\\_Params](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_JP2K\\_paramsList\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Sets the JPEG200 parameters for an output JP2K stream.*

- void [DCG\\_SetJP2K\\_Params\\_V2](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*This function is similar to [DCG\\_SetJP2K\\_Params\(\)](#) above, except for the list of elements returned is not a list of [DCG\\_JP2K\\_paramsList\\_t](#) but a list of [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) which differs in that the latter have an extra tributary, [bEnableVPS](#).*

- void [DCG\\_SetJP2K\\_Params\\_V3](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_JP2K\\_paramsList\\_V3\\_t](#) JP2K\_paramsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*This function is similar to [DCG\\_SetJP2K\\_Params\\_V2\(\)](#) above, except for the list of elements input is not a list of [DCG\\_JP2K\\_paramsList\\_V2\\_t](#) but a list of [DCG\\_JP2K\\_paramsList\\_V3\\_t](#) which differs in that the latter have an extra element, [bSDI20BitAudio](#).*

- void [BoardCfgSetJP2KTopology](#) (in unsigned short SlotNumber, in [enDCG\\_JP2K\\_Topology\\_t](#) J-P2K\_BoardCfg) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Set JPEG 2000 board configuration.*

- void [BoardCfgGetJP2KTopology](#) (in unsigned short SlotNumber, out [enDCG\\_JP2K\\_Topology\\_t](#) J-P2K\_BoardCfg) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Get JPEG 2000 board configuration.*

- void [DCG\\_GetHitlessSwitchOverMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [Ref\\_List\\_t](#) RefList, out [DCG\\_HitlessSwitchOverEnable\\_List\\_t](#) HitlessSwitchOverEnableList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed)

*Gets the HitlessSwitchOver setting for RTP streams.*

- void [DCG\\_SetHitlessSwitchOverMode](#) (in [IPS\\_Ref\\_t](#) RefPhys, in [DCG\\_HitlessSwitchOverEnable\\_List\\_t](#) HitlessSwitchOverEnableList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OperationFailed, LicenseError)

*Sets the HitlessSwitchOver setting for RTP streams.*

- [GPI\\_SettingsList\\_t](#) [GetGpiSettings](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the settings for the 5 contacts.*

- void [SetGpiSettings](#) (in [GPI\\_SettingsList\\_t](#) GpiSettingsList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, LicenseError, OutOfRange)

*Sets the settings for the 5 contacts.*

- unsigned short [GetGpiRebootContact](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the number of the contact used for rebooting the device.*

- void [SetGpiRebootContact](#) (in unsigned short ContactNumber) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported, OutOfRange)

*Sets the number of the contact used for rebooting the device.*

- [GPI\\_StatusControllList\\_t](#) [GetGpi](#) () raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Queries the status of the 5 contacts.*

- void [SetGpi](#) (in [GPI\\_StatusControlList\\_t](#) GPIStatusList) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the status of the 5 contacts Only the Number and Status or Control member of [GPI\\_StatusControl\\_t](#) are taken into account, the other members are ignored in this call.*

- void [FCS\\_SetDeviceIdSelectGpiPin](#) (in unsigned short BoardNumber, in unsigned short GpiPin-Number) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Sets the Gpi Pin that is used to identify the device for customer specific Scte53 commands When the selected pin is asserted, the board will handle customer specific Scte35 commands targeted for the backup/secondary device.*

- void [FCS\\_GetDeviceIdSelectGpiPin](#) (in unsigned short BoardNumber, out unsigned short GpiPin-Number) raises (Timeout, OpNotSucceeded, OpNotAllowed, OpNotSupported)

*Gets the Gpi Pin that is used to identify the device for customer specific Scte53 commands.*

- void [AddNewScript](#) (in [ByteStream](#) ScriptContents) raises (Timeout, OpNotSucceeded, LicenseError)

*Add a new script to the the list of installed scripts.*

- void [DeleteScript](#) (in unsigned long ScriptId) raises (Timeout, OpNotSucceeded, LicenseError)

*Delete an existing script.*

- void [GetScriptsList](#) (out [ScriptEntryList\\_t](#) ScriptList) raises (Timeout, LicenseError)

*Get the list of currently installed scripts.*

- void [RunScript](#) (in unsigned long ScriptId) raises (Timeout, OpNotSucceeded, OpNotAllowed, LicenseError)

*Run an existing script.*

- void [UploadScriptResource](#) (in unsigned long ScriptId, in string FileName, in [ByteStream](#) FileContents) raises (Timeout, OpNotSucceeded, LicenseError)

*Upload a file to be used by the script (resource, config file,...)*

- void [StopScript](#) (in unsigned long ScriptId) raises (Timeout, OpNotSucceeded, LicenseError)

*Stop a running script.*

- void [SetAutorunScript](#) (in unsigned long ScriptId, in boolean AutoRun) raises (Timeout, OpNotSucceeded, LicenseError)

*Change the autorun property of a script, if set to true script will also start.*

- void [StopAllScripts](#) () raises (Timeout, LicenseError)

*Stop all running scripts.*

- void [GetScriptLogfile](#) (in unsigned long ScriptId, out string LogContents) raises (Timeout, OpNotSucceeded, LicenseError)

*Get a logfile of an installed script.*

- void [OutTS\\_SrcAddrScheme\\_SetL](#) (in unsigned short BoardNbr, in boolean UseScheme, in string IP, in string SubNetMask) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set SourceIp Scheme for new TS created with [IPS\\_OutTS\\_AddL\(\)](#).*

- void [OutTS\\_SrcAddrScheme\\_GetL](#) (in unsigned short BoardNbr, out boolean UseScheme, out string IP, out string SubNetMask) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get SourceIp Scheme for a new TS.*

- void [GetRipBoardSettings](#) (in unsigned short BoardNbr, out [RipBoardSettings](#) Settings) raises (-Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the board-wide RIP settings.*

- void [SetRipBoardSettings](#) (in unsigned short BoardNbr, in [RipBoardSettings](#) Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set the board-wide RIP settings.*

- void [GetRipInterfaceSettingsL](#) (in unsigned short BoardNbr, in [PortList\\_t](#) Ports, out [RipInterfaceSettingsList\\_t](#) Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the RIP Interface settings.*

- void [SetRipInterfaceSettingsL](#) (in unsigned short BoardNbr, in [RipInterfaceSettingsList\\_t](#) Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the RIP Interface settings.*

- void [GetRipTsSettingsL](#) (in unsigned short BoardNbr, in [IPS\\_RefTS\\_List\\_t](#) TSRefs, out [RipTsSettingsList\\_t](#) Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get RIP TS-specific Settings.*

- void [SetRipTsSettingsL](#) (in unsigned short BoardNbr, in [RipTsSettingsList\\_t](#) Settings) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get RIP TS-specific Settings.*

- void [GetDefaultOutputTsLossTriggers](#) (in unsigned short BoardNbr, out [OutputTsLossTrigger\\_t](#) - Trigger) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the default Output TS Loss trigger.*

- void [SetDefaultOutputTsLossTriggers](#) (in unsigned short BoardNbr, in [OutputTsLossTrigger\\_t](#) - Trigger) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set the default Output TS Loss trigger.*

- void [GetOutputTsLossTriggerL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [IPS\\_RefTS\\_List\\_t](#) TSRefs, out [OutputTsLossTriggerPerTsList\\_t](#) Triggers) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the Output TS Loss Triggers for the given TSs.*

- void [SetOutputTsLossTriggerL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [OutputTsLossTriggerPerTsList\\_t](#) Triggers) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set the Output TS Loss Triggers for the given TSs.*

- void [GetDefaultOutputTsLossTriggerBmp](#) (in unsigned short BoardNbr, out [OutputTsLossTriggerBitmap\\_t](#) TriggerBitmap) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the default Output TS Loss trigger bitmap.*

- void [SetDefaultOutputTsLossTriggerBmp](#) (in unsigned short BoardNbr, in [OutputTsLossTriggerBitmap\\_t](#) TriggerBitmap) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set the default Output TS Loss trigger bitmap.*

- void [GetOutputTsLossTriggerBitmapL](#) (in [IPS\\_Ref\\_t](#) PhysRef, in [IPS\\_RefTS\\_List\\_t](#) TSRefs, out [OutputTsLossTriggerBitmapPerTsList\\_t](#) TriggerBitmaps) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Get the Output TS Loss Triggers for the given TSs.*

- void [SetOutputTsLossTriggerBitmapL](#) (in unsigned short BoardNr, in [OutputTsLossTriggerBitmapPerTsList\\_t](#) TriggerBitmaps) raises (Timeout, OperationFailed, OpNotAllowed, OpNotSupported, OpNotSucceeded)

*Set the Output TS Loss Triggers for the given TSs.*

- void [ReturnOperationFailedException](#) (in unsigned short Type, in string Explanation) raises (OperationFailed)

*Return an OperationFailed Exception.*

## Public Attributes

- const unsigned short `INVALID_BOARD` = 0xffff  
*Undefined board.*

### 10.98.1 Detailed Description

The only interface of DCM to the outside world.

Definition at line 334 of file DCM.idl.

### 10.98.2 Member Typedef Documentation

#### 10.98.2.1 typedef sequence<octet> DCM::DeviceControl::ByteStream

A sequence of bytes.

Definition at line 340 of file DCM.idl.

#### 10.98.2.2 typedef sequence<long> DCM::DeviceControl::LongStream

A sequence of longs.

Definition at line 343 of file DCM.idl.

#### 10.98.2.3 typedef sequence<MM\_ID\_t> DCM::DeviceControl::MM\_IDList

A sequence of [MM\\_ID\\_t](#).

Definition at line 440 of file DCM.idl.

#### 10.98.2.4 typedef sequence<unsigned short> DCM::DeviceControl::MM\_TypeIDList

A sequence of MM\_TypeID's.

Definition at line 443 of file DCM.idl.

#### 10.98.2.5 typedef sequence<SMX36\_AlgorithmIdentifier\_t> DCM::DeviceControl::SMX36\_AlgorithmIdentifierList\_t

Definition at line 23889 of file DCM.idl.

#### 10.98.2.6 typedef sequence<long> DCM::DeviceControl::SMX36\_EncoderIdList\_t

SMX36\_Encoder\_Delete(in SMX36\_EncoderIdList\_t EncoderIdlist) deletes the encoder.

### Version

release 9.0

### 10.98.3 Member Enumeration Documentation

**10.98.3.1** `enum DCM::DeviceControl::eDeviceType`

The different device types, mechanical chassis types.

#### Enumerator:

*eDeviceType\_D9900* 2RU [DCM](#) MKI  
*eDeviceType\_D9901* 1RU [DCM](#) MKI  
*eDeviceType\_D9902* 2RU [DCM](#) MKII  
*eDeviceType\_D9036* 1RU MVP  
*eDeviceType\_Reserved1*  
*eDeviceType\_Reserved2*  
*eDeviceType\_Reserved3*  
*eDeviceType\_Reserved4*  
*eDeviceType\_Reserved5*

*eDeviceType\_Reserved6*  
*eDeviceType\_Reserved7*  
*eDeviceType\_Reserved8*  
*eDeviceType\_Reserved9*  
*eDeviceType\_Reserved10*

Definition at line 373 of file DCM.idl.

#### 10.98.3.2 enum DCM::DeviceControl::eSystemType

The different system types.

Enumerator:

*eDCM*  
*eDCM\_SuperCrypt*  
*eDCM\_Statmux*

Definition at line 346 of file DCM.idl.

#### 10.98.3.3 enum DCM::DeviceControl::eSystemType\_V2

The different product families.

Enumerator:

*eSystemType\_V2\_DCM*  
*eSystemType\_V2\_SuperCrypt*  
*eSystemType\_V2\_MVP*  
*eSystemType\_V2\_PCAM*  
*eSystemType\_V2\_Reserved1*  
*eSystemType\_V2\_Reserved2*  
*eSystemType\_V2\_Reserved3*  
*eSystemType\_V2\_Reserved4*  
*eSystemType\_V2\_Reserved5*  
*eSystemType\_V2\_Reserved6*  
*eSystemType\_V2\_Reserved7*  
*eSystemType\_V2\_Reserved8*  
*eSystemType\_V2\_Reserved9*  
*eSystemType\_V2\_Reserved10*

Definition at line 354 of file DCM.idl.

#### 10.98.3.4 enum DCM::DeviceControl::SMX36\_AlgorithmType\_e

Enumerator:

*SMX36\_AlgorithmType\_RateTable* pre-URC version  
*SMX36\_AlgorithmType\_URC* Unified Rate Control.

*SMX36\_AlgorithmType\_reserved1*  
*SMX36\_AlgorithmType\_reserved2*  
*SMX36\_AlgorithmType\_reserved3*  
*SMX36\_AlgorithmType\_reserved4*  
*SMX36\_AlgorithmType\_reserved5*  
*SMX36\_AlgorithmType\_reserved6*  
*SMX36\_AlgorithmType\_reserved7*  
*SMX36\_AlgorithmType\_reserved8*

Definition at line 23869 of file DCM.idl.

#### 10.98.3.5 enum DCM::DeviceControl::SMX36\_CoS\_e

Enumerator:

*SMX36\_CoS\_Routine*  
*SMX36\_CoS\_Priority*  
*SMX36\_CoS\_Immediate*  
*SMX36\_CoS\_Flash*  
*SMX36\_CoS\_FlashOverride*  
*SMX36\_CoS\_CriticECP*  
*SMX36\_CoS\_InternetnetworkControl*  
*SMX36\_CoS\_NetworkControl*

Definition at line 23628 of file DCM.idl.

#### 10.98.3.6 enum DCM::DeviceControl::SMX36\_EncoderStatus\_e

Enumerator:

*SMX36\_EncoderStatus\_Disconnected*  
*SMX36\_EncoderStatus\_Connected*

Definition at line 23928 of file DCM.idl.

#### 10.98.3.7 enum DCM::DeviceControl::SMX36\_PoolGuaranteeMinRateMode\_e

Enumerator:

*SMX36\_PoolGuaranteeMinRateOff*  
*SMX36\_PoolGuaranteeMinRateON*

Definition at line 23774 of file DCM.idl.

#### 10.98.3.8 enum DCM::DeviceControl::SMX36\_PoolSafeRateMode\_e

Enumerator:

*SMX36\_PoolSafeRateMode\_Default*  
*SMX36\_PoolSafeRateMode\_Min*  
*SMX36\_PoolSafeRateMode\_Reserved* Not used.

Definition at line 23767 of file DCM.idl.

**10.98.3.9 enum DCM::DeviceControl::SMX36\_QoSMode\_e**

QoS for D9036 Statmux Device.

**Note**

Placed at device level in the GUI.

**Version**

release 9.0

**Enumerator:**

*SMX36\_QoSMode\_ToS\_CoS\_Precedence*

*SMX36\_QoSMode\_Differentiated*

*SMX36\_QoSMode\_Custom*

Definition at line 23612 of file DCM.idl.

**10.98.3.10 enum DCM::DeviceControl::SMX36\_StatmuxControllerBackupState\_e****Enumerator:**

*SMX36\_StatmuxControllerBackupState\_Active*

*SMX36\_StatmuxControllerBackupState\_Inactive*

Definition at line 23716 of file DCM.idl.

**10.98.3.11 enum DCM::DeviceControl::SMX36\_ToS\_e****Enumerator:**

*SMX36\_ToS\_Normal*

*SMX36\_ToS\_MinCost*

*SMX36\_ToS\_MaxReliability*

*SMX36\_ToS\_MaxThroughput*

*SMX36\_ToS\_MinDelay*

Definition at line 23619 of file DCM.idl.

**10.98.3.12 enum DCM::DeviceControl::SMX36\_Video\_Rate\_Mode\_e****Enumerator:**

*SMX36\_Video\_Rate\_Mode\_Ignore* Do not enforce certain video rate mode when adding VSE to pool.

*SMX36\_Video\_Rate\_Mode\_Statmux* VSE is running in statmuxed rate mode.

*SMX36\_Video\_Rate\_Mode\_CBR* VSE is running in CBR rate mode.

*SMX36\_Video\_Rate\_Mode\_Capped\_VBR* VSE is running in Capped VBR rate mode.

*SMX36\_Video\_Rate\_Mode\_Reserved1* Reserved for future use.

*SMX36\_Video\_Rate\_Mode\_Reserved2* Reserved for future use.

*SMX36\_Video\_Rate\_Mode\_Reserved3* Reserved for future use.

*SMX36\_Video\_Rate\_Mode\_Reserved4* Reserved for future use.  
*SMX36\_Video\_Rate\_Mode\_Reserved5* Reserved for future use.  
*SMX36\_Video\_Rate\_Mode\_Reserved6* Reserved for future use.  
*SMX36\_Video\_Rate\_Mode\_Reserved7* Reserved for future use.  
*SMX36\_Video\_Rate\_Mode\_Reserved8* Reserved for future use.

Definition at line 24145 of file DCM.idl.

#### 10.98.3.13 enum DCM::DeviceControl::SMX36\_VSE\_Codec\_e

Enumerator:

*SMX36\_VSE\_Codec\_Unknown* Only possible in status case, when encoder is offline and thus Codec is unknown.  
*SMX36\_VSE\_Codec\_Mpeg2* MPEG2 standard.  
*SMX36\_VSE\_Codec\_Avc* H.264 / AVC standard.  
*SMX36\_VSE\_Codec\_Reserved1* Reserved for future use.  
*SMX36\_VSE\_Codec\_Reserved2* Reserved for future use.  
*SMX36\_VSE\_Codec\_Reserved3* Reserved for future use.  
*SMX36\_VSE\_Codec\_Reserved4* Reserved for future use.  
*SMX36\_VSE\_Codec\_Reserved5* Reserved for future use.  
*SMX36\_VSE\_Codec\_Reserved6* Reserved for future use.

Definition at line 24084 of file DCM.idl.

#### 10.98.3.14 enum DCM::DeviceControl::SMX36\_VSE\_Format\_e

Enumerator:

*SMX36\_VSE\_Format\_Unknown* Only possible in status case, when encoder is offline and thus - Format is unknown.  
*SMX36\_VSE\_Format\_SD* Standard definition.  
*SMX36\_VSE\_Format\_HD* High definition.  
*SMX36\_VSE\_Format\_Reserved1* Reserved for future use.  
*SMX36\_VSE\_Format\_Reserved2* Reserved for future use.  
*SMX36\_VSE\_Format\_Reserved3* Reserved for future use.  
*SMX36\_VSE\_Format\_Reserved4* Reserved for future use.  
*SMX36\_VSE\_Format\_Reserved5* Reserved for future use.  
*SMX36\_VSE\_Format\_Reserved6* Reserved for future use.

Definition at line 24097 of file DCM.idl.

#### 10.98.3.15 enum DCM::DeviceControl::SMX36\_VSEBackupState\_e

Enumerator:

*SMX36\_VSEBackupState\_inactive* The Backup is not activated the SafeRate is set on the backup VSE.  
*SMX36\_VSEBackupState\_active* The Backup is activated, backup VSE is active and the main VSE inactive.  
*SMX36\_VSEBackupState\_reserved* reserved for future use.

Definition at line 24315 of file DCM.idl.

**10.98.3.16 enum DCM::DeviceControl::SMX36\_VSEBackupState\_V2\_e****Version**

release 9.10 added suport for safeguard

**Enumerator:**

***SMX36\_VSEBackupState\_inactive\_V2*** The Backup is not activated the SafeRate is set on the backup VSE.

***SMX36\_VSEBackupState\_active\_V2*** The Backup is activated, backup VSE is active and the main VSE inactive.

***SMX36\_VSEBackupState\_inactive\_Safeguard*** Same as inactive but if communication is lost to - Main or Backup VSE the VSE will run saft rate.

***SMX36\_VSEBackupState\_active\_Safeguard*** Same as active but if communication is lost to Main or Backup VSE the VSE will run saft rate.

***SMX36\_VSEBackupState\_reserved\_5*** reserved for future use.

***SMX36\_VSEBackupState\_reserved\_6*** reserved for future use.

***SMX36\_VSEBackupState\_reserved\_7*** reserved for future use.

***SMX36\_VSEBackupState\_reserved\_8*** reserved for future use.

***SMX36\_VSEBackupState\_reserved\_9*** reserved for future use.

***SMX36\_VSEBackupState\_reserved\_10*** reserved for future use.

Definition at line 24323 of file DCM.idl.

**10.98.3.17 enum DCM::DeviceControl::SMX36\_VSEBitRateMode\_e****Enumerator:**

***SMX36\_VSEBitRateMode\_Manual*** User configures the default rates for the VSE.

***SMX36\_VSEBitRateMode\_Auto*** The system calculates the default rates for the VSE.

***SMX36\_VSEBitRateMode\_reserved*** reserved future use

Definition at line 24032 of file DCM.idl.

**10.98.3.18 enum DCM::DeviceControl::SMX36\_VSEDelay\_e****Enumerator:**

***SMX36\_VSEDelay\_Normal***

***SMX36\_VSEDelay\_Low***

***SMX36\_VSEDelay\_High***

Definition at line 23980 of file DCM.idl.

**10.98.3.19 enum DCM::DeviceControl::SMX36\_VSEDelay\_V2\_e****Enumerator:**

***SMX36\_VSEDelay\_V2\_Normal***

***SMX36\_VSEDelay\_V2\_Low***

***SMX36\_VSEDelay\_V2\_High***

*SMX36\_VSEDelay\_Reserved1*  
*SMX36\_VSEDelay\_Reserved2*  
*SMX36\_VSEDelay\_Reserved3*  
*SMX36\_VSEDelay\_Reserved4*  
*SMX36\_VSEDelay\_Reserved5*  
*SMX36\_VSEDelay\_Reserved6*

Definition at line 23987 of file DCM.idl.

#### 10.98.3.20 enum DCM::DeviceControl::SMX36\_VSEStatus\_e

Enumerator:

*SMX36\_VSEStatus\_Disconnected* Unable to communicate with VSE.  
*SMX36\_VSEStatus\_Running* Statmuxing.  
*SMX36\_VSEStatus\_Running\_Safe* Statmuxing but running with SAfe rate.  
*SMX36\_VSEStatus\_Not\_Running* Not configured to run statmux.  
*SMX36\_VSEStatus\_CBR* Constant bitrate mode.  
*SMX36\_VSEStatus\_Capped\_VBR* Varialbe bitrate mode.

Definition at line 24022 of file DCM.idl.

#### 10.98.3.21 enum DCM::DeviceControl::SMX\_VSEBackedupState\_e

Enumerator:

*SMX36\_VSEBackedupStat\_no* The VSE is not backedup by an other VSE.  
*SMX36\_VSEBackedupStat\_yes* The VSE is curently backedup by an other VSE see backuplist.

Definition at line 24039 of file DCM.idl.

### 10.98.4 Member Function Documentation

#### 10.98.4.1 SMX36\_Community\_t DCM::DeviceControl::SMX36\_Community\_Get ( ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Community\\_Get\(\)](#) Reads the community parameters for the device i.e. all boards in the device.

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.2** void DCM::DeviceControl::SMX36\_Community\_Set ( in SMX36\_Community\_t Community ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Community\\_Set\(in SMX36\\_Community\\_t Community\)](#) Sets the community parameters for the device i.e.

all boards in the device.

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.3** SMX36\_StatmuxControllerList\_t DCM::DeviceControl::SMX36\_Controllers\_GetL ( in long Id ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

SMX36\_StatmuxControllerList\_t [SMX36\\_Controllers\\_GetL\( in long Id \)](#) Reads the statmux controller parameters.

#### Note

If the Id equal or less than -1 all statmux controlers within the statmux community is listed.

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

#### Version

release 9.0

**10.98.4.4** SMX36\_AlgorithmIdentifier\_t DCM::DeviceControl::SMX36\_DefaultAlgorithm\_Get ( ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_DefaultAlgorithm\\_Get\(\)](#) Retrieve the default selected algorithm for a pool.

#### Note

Currently this is the algorithm as used by all pools.

#### Version

release 11.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.5** void DCM::DeviceControl::SMX36\_DefaultAlgorithm\_Set ( in SMX36\_Algorithm-Identifier\_t *DefaultAlgorithm* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_DefaultAlgorithm\\_Set\( in SMX36\\_AlgorithmIdentifier\\_t DefaultAlgorithm \)](#) Set the algorithm to be used by all pools.

#### Note

Currently this is a system wide enforcement. As such it will stop all pools and and restart them (service affecting!) if the new setting is different than the current one.

#### Version

release 11.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.6** long DCM::DeviceControl::SMX36\_Encoder\_Create ( in string *EncoderIPAddress* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Encoder\\_Create\( in string EncoderIPAddress \)](#) creates an encoder and return the Id.

#### Note

If The EncoderIPAdress already have been used no encoder will be created and the return will be zero.

#### Version

release 9.0

#### Exceptions

|                       |                                             |
|-----------------------|---------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing.  |
| <i>OpNotSucceeded</i> | unable to create encoder or Internal error. |

**10.98.4.7** void DCM::DeviceControl::SMX36\_Encoder\_DeleteL ( in SMX36\_EncoderIdList\_t *EncoderIdlist* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**10.98.4.8** SMX36\_EncoderList\_t DCM::DeviceControl::SMX36\_Encoder\_GetL ( in long *Encoderid* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Encoder\\_GetL\( in long Encoderid\)](#) Reads the Encoder parameters.

#### Note

If the Id equal to -1 all Encoder's in the statmux community are listed.

**Version**

release 9.0

**Exceptions**

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.9** unsigned short DCM::DeviceControl::SMX36\_GetStartingUdpPort ( ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_GetStartingUdpPort\(\)](#) Reads the starting UDP port number given to the SPS to be used for communication with the SPSs.

**Version**

release 9.0

**Exceptions**

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.10** long DCM::DeviceControl::SMX36\_Pool\_Create ( in string *PoolName*, in unsigned long *PoolBandwidth*, in unsigned short *PoolMaxVSECapacity* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

SMX36\_Pool\_Create(in string PoolName) creates a pool and return the Id.

**Note**

If The Name already exist no pool will be created and the return Id will be zero. If it is not possible to allocate the resources for the Pool the call will return OperationFailed. The Pool will be created with the following parameter values: BandwidthOverhead = 0, STickLength = 30, SafeRateMode = SMX36\_PoolSafeRateMode\_Default, GuaranteeMinRateMode = SMX36\_PoolGuaranteeMinRateOff.

**Version**

release 9.0

**Exceptions**

|                       |                                                      |
|-----------------------|------------------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing.           |
| <i>OpNotSucceeded</i> | Unable to create pool or an internal error occurred. |

**10.98.4.11** void DCM::DeviceControl::SMX36\_Pool\_DeleteL ( in SMX36\_PoolIdList\_t *PoolIdlist* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**10.98.4.12** SMX36\_PoolList\_t DCM::DeviceControl::SMX36\_Pool\_GetL ( in long *poolid* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Pool\\_GetL\(in long poolid\)](#) Reads the Pool parameters.

#### Note

If the Id is less or equal to -1 all pool's in the statmux community is listed.

#### Version

release 9.0 (V2->V11.00)

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.13** void DCM::DeviceControl::SMX36\_Pool\_SetL ( in SMX36\_PoolList\_t *Poollist* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_Pool\\_SetL\(in SMX36\\_PoolList\\_t Poollist\)](#) Sets the parameters for the pool in the list.

#### Version

release 9.0 (V2->V11.00)

#### Exceptions

|                       |                                            |

| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.14** SMX36\_PoolList\_V2\_t DCM::DeviceControl::SMX36\_Pool\_V2\_GetL ( in long *poolid* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**10.98.4.15** void DCM::DeviceControl::SMX36\_Pool\_V2\_SetL ( in SMX36\_PoolList\_V2\_t *Poollist* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

**10.98.4.16** unsigned short DCM::DeviceControl::SMX36\_PortPairSetup\_Get ( in unsigned short *BoardNr* ) raises (TimeOut, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_PortPairSetup\\_Get\(in unsigned short BoardNr\)](#) Reads the used Physical PortPair number 0=pairA 2=pairB.

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>TimeOut</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.17** void DCM::DeviceControl::SMX36\_PortPairSetup\_Set ( in unsigned short *BoardNr*,  
in unsigned short *PortNumber* ) raises (Timeout, OpNotSucceeded, OperationFailed,  
OpNotAllowed, OpNotSupported)

[SMX36\\_PortPairSetup\\_Set](#)(in unsigned short *BoardNr*, in unsigned short *PortNumber*) Sets the used -  
Physical PortPair [0,2].

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>Timeout</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.18** SMX36\_NetworkQoS\_t DCM::DeviceControl::SMX36\_QoS\_Get ( ) raises (Timeout,  
OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_QoS\\_Get](#)() Reads the QoS parameters for all statmux communication in the Device.

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>Timeout</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Internal error.                            |

**10.98.4.19** void DCM::DeviceControl::SMX36\_QoS\_Set ( in SMX36\_NetworkQoS\_t *QoS* ) raises  
(Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed, OpNotSupported)

[SMX36\\_QoS\\_Set](#)(in SMX36\_NetworkQoS\_t *QoS*) Sets the QoS parameters for all statmux communica-  
tion in the Device.

#### Version

release 9.0

#### Exceptions

|                       |                                            |
|-----------------------|--------------------------------------------|
| <i>Timeout</i>        | A timeout occurred during IIOP processing. |
| <i>OpNotSucceeded</i> | Set failed.                                |

**10.98.4.20** void DCM::DeviceControl::SMX36\_SetStartingUdpPort ( in unsigned short  
*StartingUdpPort* ) raises (Timeout, OpNotSucceeded, OperationFailed, OpNotAllowed,  
OpNotSupported)

[SMX36\\_SetStartingUdpPort](#)(in unsigned short *StartingUdpPort*) Sets the starting UDP port number given  
to the SPS to be used for communication with the SPSs.

**Version**

release 9.0

**Exceptions**

|                       |                                            |

Structure to find a specific TS by port and input stream identifier.

Definition at line 7648 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.113 DCM::DeviceControl::DvbS2\_RefTS\_t Struct Reference

Structure containing the looked-up transport stream for a given lookupTS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::DvbS2\_RefTS\_t:

#### Public Attributes

- [DvbS2\\_LookupTS\\_t LookupTS](#)  
the TS that needed looking up.
- [IPS\\_RefTS\\_t RefTS](#)  
TS references of the looked up TS. If not found, RefTS.Ref is set to `INVALID_ITF_REF`.

#### 10.113.1 Detailed Description

Structure containing the looked-up transport stream for a given lookupTS.

Definition at line 7658 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.114 DCM::DeviceControl::EasConfig\_t Struct Reference

Represents the configuration of an EAS proxy.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::EasConfig\_t:

## Public Attributes

- unsigned long **EasId**  
*Identifies the EAS proxy.*
- **IPS\_Ref\_t** **NetworkInterface**  
*Specify BoardNr = 0 and PortNr = 0 for the 10/100 management network interface and PortNr = 1 for the GbE CA network interface.*
- unsigned short **UdpPort**  
*UDP port number the EAS proxy is listening on. When not yet yet configured UdpPort will be 0, meaning that the EAS proxy is not listening on a socket. UdpPorts are unique per network interface.*
- string **Name**  
*a user friendly name identifying the proxy. Names must be unique. Upper/lower case and white space are ignored in the uniqueness check.*
- **IPS\_RefTS\_t** **RefTs**  
*(Read-only) TS reference assigned to the newly created EAS proxy. This TS reference is to be used in the the SetSI\_Generation call. Note: the client SW should not make any assumptions on how the RefTs is generated. The only assurance is that the same RefTs will be assigned after a reboot.*
- **enumEasProtocol\_t** **Protocol**  
*protocol used by EAS proxy.*
- boolean **bTextCrawl**  
*enable participation of the proxy in text crawl generation.*
- **enumEasSocketType\_t** **eSocketType**  
*the type of socket. In case of multicast, also the IP\_Addr field must be filled in.*
- string **IP\_Addr**  
*IP address in case of multicast.*
- unsigned short **UsageBitmap**  
*(Read-only) bitmap showing the I/O boards using the proxy. bit0 = main board, bit1 = I/O board 1, bit2 = I/O board 2, etc.*

## 10.114.1 Detailed Description

Represents the configuration of an EAS proxy.

Definition at line 28983 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.115 DCM::DeviceControl::EMM\_Data\_t Struct Reference

Identification of EMMG EMMs.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::EMM\_Data\_t:

## Public Attributes

- `string` [ProxyName](#)
- `ePID_Type` [Type](#)
- unsigned long [ClientID](#)
- unsigned long [ChannelID](#)
- unsigned long [StreamID](#)
- unsigned long [DataID](#)

- [InEMM\\_Ref\\_t EMM\\_Ref](#)

#### 10.115.1 Detailed Description

Identification of EMMG EMMs.

Definition at line 2633 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.116 DCM::DeviceControl::End2End\_Delay\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::End2End\_Delay\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefOut](#)
- unsigned long [Delay](#)

## 10.116.1 Detailed Description

Definition at line 30213 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.117 DCM::DeviceControl::EndDeviceEntry\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::EndDeviceEntry\_t:

## Public Attributes

- [string IP\\_Addr](#)
- [eDestRoutingStatus RoutingStatus](#)  
*routable or not*
- [eDestArpStatus ARPStatus](#)  
*1) if LAN: ARPStatus of end device 2) if GW: ARPStatus of GW*
- [IPS\\_Ref\\_t RefPhys](#)

## 10.117.1 Detailed Description

Definition at line 19032 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.118 DCM::DeviceControl::ES\_TypeSetting\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ES\_TypeSetting\_t:

#### Public Attributes

- unsigned short [OutputPid](#)
- octet [ES\\_Type](#)

#### 10.118.1 Detailed Description

Definition at line 5847 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.119 DCM::DeviceControl::EsEntry\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::EsEntry\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t RefSvcOut](#)
- [IPS\\_RefPid\\_t SrcPidRef](#)
- `octet EsType`

### 10.119.1 Detailed Description

Definition at line 12867 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.120 DCM::DeviceControl::ETTV\_ContentData\_t Struct Reference

Structure that contains status about the Content of an ETTV.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETTV\_ContentSetting\_t:

#### Public Attributes

- [IPS\\_Service\\_t](#) RefServ
- [MultipleString\\_t](#) Content
- boolean Forcing

#### 10.121.1 Detailed Description

Structure combining service-id with settings.

Definition at line 9640 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.122 DCM::DeviceControl::ETV\_ApplicationIdent\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_ApplicationIdent\_t:

### Public Attributes

- unsigned long [OrgId](#)
- unsigned short [AppId](#)
- [AppInstanceId\\_t](#) [AppInstanceId](#)  
*Reseved for future use. Must be empty sequence.*
- unsigned long [StartTime](#)  
*Reseved for future use. Must be 0.*
- unsigned long [EndTime](#)  
*Reseved for future use. Must be 0xFFFFFFFF.*

#### 10.122.1 Detailed Description

Definition at line 17340 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.123 DCM::DeviceControl::ETV\_EissFilter\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_EissFilter\_t:

### Public Attributes

- `IPS_RefSvc_t` `OutputSvc`  
*Reference to the output service.*
- `boolean` `EnableFilter`  
*if true, the filter is enabled*
- `boolean` `WhiteList`  
*if true, the filter list is a white list and others are blocked*
- `ETV_ApplicationIdent_List_t` `Filter`

#### 10.123.1 Detailed Description

Definition at line 17351 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- `DCM.idl`

## 10.124 DCM::DeviceControl::ETV\_Insertion\_Settings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_Insertion\_Settings\_t:

### Public Attributes

- [eETV\\_InsertionChannel\\_Mode\\_t](#) ETV\_Insertion\_Mode
- [IPS\\_RefSvc\\_t](#) ETV\_OtherSvc

*Only applicable if primary mode is eUseOtherServiceETV\_Pids.*

#### 10.124.1 Detailed Description

Definition at line 17166 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.125 DCM::DeviceControl::ETV\_Insertion\_Settings\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_Insertion\_Settings\_V2\_t:

### Public Attributes

- [eETV\\_InsertionChannel\\_Mode\\_V2\\_t](#) [ETV\\_Insertion\\_Mode](#)
- [IPS\\_RefSvc\\_t](#) [ETV\\_OtherSvc](#)

*Only applicable if primary mode is eAdSvc\_V2\_UseOtherServiceETV\_Pids or eAdSvc\_V2\_MergeEISS\_Pids.*

### 10.125.1 Detailed Description

Definition at line 17285 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.126 DCM::DeviceControl::ETV\_ManipulationSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_ManipulationSettings\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t OutputSvc](#)  
*Reference to the output service.*
- [ETV\\_Primary\\_Settings\\_t ETV\\_Primary\\_Settings](#)
- [ETV\\_Insertion\\_Settings\\_t ETV\\_Insertion\\_Settings](#)

### 10.126.1 Detailed Description

Definition at line 17172 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.127 DCM::DeviceControl::ETV\_ManipulationSettings\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_ManipulationSettings\_V2\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t OutputSvc](#)  
*Reference to the output service.*
- [ETV\\_Primary\\_Settings\\_V2\\_t ETV\\_Primary\\_Settings](#)
- [ETV\\_Insertion\\_Settings\\_V2\\_t ETV\\_Insertion\\_Settings](#)

### 10.127.1 Detailed Description

Definition at line 17292 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.128 DCM::DeviceControl::ETV\_Primary\_Settings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_Primary\_Settings\_t:

## Public Attributes

- [eETV\\_PrimaryChannel\\_Mode\\_t](#) [ETV\\_Primary\\_Mode](#)
- [IPS\\_RefSvc\\_t](#) [ETV\\_OtherSvc](#)  
Only applicable if primary mode is *eUseOtherServiceETV\_Pids*.
- unsigned short [EISS\\_Pid](#)  
Only applicable if primary mode is *eUseDummyETV\_Pids*.
- unsigned short [EBIF\\_Pid](#)  
Only applicable if primary mode is *eUseDummyETV\_Pids*.

## 10.128.1 Detailed Description

Definition at line 17150 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.129 DCM::DeviceControl::ETV\_Primary\_Settings\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ETV\_Primary\_Settings\_V2\_t:

## Public Attributes

- [eETV\\_PrimaryChannel\\_Mode\\_V2\\_t](#) [ETV\\_Primary\\_Mode](#)
- [IPS\\_RefSvc\\_t](#) [ETV\\_OtherSvc](#)

*Only applicable if primary mode is eMainSvc\_V2\_UseOtherServiceETV\_Pids or eMainSvc\_V2\_MergeEISS\_Pids.*

- unsigned short [EISS\\_Pid](#)

*Only applicable if primary mode is eUseDummyETV\_Pids.*

- unsigned short [EBIF\\_Pid](#)

*Only applicable if primary mode is eUseDummyETV\_Pids.*

## 10.129.1 Detailed Description

Definition at line 17262 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.130 DCM::DeviceControl::ExtIpServiceCtrl Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ExtIpServiceCtrl:

#### Public Attributes

- [eExtIpServices Service](#)
- boolean [bEnabled](#)

#### 10.130.1 Detailed Description

Definition at line 24574 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.131 DCM::DeviceControl::FCS\_Scte35\_CommandSelect\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FCS\_Scte35\_CommandSelect\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t SvcOut](#)
- [enFCS\\_Scte35\\_Commands CommandSelect](#)
- [IPS\\_RefSvc\\_t SwitchToLocalSvc](#)

### 10.131.1 Detailed Description

Definition at line 8772 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.132 DCM::DeviceControl::Feature\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Feature\_t:

### Public Attributes

- [eFeatureState](#) [Status](#)
- [eFeatureInstallState](#) [Install](#)
- [eFeatureType](#) [Type](#)
- [eFeatureExpireState](#) [Expired](#)
- [string](#) [Name](#)  
*Max string length 36.*
- [string](#) [Version](#)  
*Max string length 36.*
- [string](#) [Date](#)  
*Max string length 36.*
- [string](#) [Key](#)  
*Max string length 36.*
- [long](#) [Count](#)
- [long](#) [Used](#)
- [long](#) [TimeLeft](#)

#### 10.132.1 Detailed Description

Definition at line 20531 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.133 DCM::DeviceControl::FeatureUsage\_t Struct Reference

Represents the license usage count per feature.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FeatureUsage\_t:

#### Public Attributes

- string [FeatureName](#)  
*unique name identifying the feature.*
- long [UsageCount](#)  
*the number of licenses in use for this feature.*

#### 10.133.1 Detailed Description

Represents the license usage count per feature.

Definition at line 20695 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.134 DCM::DeviceControl::FEC\_Dec\_Setting\_t Struct Reference

FEC decoder settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Dec\_Setting\_t:

#### Public Attributes

- [eFECDecMode Mode](#)
- [IPS\\_UDP\\_Socket\\_t ColFEC](#)
- [IPS\\_UDP\\_Socket\\_t RowFEC](#)
- [boolean FollowDefaultRule](#)

*readonly flag indicating if FEC Default Rule settings are used*

#### 10.134.1 Detailed Description

FEC decoder settings.

Definition at line 19119 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.135 DCM::DeviceControl::FEC\_Dec\_Statistics\_t Struct Reference

FEC decoder statistics.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Dec\_Statistics\_t:

### Public Attributes

- unsigned long long [ValidPacketCount](#)
- unsigned long long [MissingPacketCount](#)
- unsigned long long [FixedPacketCount](#)
- unsigned long long [DuplicatePacketCount](#)
- unsigned long long [ReorderedPacketCount](#)
- unsigned long long [OutOfRangePacketCount](#)

### 10.135.1 Detailed Description

FEC decoder statistics.

Definition at line 19154 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.136 DCM::DeviceControl::FEC\_Dec\_Status\_t Struct Reference

FEC decoder status.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Dec\_Status\_t:

### Public Attributes

- boolean [ColFEC\\_Present](#)
- boolean [RowFEC\\_Present](#)
- unsigned short [D\\_ColDepth](#)
- unsigned short [L\\_RowLength](#)
- unsigned short [ColFEC\\_Overhead](#)  
*in percentage fixed point 2 digit (x100)*
- unsigned short [RowFEC\\_Overhead](#)  
*in percentage fixed point 2 digit (x100)*
- unsigned short [TotalOverhead](#)  
*in percentage fixed point 2 digit (x100)*
- unsigned short [Latency](#)  
*in ms fixed point 1 digit (x10)*

#### 10.136.1 Detailed Description

FEC decoder status.

Definition at line 19175 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.137 DCM::DeviceControl::FEC\_Enc\_ErrorGen\_t Struct Reference

FEC error generation parameters.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Enc\_ErrorGen\_t:

#### Public Attributes

- [eFECErrorMode Mode](#)
- unsigned short [NrGoodPackets](#)  
*number of good packets (IPGW: range 1..65535)*
- unsigned short [NrErrorPackets](#)  
*number of error packets (IPGW: range 1..512)*

#### 10.137.1 Detailed Description

FEC error generation parameters.

Definition at line 19436 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.138 DCM::DeviceControl::FEC\_Enc\_Overhead\_t Struct Reference

Bitrate overhead, due to FEC encoding.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Enc\_Overhead\_t:

#### Public Attributes

- unsigned short [ColFEC\\_Overhead](#)  
*in percentage fixed point 2 digit (x100), e.g. 10% -> 1000*
- unsigned short [RowFEC\\_Overhead](#)  
*in percentage fixed point 2 digit (x100), e.g. 10% -> 1000*
- unsigned short [TotalOverhead](#)  
*in percentage fixed point 2 digit (x100), e.g. 10% -> 1000*

#### 10.138.1 Detailed Description

Bitrate overhead, due to FEC encoding.

Definition at line 19451 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.139 DCM::DeviceControl::FEC\_Enc\_Setting\_t Struct Reference

FEC encoder settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Enc\_Setting\_t:

### Public Attributes

- [eFECEncMode Mode](#)  
*default value is FEC disabled*
- [eFECSendingArrangement SendingArrangement](#)  
*for 4.0 release, SendingArrangement must always be ePRO\_MPEG\_COP3\_ANNEX\_B*
- [IPS\\_UDP\\_Socket\\_t ColFEC](#)  
*for 4.0 release, IP = IP TS and UDP = UDP TS + 2*
- [IPS\\_UDP\\_Socket\\_t RowFEC](#)  
*for 4.0 release, IP = IP TS and UDP = UDP TS + 4*
- unsigned short [D\\_ColDepth](#)  
*default value D = 6*
- unsigned short [L\\_RowLength](#)  
*default value L = 10*

### 10.139.1 Detailed Description

FEC encoder settings.

Definition at line 19366 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.140 DCM::DeviceControl::FEC\_Enc\_Setting\_V2\_t Struct Reference

FEC encoder settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FEC\_Enc\_Setting\_V2\_t:

### Public Attributes

- [eFECEncMode Mode](#)  
*default value is FEC disabled*
- [eFECSendingArrangement SendingArrangement](#)  
*for 4.0 release, SendingArrangement must always be ePRO\_MPEG\_COP3\_ANNEX\_B*
- unsigned short [D\\_ColDepth](#)  
*default value D = 6*
- unsigned short [L\\_RowLength](#)  
*default value L = 10*

### 10.140.1 Detailed Description

FEC encoder settings.

Definition at line 19389 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.141 DCM::DeviceControl::FontCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::FontCfg\_t:

#### Public Attributes

- [FontCfgID\\_t FontCfglD](#)  
*unique font configuration identifier (must be 0 when adding a new font configuration)*
- [string FontCfgName](#)  
*font configuration name, maximum 64 characters*
- [unsigned long FontProperty](#)  
*Read only Bitmap.*

#### 10.141.1 Detailed Description

Definition at line 13782 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.142 DCM::DeviceControl::ForbiddenPidRange\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ForbiddenPidRange\_t:

#### Public Attributes

- unsigned short [LowerPidValue](#)  
*Lower limit of the forbidden pid range.*
- unsigned short [UpperPidValue](#)  
*Upper limit of the forbidden pid range (should be > LowerPidValue)*

#### 10.142.1 Detailed Description

Definition at line 3720 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.143 DCM::DeviceControl::GbEFramesRecv\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::GbEFramesRecv\_t:

### Public Attributes

- sequence< string > Filter

### 10.154.1 Detailed Description

Definition at line 20124 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.155 DCM::DeviceControl::IIOP\_SubTable\_t Struct Reference

Structure containing the properties a SubTable provisioned via IIOP.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IIOP\_SubTable\_t:

### Public Attributes

- unsigned long [OnId](#)  
*original network ID of targeted output TS.*
- unsigned long [TsId](#)  
*transport stream ID of targeted output TS.*
- [TableKeys\\_t](#) [TableKeys](#)  
*identifies the sub-table.*
- unsigned short [Pid](#)  
*the output PID where the sub-table is played out.*
- boolean [bPureImport](#)  
*indicates if playout is identical to binary data. This parameter is not taken into account in the Delete-ImportedSubTableL call.*

#### 10.155.1 Detailed Description

Structure containing the properties a SubTable provisioned via IIOP.

Definition at line 8391 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.156 DCM::DeviceControl::InEMM\_Ref\_t Struct Reference

Identification of which PID to be created/deleted. Note this is duplicated by RefPid\_t but must remain for backwards compatability.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InEMM\_Ref\_t:

### Public Attributes

- [IPS\\_RefTS\\_t m\\_RefTS](#)  
*The Slot, Port and Index of the input TS.*
- unsigned short [m\\_usPID](#)  
*The reference to the input EMM pid.*

#### 10.156.1 Detailed Description

Identification of which PID to be created/deleted. Note this is duplicated by RefPid\_t but must remain for backwards compatability.

Definition at line 2624 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.157 DCM::DeviceControl::InPID\_Data\_t Struct Reference

Identification of which PID to be (un)blocked.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPID\_Data\_t:

### Public Attributes

- [IPS\\_RefTS\\_t m\\_RefTS](#)  
*The Slot, Port and Index of the input TS.*
- unsigned short [m\\_usPID](#)  
*The reference to the input pid to be blocked Is a service ES pid or EMM pid at TS level when m\_ulOutputSID is INVALID\_SID\_VALUE.*
- unsigned short [m\\_usECM\\_PID](#)  
*Value of the ES ECMPID at the input TS when PID is valid or the ECM pid at service level.*

### 10.157.1 Detailed Description

Identification of which PID to be (un)blocked.

Definition at line 5710 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.158 DCM::DeviceControl::InPort\_8VSB\_Config\_t Struct Reference

Represents the 8VSB input port specific settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_8VSB\_Config\_t:

### Public Attributes

- [IPS\\_Ref\\_t](#) [InputPortRef](#)  
*Reference of the 8VSB input port.*
- long [SignalLowThreshold](#)  
*In dBm. Valid range is -80 to -20.*
- long [SignalHighThreshold](#)  
*In dBm. Valid range is -80 to -20.*
- unsigned long [MER\\_Threshold](#)  
*in dB. Valid range is 15 to 35.*

#### 10.158.1 Detailed Description

Represents the 8VSB input port specific settings.

The SignalHighThreshold must be equal to or greater than the SignalLowThreshold.

#### Version

Release 8.1

Release 8.5 MER threshold range has been restricted to 15..35 (instead of 0..40).

Definition at line 7098 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.159 DCM::DeviceControl::InPort\_8VSB\_Statistics\_t Struct Reference

Defines the statistics that can be retrieved per 8VSB input port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_8VSB\_Statistics\_t:

#### Public Attributes

- [IPS\\_Ref\\_t](#) [InputPortRef](#)  
*Reference of the 8VSB input port.*
- long [InputLevel](#)

Signal level in dBm. If the input level is out of range the InputLevel is set to the minimum or maximum long value, e.g. 2147483647 in case of above measurement range or -2147483648 in case of below measurement range.

- unsigned long [MER](#)  
*Modulation Error Ratio in dB.*
- long [BER](#)  
*(future) Bit Error Rate (errored bits per second).*
- unsigned long long [RS\\_FEC\\_Correctable](#)  
*Number of correctable RS FEC errors.*
- unsigned long long [RS\\_FEC\\_Uncorrectable](#)  
*Number of uncorrectable RS FEC errors.*
- unsigned long long [RS\\_FEC\\_Clean](#)  
*Number of clean RS blocks.*

### 10.159.1 Detailed Description

Defines the statistics that can be retrieved per 8VSB input port.

Fields indicated for future use will get a default value, e.g. 0.

#### Version

Release 8.1

Definition at line 7114 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.160 DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t Struct Reference

Tuning parameters for an 8VSB input port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_8VSB\_TuningParams\_t:

## Public Attributes

- [IPS\\_Ref\\_t](#) [InputPortRef](#)  
*Reference of the input port.*
- [short](#) [ChannelNbr](#)  
*A value from 1 to 82. Negative if frequency is used.*
- [unsigned long](#) [Frequency](#)  
*In KHz. Valid range is 47000 to 885000, multiples of 125.*
- [boolean](#) [IsLocked](#)  
*Output parameter indicating whether tuner is locked to channel.*
- [long](#) [InputLevel](#)  
*Output parameter indicating signal level in dBm. If the input level is out of range the InputLevel is set to the minimum or maximum long value, e.g. 2147483647 in case of above measurement range or -2147483648 in case of below measurement range.*

### 10.160.1 Detailed Description

Tuning parameters for an 8VSB input port.

The selection of the channel can be done by means of the ChannelNbr or the Frequency. If the ChannelNbr is a non-negative value, the ChannelNbr will be used for tuning (the frequency corresponding to the channel number is used). The Frequency is ignored in that case. In order to tune to a custom frequency, the ChannelNbr must be set to a negative value, e.g. -1 and a valid frequency needs to be filled in.

## Version

Release 8.1

Definition at line 7077 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.161 DCM::DeviceControl::InPort\_DvbS2\_Counters\_t Struct Reference

Structure containing the different counters per DVB S2 port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_DvbS2\_Counters\_t:

### Public Attributes

- [IPS\\_Ref\\_t](#) *RefPhys*  
*port identifier*
- unsigned long long [BCH\\_UncorrectedErrors](#)
- unsigned long long [RS\\_UncorrectedErrors](#)
- unsigned long long [ErroredSeconds](#)
- unsigned long long [SeverelyErroredSeconds](#)
- unsigned long long [PacketsErrorCount](#)
- unsigned long long [TotalPacketsCount](#)

### 10.161.1 Detailed Description

Structure containing the different counters per DVB S2 port.

Definition at line 7588 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.162 DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t Struct Reference

Structure used to configure the DVB S2 LNC.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_DvbS2\_LncCfg\_t:

### Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)  
*port identifier*
- [eDvbS2\\_LncType\\_t LncType](#)  
*single band / dual band*
- unsigned long [LoFrequency](#)  
*(single + dual) 1000000..20000000 KHz, step 125 KHz*
- unsigned long [LoFrequencyHigh](#)  
*(dual only) 1000000..20000000 KHz, step 125 KHz*
- boolean [bLncBias](#)  
*true to enable, false to disable (default)*

### 10.162.1 Detailed Description

Structure used to configure the DVB S2 LNC.

Definition at line 7483 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.163 DCM::DeviceControl::InPort\_DvbS2\_PortConfig\_t Struct Reference

Structure used to configure single stream or multi-stream mode per port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_DvbS2\_PortConfig\_t:

### Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)  
*port identifier*
- [eDvbS2\\_RxMode\\_t RxMode](#)  
*single stream of multi-stream mode.*

#### 10.163.1 Detailed Description

Structure used to configure single stream or multi-stream mode per port.

Definition at line 7384 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.164 DCM::DeviceControl::InPort\_DvbS2\_Status\_t Struct Reference

Structure used to retrieve status information of a DVB S2 port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_DvbS2\_Status\_t:

## Public Attributes

- [IPS\\_Ref\\_t](#) [RefPhys](#)  
*port identifier*
- [boolean](#) [bIsLocked](#)  
*true if locked, false if not locked*
- [long](#) [InputLevel](#)
- [short](#) [CN\\_Level](#)
- [short](#) [CN\\_Margin](#)
- [unsigned long](#) [BER](#)  
*units of 1E-10. Eg. 1000 represents 1E-7.*
- [eDvbS2\\_Mode\\_t](#) [DVBS\\_Mode](#)  
*Detected mode: DVB-S or DVB-S2.*
- [eDvbS2\\_Constellation\\_t](#) [Constellation](#)  
*Constellation.*
- [eDvbS2\\_FEC\\_CodeRate\\_t](#) [FEC\\_CodeRate](#)  
*FEC code rate.*
- [unsigned long](#) [TunerFrequency](#)  
*950000 ' 2150000 KHz*
- [eDvbS2\\_LNC\\_Band\\_t](#) [LNC\\_Band](#)  
*actual RF band (low or high)*
- [eDvbS2\\_SpectrumInversion\\_t](#) [SpectrumInversion](#)
- [eDvbS2\\_RxMode\\_t](#) [DetectedMode](#)

*single stream or multi-stream detected.*

- [eDvbS2\\_MA\\_Type\\_t MA\\_Type](#)

*Coding and modulation type.*

#### 10.164.1 Detailed Description

Structure used to retrieve status information of a DVB S2 port.

Remarks: When the port is not locked, following fields are not relevant:

- CN\_Level
- CN\_Margin
- BER
- DVBS\_Mode
- Constellation
- FEC\_CodeRate
- SpectrumInversion
- DetectedMode
- MA\_Type

The BER, CN\_Margin, FEC\_CodeRate and Constellation are only valid if the MA\_Type is equal to CCM (constant coding and modulation).

Definition at line 7545 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.165 DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t Struct Reference

Structure used to configure the DVB S2 tuner.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::InPort\_DvbS2\_TunerCfg\_t:

## Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)  
*port identifier*
- [eDvbS2\\_Mode\\_t Mode](#)  
*auto, DVB-S, DVB-S2*
- unsigned long [SatFrequency](#)  
*in KHz*
- unsigned long [SymbolRate](#)  
*in KSym/s (1000..45000)*
- [eDvbS2\\_Polarization\\_t Polarization](#)  
*horizontal or vertical*
- [eDvbS2\\_BandSelection\\_t BandSelection](#)

Input Transport stream reason for existence bitmap.

The bits in the bitmap indicate the specific reasons :

- bit 0: IsPassedToOutput
- bit 1: IsBackupSource
- bit 2: TwoMinuteTimerRunning
- bit 3: HasSpecificServiceLossSettings
- bit 4: HasSpecificTsLossSettings
- bit 5: HasSpecificFEC\_Settings
- bit 6: HasCompactCA\_Settings

- bit 7: HasTsBackupSettings
- bit 8: HasSpecificStandardSetting
- bit 9: HasSpecificTimeBaseSelection
- bit 10: SignalPresent
- bit 11: HasPriorityBitSettings
- bit 12: HasInterpreterSettings
- bit 13: HasThresholdMonSettings
- bit 14: HasHitlessMergeSettings

#### 10.211.1 Detailed Description

Definition at line 17913 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.212 DCM::DeviceControl::IPS\_Ref\_t Struct Reference

General location of a physical or virtual port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_Ref\_t:

#### Public Attributes

- unsigned short [BoardNr](#)  
*The board location the board sits in.*
- unsigned short [PortNr](#)  
*The physical port.*

#### 10.212.1 Detailed Description

General location of a physical or virtual port.

is used to identify a physical port, unless it is explicitly noted otherwise.

Definition at line 394 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.213 DCM::DeviceControl::IPS\_ReferenceTS\_t Struct Reference

Structure to find a specific TS by IP-address and UDP port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_ReferenceTS\_t:

### Public Attributes

- [IPS\\_LookupTS\\_t](#) LookUpTS
- unsigned long Ref

#### 10.213.1 Detailed Description

Structure to find a specific TS by IP-address and UDP port.

Definition at line 2541 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.214 DCM::DeviceControl::IPS\_RefPid\_t Struct Reference

Note RefPid\_t is effectively a copy of [InEMM\\_Ref\\_t](#) but that must remain for compatability.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_RefPid\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)  
*The location (slot, port) and stream.*
- unsigned short [Pid](#)  
*Value of the PID.*

#### 10.214.1 Detailed Description

Note RefPid\_t is effectively a copy of [InEMM\\_Ref\\_t](#) but that must remain for compatability.

Definition at line 2812 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.215 DCM::DeviceControl::IPS\_RefSvc\_t Struct Reference

A reference to a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_RefSvc\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefOut](#)  
*RefTS of the service TS, not necessarily an output TS as the name wrongly suggests.*
- unsigned long [SvcIdent](#)  
*For the moment this value equals the service ID.*

### 10.215.1 Detailed Description

A reference to a service.

Definition at line 4903 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.216 DCM::DeviceControl::IPS\_RefTS\_t Struct Reference

General location of a TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_RefTS\_t:

### Public Attributes

- [IPS\\_Ref\\_t PhysRef](#)  
*See [IPS\\_Ref\\_t](#).*
- unsigned long [Ref](#)  
*This is the TS index.*

#### 10.216.1 Detailed Description

General location of a TS.

Definition at line 420 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.217 DCM::DeviceControl::IPS\_SDT\_Data\_t Struct Reference

Structure that contains data about the Service Description Table of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_SDT\_Data\_t:

## Public Attributes

- boolean [InputSDTPresent](#)  
*RO flag.*
- boolean [OutputSDTPresent](#)  
*RW flag. false = Follow Input; true = Override.*
- boolean [EITscheduleIn](#)  
*RO provides EIT\_schedule\_flag of input (Present = 1)*
- [eEitSchedule](#) [EITschOut](#)  
*RW (Transparent, Schedule Present, Schedule Not Present)*
- boolean [EITpresFollowIn](#)  
*RO provides EIT\_present\_following flag of input (Present = 1)*
- [eEitPresentFollow](#) [EITpfOut](#)  
*RW (Transparent, Sch. PF Present, Sch. PF Not Present)*
- boolean [FreeCAmode](#)  
*RO provides free\_CA\_mode of input (Scrambled = 1)*
- [eCaMode](#) [CAmodeOut](#)  
*RW (Transparent, Not Scrambled, CA Present)*
- [eRunningStatus](#) [RunStatusIn](#)  
*RO provides running status of input.*
- [eRunningStatus](#) [RunStatusOut](#)

- RW (Transparent or configurable status)*
- [eServiceType ServiceTypeIn](#)  
*RO provides service type of input.*
- [eServiceType ServiceTypeOut](#)  
*RW (Transparent or configurable)*
- [boolean UseOutputUserName](#)  
*User forced change of output service name.*
- [DvbString\\_t OutputUserName](#)  
*Maximum string length 255 characters.*
- [boolean UseOutputServiceProviderName](#)  
*User forced change of output service provider name.*
- [DvbString\\_t ServiceProviderNameIn](#)
- [DvbString\\_t ServiceProviderNameOut](#)

#### 10.217.1 Detailed Description

Structure that contains data about the Service Description Table of a service.

Definition at line 4847 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.218 DCM::DeviceControl::IPS\_Serv\_Dest\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_Serv\_Dest\_t:

#### Public Attributes

- [IPS\\_Service\\_t OutputService](#)
- [IPS\\_Serv\\_Source\\_List\\_t SourceList](#)

#### 10.218.1 Detailed Description

Definition at line 5403 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.219 DCM::DeviceControl::IPS\_Service\_In\_t Struct Reference

Incoming service information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_Service\_In\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)
- [ServiceId\\_t InputSID](#)
- unsigned long [ServiceInProperty](#)  
*Read only Bitmap used by GUI to display specific icons (.*
- [DvbString\\_t SystemName](#)  
*Maximum string length 255 characters.*
- [DvbString\\_t UserName](#)  
*Maximum string length 255 characters.*
- [eEsTypeStandard m\\_EsTypeStandard](#)  
*The standard of the input TS.*

### 10.219.1 Detailed Description

Incoming service information.

Definition at line 4740 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.220 DCM::DeviceControl::IPS\_Service\_In\_V2\_t Struct Reference

A definition of an input service as used on the output.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_Service\_In\_V2\_t:

### Public Attributes

- [IPS\\_Service\\_t Service](#)
- [DvbString\\_t Name](#)

*Read only: The name of the service.*

### 10.220.1 Detailed Description

A definition of an input service as used on the output.

Definition at line 4916 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.221 DCM::DeviceControl::IPS\_Service\_t Struct Reference

SID reference.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_Service\_t:

### Public Attributes

- [IPS\\_RefTS\\_t Ref](#)  
*Identifies the unique location (Board, Port, TS).*
- [ServiceId\\_t SID](#)  
*SID range: 0..65535.*

### 10.221.1 Detailed Description

SID reference.

Definition at line 4703 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.222 DCM::DeviceControl::IPS\_ServiceData\_Out\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_ServiceData\_Out\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefOut](#)
- [ServiceId\\_t OutputSID](#)  
*ID of an outgoing service.*
- unsigned long [ServiceOutProperty](#)  
*Read only Bitmap used by GUI to display specific icons (.*
- boolean [FixedRemap](#)  
*User forced change of output service ID.*
- boolean [HDSERVICE](#)  
*Read/Write: Holds true if service is High definition service false for Standard definition service.*
- boolean [DVB\\_ScramblingLicense](#)  
*Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license false if no license.*
- [IPS\\_SDT\\_Data\\_t SDTData](#)
- [IPS\\_Service\\_In\\_t Service](#)  
*Reference to the incoming service.*

## 10.222.1 Detailed Description

Definition at line 4870 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.223 DCM::DeviceControl::IPS\_ServiceData\_Out\_V2\_t Struct Reference

Extended information about an output service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_ServiceData\_Out\_V2.t:

## Public Attributes

- **IPS\_RefSvc\_t ServiceOut**  
*Identifies the output service.*
- **ServiceId\_t NewOutputSID**  
*Requested Service ID for an outgoing service.*
- unsigned long **ServiceOutProperty**  
*Read only Bitmap used by GUI to display specific icons < Bit 0: Service present at input (true) or not (false). < Bit 1: Service scrambled by DCM (true means scrambled) < Bit 2: Service Active (Session Based) < Bit 3: Service is merged < Bit 4: at least one of the source input PIDs of this service is scrambled < Bit 5: True if output service is in backup < Bit 6: True if output service loss is active < Bit 7: True if output service is streaming < Bit 8: True if Service Redundancy Alarm is active < Other bits for future use.*
- boolean **FixedRemap**  
*User forced change of output service ID.*
- boolean **HDSERVICE**  
*Read/Write: Holds true if service is High definition service false for Standard definition service.*
- boolean **DVB\_ScramblingLicense**  
*Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license; false if no license.*
- **IPS\_SDT\_Data\_t SDTData**
- **IPS\_Service\_In\_V2\_t MainInputService**  
*Read only : Reference to the main input service that was used to create the output service.*
- **IPS\_Service\_In\_V2\_t ActiveInputService**  
*Read only : can be different from main input service e.g. when service is in backup, ...*

### 10.223.1 Detailed Description

Extended information about an output service.

Definition at line 4924 of file DCM.idl.

The documentation for this struct was generated from the following file:

- DCM.idl

## 10.224 DCM::DeviceControl::IPS\_ServiceData\_Out\_V3\_t Struct Reference

Extended information about an output service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_ServiceData\_Out\_V3.t:

## Public Attributes

- **IPS\_RefSvc\_t ServiceOut**  
*Identifies the output service.*
- **ServiceId\_t NewOutputSID**  
*Requested Service ID for an outgoing service.*
- unsigned long **ServiceOutProperty**  
*Read only Bitmap used by GUI to display specific icons < Bit 0: Service present at input (true) or not (false). < Bit 1: Service scrambled by DCM (true means scrambled) < Bit 2: Service Active (Session Based) < Bit 3: Service is merged < Bit 4: at least one of the source input PIDs of this service is scrambled < Bit 5: True if output service is in backup < Bit 6: True if output service loss is active < Bit 7: True if output service is streaming < Bit 8: True if Service Redundancy Alarm is active < Other bits for future use.*
- boolean **FixedRemap**  
*User forced change of output service ID.*
- boolean **HDSERVICE**  
*Read/Write: Holds true if service is High definition service false for Standard definition service.*
- boolean **DVB\_ScramblingLicense**  
*Read/Write: Holds true if service wants/has DVB\_SCRAMBLING license; false if no license.*
- **IPS\_SDT\_Data\_t SDTData**
- **IPS\_Service\_In\_V2\_t MainInputService**  
*Read only : Reference to the main input service that was used to create the output service.*
- **IPS\_Service\_In\_V2\_t ActiveInputService**  
*Read only : can be different from main input service e.g. when service is in backup, ...*
- **AlternateSrcId\_t ActiveSourceId**  
*Read only: the source ID of the currently active alternate source.*

### 10.224.1 Detailed Description

Extended information about an output service.

Definition at line 4955 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.225 DCM::DeviceControl::IPS\_UDP\_Socket\_t Struct Reference

The socket describes the IP address & UDP port on which a TS is played out.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPS\_UDP\_Socket\_t:

### Public Attributes

- string [IP](#)
- unsigned short [Port](#)

*Recommended UDP Port range: 1024 (0X400) .. 65535 (0xFFFF).*

### 10.225.1 Detailed Description

The socket describes the IP address & UDP port on which a TS is played out.

Definition at line 2310 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.226 DCM::DeviceControl::IPSecHost Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IPSecHost:

#### Public Attributes

- string [PeerIPAddress](#)  
*The IP address of the IPsec capable host.*
- string [PreSharedKey](#)  
*The preshard key used for setting up IPsec.*

#### 10.226.1 Detailed Description

Definition at line 24449 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.227 DCM::DeviceControl::IpServiceDisplayData Struct Reference

Description of an active or listening port.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::IpServiceDisplayData:

## Public Attributes

- [enPSBSocketType](#) [SckType](#)  
*Tcp, udp, tcp6, udp6, ...*
- [string](#) [ItfName](#)  
*Interface of listening port, or 'all'.*
- [string](#) [LocalIp](#)  
*IP address of local itf or 0.0.0.0 (any)*
- [string](#) [Remotelp](#)  
*Remote IP address or 0.0.0.0 (any)*
- [unsigned short](#) [LocalPort](#)  
*Port number of listening port.*
- [unsigned short](#) [RemotePort](#)  
*0 or port number in case of established connection*
- [string](#) [ProtoName](#)  
*Name of application level protocol if meaningful one exists, e.g. ssh.*
- [string](#) [ProcessName](#)  
*Name of process that has opened the port.*
- [string](#) [Description](#)  
*Usage description and features that are related.*
- [unsigned long](#) [IpSvcProperty](#)  
*Bitmap:*

### 10.227.1 Detailed Description

Description of an active or listening port.

Definition at line 24638 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.228 DCM::DeviceControl::JclInitialValue\_t Struct Reference

JCL initial value for Hitachi.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::JclInitialValue\_t:

### Public Attributes

- unsigned long [Part1](#)
- unsigned long [Part2](#)

### 10.228.1 Detailed Description

JCL initial value for Hitachi.

Definition at line 24691 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.229 DCM::DeviceControl::JclSystemId\_t Struct Reference

JCL system ID for Hitachi.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::JclSystemId\_t:

#### Public Attributes

- unsigned long [Part1](#)
- unsigned long [Part2](#)
- unsigned long [Part3](#)
- unsigned long [Part4](#)
- unsigned long [Part5](#)
- unsigned long [Part6](#)
- unsigned long [Part7](#)
- unsigned long [Part8](#)

#### 10.229.1 Detailed Description

JCL system ID for Hitachi.

Definition at line 24698 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.230 DCM::DeviceControl::LicenseValidation\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::LicenseValidation\_t:

#### Public Attributes

- string [Version](#)  
*Version of the licenses.*
- string [ValidationKey](#)  
*Validation Key.*

#### 10.230.1 Detailed Description

Definition at line 20614 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.231 DCM::DeviceControl::LogoCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::LogoCfg\_t:

### Public Attributes

- [LogoCfgID\\_t LogoCfgID](#)  
*unique logo configuration identifier (must be 0 when adding a new logo configuration)*
- [string LogoCfgName](#)  
*logo configuration name, maximum 64 characters*
- [unsigned short X\\_Position](#)  
*X position in pixels (range [0, 1920[), left is 0.*
- [unsigned short Y\\_Position](#)  
*Y position in pixels (range [0, 1080[), top is 0.*
- [unsigned short Opacity](#)  
*10 \* opacity in % and in steps of .5 % (e.g. Opacity = 105 means 10.5 %), < 100% opaque means not transparent at all.*
- [boolean DefaultShow](#)  
*True if the logo should be displayed by default.*
- [unsigned short FadeIn](#)  
*in frames, max 300 frames, 0 is instant display*
- [unsigned short FadeOut](#)  
*in frames, max 300 frames, 0 is instant removal*
- [boolean AnimatedLogo](#)  
*False: static logo, true: animated logo.*
- [enLogoPlayoutMode\\_t enPlayoutMode](#)  
*Playout mode for animated logos.*
- [unsigned short LoopCount](#)  
*Number of times an animated logo should be displayed: loop count of 0 means animation is played continuously, loop count of 3 means animation is played three times.*
- [boolean RemoteLogo](#)  
*Is the logo locally or remotely stored.*
- [string UriRemoteLogo](#)  
*URL to remote logo.*
- [unsigned long LogoProperty](#)  
*Read only Bitmap.*

### 10.231.1 Detailed Description

Definition at line 13808 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.232 DCM::DeviceControl::LogoCfgFileNumber\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::LogoCfgFileNumber\_t:

### Public Attributes

- [LogoCfgID\\_t](#) `LogoCfgID`
- [LogoFileNumber\\_t](#) `LogoFileNumber`

### 10.232.1 Detailed Description

Definition at line 13855 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.233 DCM::DeviceControl::MaximumLogoSize\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MaximumLogoSize\_t:

#### Public Attributes

- unsigned short [MaxLogoWidth](#)
- unsigned short [MaxLogoHeight](#)  
*Maximum logo width in pixels, 0 means unlimited.*

#### 10.233.1 Detailed Description

Definition at line 13847 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.234 DCM::DeviceControl::MergeCriterium\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MergeCriterium\_t:

### Public Attributes

- [TrackingCriterium\\_t TrackingCriterium](#)
- [IPS\\_RefPidList\\_t MergedComponents](#)

*a list of [IPS\\_RefPid\\_t](#)'s of components merged in by this TrackingCriterium*

### 10.234.1 Detailed Description

Definition at line 5059 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.235 DCM::DeviceControl::MergedESDescriptorData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MergedESDescriptorData\_t:

### Public Attributes

- unsigned short [OutputSid](#)
- [IPS\\_RefPid\\_t](#) [MergedES\\_InputPid](#)
- long [ID](#)
- string [UserName](#)
- octet [Tag](#)
- [ByteStream](#) [DescriptorData](#)

#### 10.235.1 Detailed Description

Definition at line 8025 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.236 DCM::DeviceControl::MessageBufferInfo Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MessageBufferInfo:

#### Public Attributes

- unsigned short [OldestSeqNumber](#)  
*Oldest Message in the Buffer.*
- unsigned short [MostRecentSeqNumber](#)  
*Most Recent Message in the Buffer.*
- unsigned short [MaxSeqNumber](#)  
*Maximum allowed sequence Numbers.*
- unsigned short [SizeOfBuffer](#)

#### 10.236.1 Detailed Description

Definition at line 22361 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.237 DCM::DCM\_Notifications::Messages Struct Reference

Notification sent by MB when a new message is available (alarms)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::Messages:

#### Public Attributes

- unsigned long [MainID](#)
- unsigned long [BoardNr](#)
- unsigned long [PortNr](#)
- unsigned long [Ref](#)
- unsigned long [SubID1](#)
- unsigned long [SubID2](#)
- unsigned long [MessageNumber](#)

#### 10.237.1 Detailed Description

Notification sent by MB when a new message is available (alarms)

Definition at line 32233 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

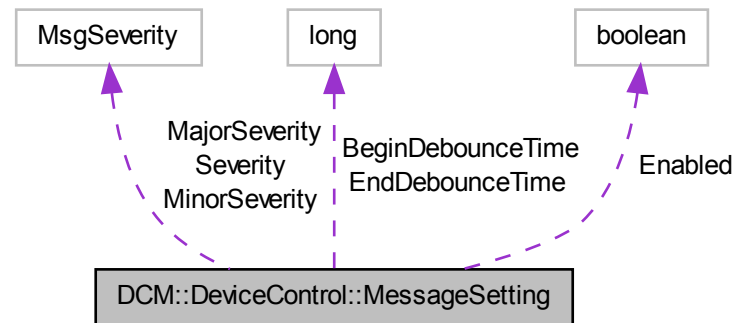

## 10.238 DCM::DeviceControl::MessageSetting Struct Reference

Message settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MessageSetting:

#### Public Attributes

- boolean [Enabled](#)  
*enable/disabling of individual messages.*
- [MsgSeverity](#) [Severity](#)  
*will be used for the binary messages.*
- [MsgSeverity](#) [MinorSeverity](#)  
*will be used for the analog messages.*
- [MsgSeverity](#) [MajorSeverity](#)  
*will be used for the analog messages.*
- unsigned long [BeginDebounceTime](#)  
*debouncing time when the alarm begins, switches from non-active to active.*
- unsigned long [EndDebounceTime](#)  
*debouncing time when the alarm ends, switches from active to non-active.*

#### 10.238.1 Detailed Description

Message settings.

Definition at line 22445 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.239 DCM::DeviceControl::MFPB\_AAC\_AudioSettings\_t Struct Reference

AAC audio processing settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AAC\_AudioSettings\_t:

### Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Identifies the elementary streams encoder where the setting should be added to.*
- [enMFPB\\_AAC\\_TransportPacketMode\\_t enTransportPacketizationMode](#)  
*Bit stream mode, [MPEG-4 LATM/LOAS by default].*
- [enMFPB\\_AAC\\_AdvancedEncodingTools enAdvancedEncodingTools](#)  
*enAdvancedEncodingTools is constrained by:*
- boolean [bLfeChannelEnable](#)  
*LFE Channel Enable default true.*

### 10.239.1 Detailed Description

AAC audio processing settings.

#### Version

Release 10.0

Definition at line 11951 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.240 DCM::DeviceControl::MFPB\_AacAudioCfg\_t Struct Reference

Configuration settings for the AAC audio settings of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AacAudioCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_AAC\\_AudioSettingsList\\_t AAC\\_AudioSettingsList](#)

*AAC Audio settings per ES.*

### 10.240.1 Detailed Description

Configuration settings for the AAC audio settings of a service.

Definition at line 11983 of file DCM.idl.

The documentation for this struct was generated from the following file:

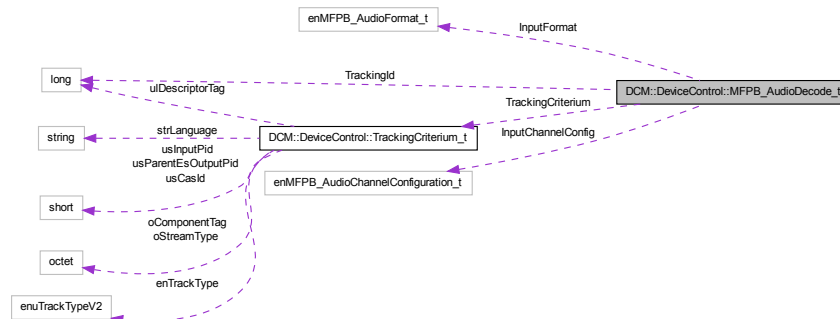

- [DCM.idl](#)

### 10.241 DCM::DeviceControl::MFPB\_AudioDecode\_t Struct Reference

Audio decode settings together with fields identifying the Audio component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecode\_t:

### Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*0 when creating a new entry*
- [TrackingCriterium\\_t TrackingCriterium](#)
- [enMFPB\\_AudioFormat\\_t InputFormat](#)  
*Format of the input.*
- [enMFPB\\_AudioChannelConfiguration\\_t InputChannelConfig](#)  
*Input channel configuration.*

#### 10.241.1 Detailed Description

Audio decode settings together with fields identifying the Audio component they're for.

#### Version

Release 10.0

Definition at line 11653 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.242 DCM::DeviceControl::MFPB\_AudioDecodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeCfg\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_AudioDecodeList\\_t AudioDecodeList](#)

#### 10.242.1 Detailed Description

Definition at line 11667 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.243 DCM::DeviceControl::MFPB\_AudioDecodeExtraAACCfg\_t Struct Reference

Configuration for extra AAC decoder settings per service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraAACfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_AudioDecodeExtraAACSettingsList\\_t AudioDecodeExtraAACSettingsList](#)

*Extra AAC decoder settings per ES.*

### 10.243.1 Detailed Description

Configuration for extra AAC decoder settings per service.

### Version

Release 10.10

Definition at line 12470 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.244 DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t Struct Reference

Extra AAC decoder settings per audio ES.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraAACSettings\_t:

### Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Identifies the elementary streams encoder where the setting should be added to (.*
- [enMFPB\\_Downmix\\_ToStereo en5\\_1ToStereo](#)  
*Select channels to keep when converting to stereo. Allowed values are LTRT and [LORO default].*
- boolean [bIsCenterCoefficient](#)  
*Center Coefficient Present Yes(true)/[No default].*
- long [ICenterCoefficient](#)  
*Center Coefficient TODO: range and default.*
- boolean [bIsSurroundCoefficient](#)  
*Surround Coefficient Present Yes(true)/[No default].*
- long [ISurroundCoefficient](#)  
*Surround Coefficient TODO range and default.*

#### 10.244.1 Detailed Description

Extra AAC decoder settings per audio ES.

#### Version

Release 10.10

Definition at line 12452 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.245 DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbyCfg\_t Struct Reference

Configuration for extra Dolby decoder settings per service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbyCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_AudioDecodeExtraDolbySettingsList\\_t AudioDecodeExtraDolbySettingsList](#)

*Extra Dolby decoder settings per ES.*

### 10.245.1 Detailed Description

Configuration for extra Dolby decoder settings per service.

### Version

Release 10.10

Definition at line 12562 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.246 DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t Struct Reference

Extra Dolby decoder settings per audio ES.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraDolbySettings\_t:

## Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
Identifies the elementary streams encoder where the setting should be added to (.
- [enMFPB\\_Downmix\\_ToMono enDualMonoToMono](#)  
Select how to convert dual mono channels to mono. [Left by default].
- unsigned short [Pid](#)  
For Future functionality. The new PID value for the extra right channel. Only used when enDualMonoToMono is split.
- [enMFPB\\_Downmix\\_ToStereo en5\\_1ToStereo](#)  
Select channels to keep when converting to stereo. Allowed values are LTRT, [LORO default] and auto.
- [enMFPB\\_DolbyDec\\_DynComp enDynCompMode](#)  
Dynamic Compression Mode [Line by default].
- unsigned short [uCompressionCut10](#)  
Compression Cut times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in custom Dynamic Compression Mode, else ignored and set to 10 or 0 in case of DynComp\_None.
- unsigned short [uCompressionBoost10](#)  
Compression Boost times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in custom Dynamic Compression Mode, else ignored and set to 10 or 0 in case of DynComp\_None.
- unsigned short [uCompressionScalingFactor10](#)  
For Future functionality. Compression Scaling factor times 10 (eg. value 9 will be 0.9 in the GUI). Range [0,10 default]. Only used in line and custom Dynamic Compression Mode.
- boolean [bErrorConcealment](#)  
Error Concealment: [On default]/Off(false)

### 10.246.1 Detailed Description

Extra Dolby decoder settings per audio ES.

## Version

Release 10.10

Definition at line 12536 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.247 DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Cfg\_t Struct Reference

Configuration for extra MPEG1-L2 decoder settings per service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Cfg\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_AudioDecodeExtraMPEGL2SettingsList\\_t AudioDecodeExtraMPEGL2SettingsList](#)

*Extra decoder settings per ES.*

### 10.247.1 Detailed Description

Configuration for extra MPEG1-L2 decoder settings per service.

## Version

Release 10.0

Definition at line 12402 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.248 DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Settings\_t Struct Reference

Extra MPEG1-L2 decoder settings per audio ES.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioDecodeExtraMPEGL2Settings\_t:

### Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Identifies the elementary streams encoder where the setting should be added to (.*
- [enMFPB\\_Downmix\\_ToMono enDualMonoToMono](#)  
*Select how to convert dual mono channels to mono. [Left by default].*
- unsigned short [Pid](#)  
*For Future functionality. The new PID value for the extra right channel. Only used when enDualMonoToMono is split.*

### 10.248.1 Detailed Description

Extra MPEG1-L2 decoder settings per audio ES.

### Version

Release 10.0

Definition at line 12387 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.249 DCM::DeviceControl::MFPB\_AudioEncode\_t Struct Reference

Audio encode settings together with field identifying the Audio component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_AudioEncode\_t:

## Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Must be equal to the tracking ID of a Audio decode.*
- [MFPB\\_AudioEncodeSettings\\_t Settings](#)

## 10.249.1 Detailed Description

Audio encode settings together with field identifying the Audio component they're for.

## Version

Release 10.0

Definition at line 11785 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.250 DCM::DeviceControl::MFPB\_AudioEncodeCfg\_t Struct Reference

```

MPEG1-L2 audio processing settings.

#### Version

Release 10.10

Definition at line 11862 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.268 DCM::DeviceControl::MFPB\_MPEGL2AudioCfg\_t Struct Reference

Configuration settings for the MPEG1-L2 audio settings of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_MPEGL2AudioCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_MPEGL2\\_AudioSettingsList\\_t MPEGL2\\_AudioSettingsList](#)

*MPEG1-L2 Audio settings per ES.*

### 10.268.1 Detailed Description

Configuration settings for the MPEG1-L2 audio settings of a service.

Definition at line 11871 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.269 DCM::DeviceControl::MFPB\_MultiResABR\_t Struct Reference

Note: it is required that FragmentLength and SegmentLength are a multiple of one another.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_MultiResABR\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)  
*Main MFP service reference.*
- boolean [FragmentsEnabled](#)  
*Enable ABR syncing via Fragments.*
- boolean [SegmentsEnabled](#)  
*Enable ABR syncing via Segments.*
- unsigned long [FragmentLength](#)  
*Fragment length in seconds (range: 1 to 60s)*
- unsigned long [SegmentLength](#)  
*Segment length in seconds (range: 1 to 60)*

## 10.269.1 Detailed Description

Note: it is required that FragmentLength and SegmentLength are a multiple of one another.

Definition at line 11049 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.270 DCM::DeviceControl::MFPB\_MultiResVideoEncode\_t Struct Reference

MultiRes video encode settings together with field identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_MultiResVideoEncode\_t:

## Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Must be equal to the tracking ID of a video decode.*
- [MFPB\\_MultiResVideoEncodeSettings\\_t Settings](#)

## 10.270.1 Detailed Description

MultiRes video encode settings together with field identifying the video component they're for.

## Version

Release 11.10

Definition at line 11369 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.271 DCM::DeviceControl::MFPB\_MultiResVideoEncodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_MultiResVideoEncodeCfg\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t Service](#)  
*MultRes service reference.*
- [MFPB\\_MultiResVideoEncodeList\\_t VideoEncodeList](#)

## 10.271.1 Detailed Description

Definition at line 11376 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.272 DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t Struct Reference

MultiResolution Video encode settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_MultiResVideoEncodeSettings\_t:

## Public Attributes

- [enMFPB\\_BitrateMode](#) [enBitrateMode](#)  
*Choose between CBR and Capped VBR.*
- unsigned long [uCustomVertResolution](#)  
*Range: [1080-96] Multiple of 16 or one of (1080,720,600,576,544,480,360,320,288,272,240,224,180,160)*
- unsigned long [uCustomHorizResolution](#)  
*Range: [1920-96] Multiple of 16 or one of (1920,1440,1280,1080,960,800,720,640,544,528,480,400,352,320,240,208,176,160,128)*
- [enMFPB\\_MR\\_FrameRate\\_t](#) [enMFPB\\_FrameRate](#)
- [enMFPB\\_Profile\\_t](#) [enMFPB\\_Profile](#)
- [enMFPB\\_Level\\_t](#) [enLevel](#)
- [enMFPB\\_EntropyEncoding\\_t](#) [enEntropyEncoding](#)
- unsigned long [Bitrate](#)  
*(kbps) Range: 300 kbps-64 Mbps*
- [enMFPB\\_GopStructure\\_t](#) [enMFPB\\_GopStructure](#)  
*The mode of the GOP structure (Follow input and keep closed GOP not allowed)*
- boolean [bHierarchical](#)  
*AVC only. Hierarchical layered structure, default disabled.*
- unsigned short [GopBPictures](#)  
*Amount of B pictures. Range 0 to 5, default 2. 0 means IPP.*
- unsigned short [GopSize](#)  
*Number of I coded frames per gop. Range: 1..600, default 15, 1 means no B or P frames.*
- unsigned long [AVC IDR Interval](#)  
*Not used for the moment.*

- [enMFPB\\_ClosedCaptions\\_t enClosedCaptions](#)

*Disable, auto.*

### 10.272.1 Detailed Description

MultiResolution Video encode settings.

#### Version

Release 11.10

Definition at line 11345 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.273 DCM::DeviceControl::MFPB\_ServiceCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_ServiceCfg\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [RefProcessorEngineUnit\\_t RefEngineUnit](#)  
*The processor engine handling this service (engine nr == 0xFFFE can be used to delay services)*
- [enMFPB\\_SlotType\\_t enMFPB\\_SlotType](#)  
*The slot type a service belongs to.*
- unsigned long [Delay](#)  
*For 500 - 5000 ms (Total delay), in ms. 4000 by default. The value is only used if engine nr == 0xFFFE, else the engine end to end delay is used.*
- unsigned long [PCRInterval](#)  
*10 - 100 ms, in ms. 37 by default.*
- boolean [PCRInVideo](#)  
*Reserved for future use: Should the PCR be part of a video packet or should it use an empty packet (on the same PID).*
- [enMFPB\\_AdaptSI\\_t AdaptSI\\_Tables](#)  
*Default Adapt SI using DVB : will automatically adapt PMT, EIT and SDT content where necessary.*
- [enMFPB\\_MaxBitrateDescrMode\\_t enMaxBitrateDescriptorMode](#)

## 10.273.1 Detailed Description

Definition at line 10419 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.274 DCM::DeviceControl::MFPB\_ServiceComponents\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_ServiceComponents\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_ComponentList\\_t VideoComponents](#)  
The video pids which can be processed.
- [MFPB\\_ComponentList\\_t AudioComponents](#)  
The audio pids which can be processed.

## 10.274.1 Detailed Description

Definition at line 10564 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.275 DCM::DeviceControl::MFPB\_ServiceDD\_MetaDecStatus\_t Struct Reference

Dolby meta data status on the decoder side for a specific service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_ServiceDD\_MetaDecStatus\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_DD\\_MetaDecStatusList\\_t DD\\_MetaDecStatusL](#)

## 10.275.1 Detailed Description

Dolby meta data status on the decoder side for a specific service.

**Version**

Release 10.20

Definition at line 12720 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.276 DCM::DeviceControl::MFPB\_ServiceMetaDataCfg\_t Struct Reference**

audio meta data settings for a specific service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_ServiceMetaDataCfg\_t:

**Public Attributes**

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_MetaDataCfgList\\_t MetaDataCfgL](#)

**10.276.1 Detailed Description**

audio meta data settings for a specific service.

**Version**

Release 10.20

Definition at line 12775 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.277 DCM::DeviceControl::MFPB\_ServiceTrackingID\_t Struct Reference**

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_ServiceTrackingID\_t:

**Public Attributes**

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_TrackingID\\_t TrackingID](#)

**10.277.1 Detailed Description**

Definition at line 10550 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.278 DCM::DeviceControl::MFPB\_Svc\_CaptionInfo\_t Struct Reference

Configuration settings for the Caption Service Descriptor(s) of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_Svc\_CaptionInfo\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_ES\\_CaptionInfoList\\_t ES\\_CaptionInfoList](#)

#### 10.278.1 Detailed Description

Configuration settings for the Caption Service Descriptor(s) of a service.

Definition at line 12624 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.279 DCM::DeviceControl::MFPB\_VideoDecode\_t Struct Reference

Video decode settings together with fields identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoDecode\_t:

## Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*0 when creating a new entry*
- [TrackingCriterium\\_t TrackingCriterium](#)

## 10.279.1 Detailed Description

Video decode settings together with fields identifying the video component they're for.

## Version

Release 10.0

Definition at line 10678 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.280 DCM::DeviceControl::MFPB\_VideoDecodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoDecodeCfg\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_VideoDecodeList\\_t VideoDecodeList](#)

#### 10.280.1 Detailed Description

Definition at line 10685 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.281 DCM::DeviceControl::MFPB\_VideoEncode\_t Struct Reference

Video encode settings together with field identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoEncode\_t:

## Public Attributes

- [MFPB\\_TrackingID\\_t TrackingId](#)  
*Must be equal to the tracking ID of a video decode.*
- [MFPB\\_VideoEncodeSettings\\_t Settings](#)

### 10.281.1 Detailed Description

Video encode settings together with field identifying the video component they're for.

## Version

Release 10.0

Definition at line 11034 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.282 DCM::DeviceControl::MFPB\_VideoEncodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoEncodeCfg\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_VideoEncodeList\\_t VideoEncodeList](#)

#### 10.282.1 Detailed Description

Definition at line 11041 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.283 DCM::DeviceControl::MFPB\_VideoEncodeCfgV2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoEncodeCfgV2\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [MFPB\\_VideoEncodeV2List\\_t VideoEncodeList](#)

### 10.283.1 Detailed Description

Definition at line 11216 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.284 DCM::DeviceControl::MFPB\_VideoEncoderTemplate\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoEncoderTemplate\_t:

## Public Attributes

- [enMFPB\\_VertResolution\\_t enMFPB\\_VertResolution](#)  
*Vertical Resolution.*
- [unsigned long uCustomVertResolution](#)  
*Future usage: Custom vertical resolution only used if enMFPB\_VertResolution is.*
- [enMFPB\\_HorizResolution\\_t enMFPB\\_HorizResolution](#)  
*Horizontal Resolution.*
- [unsigned long uCustomHorizResolution](#)  
*Future usage: Custom horizontal resolution only used if enMFPB\_HorizResolution is.*
- [enMFPB\\_FrameRate\\_t enMFPB\\_FrameRate](#)  
*Frame rate.*
- [enMFPB\\_FrameRateReduction\\_t enMFPB\\_FrameRateReduction](#)  
*Frame rate reduction, Reserved for future use.*
- [enMFPB\\_Profile\\_t enMFPB\\_Profile](#)  
*Profile: see enMFPB\_Profile\_t for Mpeg2/Avc, transrate/transcode, SD/HD defaults and constraints.*
- [unsigned long Bitrate](#)  
*Bitrate in bps The meaning of the bitrate depends on the enBitrateMode (.*

### 10.284.1 Detailed Description

Definition at line 10937 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.285 DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t Struct Reference

Video encode settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MFPB\_VideoEncodeSettings\_t:

## Public Attributes

- [enMFPB\\_VideoEncodingMode\\_t](#) [enVideoEncodingMode](#)  
*Processing mode TR/TC.*

### 10.298.1 Detailed Description

Structure to pass Messages from the device to whatever client.

Definition at line 22308 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.299 DCM::DeviceControl::MM\_MessageSetting Struct Reference

Measurement message settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MM\_MessageSetting:

### Public Attributes

- [MM\\_ID\\_t](#) MsgID
- [MessageSetting](#) MsgSetting

### 10.299.1 Detailed Description

Measurement message settings.

Definition at line 22464 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.300 DCM::DeviceControl::MM\_MessageTypeErrorInterval Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MM\_MessageTypeErrorInterval:

#### Public Attributes

- [IPS\\_Ref\\_t](#) [RefPhys](#)  
*mask port, port info not relevant*
- [eMessage](#) [Message](#)  
*message type to set interval for*
- long [Interval](#)  
*Interval in ms. Value must be between 0-46600 (incl boundaries). NB: MAX\_PID\_ERROR\_TIMEOUT = 45000.*

#### 10.300.1 Detailed Description

Definition at line 22845 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.301 DCM::DeviceControl::MM\_MessageTypeSetting Struct Reference

Message type settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MM\_MessageTypeSetting:

### Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)  
*mask port, port info not relevant*
- unsigned short [MsgTypeID](#)
- [MessageSetting MsgSetting](#)

#### 10.301.1 Detailed Description

Message type settings.

Definition at line 22456 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.302 DCM::DeviceControl::MM\_TypeInfo Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MM\_TypeInfo:

**Public Attributes**

- unsigned short [MeasureTypeID](#)
- string [Name](#)
- string [Unit](#)
- [MeasureType](#) Type
- [DeviceLevel](#) Level
- [MM\\_ID\\_Category](#) ID\_Cat

**10.302.1 Detailed Description**

Definition at line 22598 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.303 DCM::DeviceControl::MM\_TypeInfo\_V2 Struct Reference**

V2 of [MM\\_TypeInfo](#): BackupTriggerMethod is added.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MM\_TypeInfo\_V2:

**Public Attributes**

- unsigned short [MeasureTypeID](#)
- string [Name](#)
- string [Unit](#)
- [MeasureType](#) Type
- [DeviceLevel](#) Level
- [MM\\_ID\\_Category](#) ID\_Cat
- octet [BackupTriggerMethod](#)

**10.303.1 Detailed Description**

V2 of [MM\\_TypeInfo](#): BackupTriggerMethod is added.

Definition at line 22615 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.304 DCM::DeviceControl::ModuleExceptionTrace\_t Struct Reference

Structure to get or set Debug Trace Level information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ModuleExceptionTrace\_t:

#### Public Attributes

- unsigned long [ModuleId](#)
- string [ModuleName](#)
- boolean [ExceptionTraceEnabled](#)

#### 10.304.1 Detailed Description

Structure to get or set Debug Trace Level information.

When setting the Debug Trace Levels the `ModuleName` is ignored.

Definition at line 1488 of file `DCM.idl`.

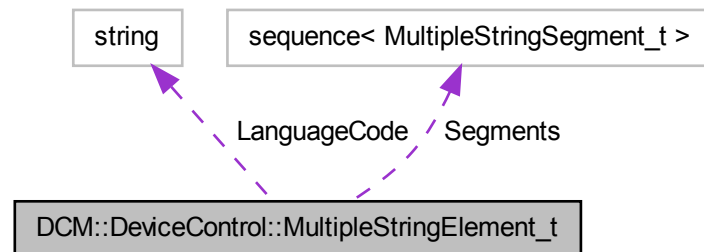

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.305 DCM::DeviceControl::MultipleStringElement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MultipleStringElement\_t:

#### Public Attributes

- `string` [LanguageCode](#)
- `sequence< MultipleStringSegment\_t >` [Segments](#)

#### 10.305.1 Detailed Description

Definition at line 8834 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.306 DCM::DeviceControl::MultipleStringSegment\_t Struct Reference

Multiple String: ATSC string representation.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::MultipleStringSegment\_t:

#### Public Attributes

- octet [CompressionType](#)
- octet [Mode](#)
- [ByteStream](#) Data

*String segment in UTF-8 format.*

#### 10.306.1 Detailed Description

Multiple String: ATSC string representation.

Actually, the string is passed in UTF-8 format for easy handling. The language code, compression type and mode are passed, so they can be changed.

Definition at line 8827 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.307 DCM::DeviceControl::NegotiatedGbePortSpeed\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NegotiatedGbePortSpeed\_t:

#### Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)  
*port identifier*
- [eNegotiatedGbePortSpeed\\_t ePortSpeed](#)

#### 10.307.1 Detailed Description

Definition at line 30859 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.308 DCM::DeviceControl::NicTeam\_MemberStatus\_t Struct Reference

Structure describing the status of a NIC team member.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NicTeam\_MemberStatus\_t:

#### Public Attributes

- [IPS\\_Ref\\_t](#) Port
- [eLinkStatus](#) Status
- unsigned long [FailureCount](#)

#### 10.308.1 Detailed Description

Structure describing the status of a NIC team member.

#### Version

Release 11.10

Definition at line 2202 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.309 DCM::DeviceControl::NicTeam\_Settings Struct Reference

Structure to get or set NIC team configuration.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NicTeam\_Settings:

### Public Attributes

- boolean [bNicTeam\\_Enabled](#)
- [eNicTeamMode](#) Mode
- [NicTeam\\_MemberList\\_t](#) MemberList
- unsigned long [UpDelay](#)
- unsigned long [DownDelay](#)

### 10.309.1 Detailed Description

Structure to get or set NIC team configuration.

### Version

Release 11.10

Definition at line 2188 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.310 DCM::DeviceControl::NicTeamStatus Struct Reference

Structure to get NIC team status.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NicTeamStatus:

#### Public Attributes

- [IPS\\_Ref\\_t ActivePort](#)
- [NicTeam\\_MemberStatusList\\_t MemberStatusList](#)

#### 10.310.1 Detailed Description

Structure to get NIC team status.

#### Version

Release 11.10

Definition at line 2218 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.311 DCM::DeviceControl::NotifData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NotifData\_t:

#### Public Attributes

- string [Name](#)
- unsigned long [Behaviour](#)  
*0: send buffered, 1: send directly*

#### 10.311.1 Detailed Description

Definition at line 955 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.312 DCM::DeviceControl::NTP\_Info\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NTP\_Info\_t:

#### Public Attributes

- string [IP](#)
- [NTP\\_Stats\\_t](#) Stats

#### 10.312.1 Detailed Description

Definition at line 704 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.313 DCM::DeviceControl::NTP\_Stats\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::NTP\_Stats\_t:

### Public Attributes

- [eNTP\\_TallyCodes TallyCode](#)
- string [RefID](#)  
*Reference Clock Identifier.*
- octet [Stratum](#)  
*Defines the distance to the reference clock.*
- [eNTP\\_RefClockTypes RefClockType](#)
- long [LastPoll](#)  
*Time that elapsed since last poll attempt.*
- long [PollInterval](#)  
*Current interval between poll attempts, in seconds.*
- string [Reachability](#)  
*Indicates the reachability status of the peer as an octal number.*
- double [Delay](#)  
*Indicates the roundtrip delay of the peer clock relative to the local clock over the network path between them, in seconds.*
- double [Offset](#)  
*Indicates the offset of the peer clock relative to the local clock, in seconds.*
- double [Jitter](#)  
*The estimated time error of the system clock measured as an exponential average of RMS time differences.*

#### 10.313.1 Detailed Description

Definition at line 690 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.314 DCM::DCM\_Notifications::Output\_SI\_TableChng Struct Reference

Notification sent when a Table is added (starts streaming) or changed.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::Output\_SI\_TableChng:

### Public Attributes

- unsigned long [TsRef\\_BoardNr](#)
- unsigned long [TsRef\\_PortNr](#)
- unsigned long [TsRef\\_Ref](#)
- unsigned long [TsRef\\_OnId](#)
- unsigned long [TsRef\\_TsId](#)
- unsigned long [TableKey\\_Id](#)
- unsigned long [TableKey\\_IdExt](#)  
*SID,.... Set to 0xFFFFFFFF when not used.*
- unsigned long [TableKey\\_OnId](#)  
*Set to 0xFFFFFFFF when not used.*
- unsigned long [TableKey\\_TsId](#)  
*Set to 0xFFFFFFFF when not used.*
- unsigned long [TableKey\\_Pid](#)  
*Always filled in. Only needed for AIT or tables on non-standard PID's.*

#### 10.314.1 Detailed Description

Notification sent when a Table is added (starts streaming) or changed.

Definition at line 32296 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.315 DCM::DCM\_Notifications::Output\_SI\_TableDel Struct Reference

Notification sent when a Table is deleted (stops streaming).

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::Output\_SI\_TableDel:

#### Public Attributes

- unsigned long [TsRef\\_BoardNr](#)
- unsigned long [TsRef\\_PortNr](#)
- unsigned long [TsRef\\_Ref](#)
- unsigned long [TsRef\\_OnId](#)
- unsigned long [TsRef\\_TsId](#)
- unsigned long [TableKey\\_Id](#)
- unsigned long [TableKey\\_IdExt](#)  
*SID,.... Set to 0xFFFFFFFF when not used.*
- unsigned long [TableKey\\_OnId](#)  
*Set to 0xFFFFFFFF when not used.*
- unsigned long [TableKey\\_TsId](#)

*Set to 0xFFFFFFFF when not used.*

- unsigned long [TableKey\\_Pid](#)

*Always filled in. Only needed for AIT or tables on non-standard PID's.*

### 10.315.1 Detailed Description

Notification sent when a Table is deleted (stops streaming).

Definition at line 32312 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.316 DCM::DCM\_Notifications::Output\_TS\_Change Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::Output\_TS\_Change:

### Public Attributes

- unsigned long [BoardNr](#)
- unsigned long [PortNr](#)
- unsigned long [Ref](#)
- unsigned long [OldOnId](#)
- unsigned long [NewOnId](#)
- unsigned long [OldTsId](#)

- unsigned long [NewTsId](#)
- unsigned long [ScrambleServicesAvailable](#)  
*when true, same as [DCM\\_TsIdOnIdChange](#)*

### 10.316.1 Detailed Description

#### Remarks

replaces [DCM\\_TsIdOnIdChange](#), but is also sent for TS'es without DVB\_SCRAMBLING licenses. Notification sent when a TS is added (created on [DCM](#)) or changed (TSID/ONID, scramble services).

Definition at line 32271 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.317 DCM::DCM\_Notifications::Output\_TS\_Delete Struct Reference

Notification sent when a TS is deleted (removed from [DCM](#)).

```
import "DCM.idl";
```

Collaboration diagram for DCM::DCM\_Notifications::Output\_TS\_Delete:

#### Public Attributes

- unsigned long [BoardNr](#)
- unsigned long [PortNr](#)
- unsigned long [Ref](#)
- unsigned long [OnId](#)
- unsigned long [TsId](#)

## 10.317.1 Detailed Description

Notification sent when a TS is deleted (removed from [DCM](#)).

Definition at line 32285 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.318 DCM::DeviceControl::OutputTsLossTriggerBitmapPerTs\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutputTsLossTriggerBitmapPerTs\_t:

## Public Attributes

- [IPS\\_RefTS\\_t TSRef](#)  
*TSRef of TS.*
- [OutputTsLossTriggerBitmap\\_t TriggerBitmap](#)  
*Trigger bitmap configuration for Output TS Loss.*

## 10.318.1 Detailed Description

Definition at line 32124 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.319 DCM::DeviceControl::OutputTsLossTriggerPerTs\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutputTsLossTriggerPerTs\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t TSRef](#)  
*TSRef of TS.*
- [OutputTsLossTrigger\\_t Trigger](#)  
*Trigger configuration for Output TS Loss.*

#### 10.319.1 Detailed Description

Definition at line 32058 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.320 DCM::DeviceControl::OutTS\_AlarmSetting\_t Struct Reference

Structure to pass payload and stuffing bitrate threshold alarm settings to one specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_AlarmSetting\_t:

### Public Attributes

- [IPS\\_RefTS\\_t OutTsRef](#)  
*Reference to the TS for which the settings are intended.*
- [BitrateAlarmSetting\\_t AlarmSetting](#)  
*The alarm settings themselves.*

#### 10.320.1 Detailed Description

Structure to pass payload and stuffing bitrate threshold alarm settings to one specific TS.

Definition at line 22995 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.321 DCM::DeviceControl::OutTS\_FEC\_Enc\_DefSetting\_t Struct Reference

Default FEC encoder settings (to be applied for new TS's)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_FEC\_Enc\_DefSetting\_t:

### Public Attributes

- [eFECEncMode Mode](#)  
*default value is FEC disabled*
- [eFECSendingArrangement SendingArrangement](#)  
*for 4.0 release, SendingArrangement must always be ePRO\_MPEG\_COP3\_ANNEX\_B*
- [eFECIncrScheme IncrScheme](#)  
*default value is increment UDP (eUDP\_OFFSET) (fixed for 4.0 release)*
- unsigned short [ColFecOffset](#)  
*default value column offset = 2 (fixed for 4.0 release)*
- unsigned short [RowFecOffset](#)  
*default value row offset = 4 (fixed for 4.0 release)*
- unsigned short [D\\_ColDepth](#)  
*note: the name of this member changed from 5.0->5.1 The old name was D\_RowWidth*
- unsigned short [L\\_RowLength](#)  
*note: the name of this member changed from 5.0->5.1.*

#### 10.321.1 Detailed Description

Default FEC encoder settings (to be applied for new TS's)

Definition at line 19410 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.322 DCM::DeviceControl::OutTS\_FEC\_Enc\_ErrorGen.t Struct Reference

FEC error generation for specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_FEC\_Enc\_ErrorGen\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTSOut](#)
- [FEC\\_Enc\\_ErrorGen\\_t FecEncErrorSett](#)

#### 10.322.1 Detailed Description

FEC error generation for specific TS.

Definition at line 19444 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.323 DCM::DeviceControl::OutTS\_FEC\_Enc\_Overhead\_t Struct Reference

Bitrate overhead for specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_FEC\_Enc\_Overhead\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTSOut](#)
- [FEC\\_Enc\\_Overhead\\_t FecEncOverhead](#)

### 10.323.1 Detailed Description

Bitrate overhead for specific TS.

Definition at line 19459 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.324 DCM::DeviceControl::OutTS\_FEC\_Enc\_Setting\_t Struct Reference

FEC encoder settings for specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_FEC\_Enc\_Setting\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTSOut](#)
- [FEC\\_Enc\\_Setting\\_t FecEncSett](#)

### 10.324.1 Detailed Description

FEC encoder settings for specific TS.

Definition at line 19377 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.325 DCM::DeviceControl::OutTS\_FEC\_Enc\_Setting\_V2\_t Struct Reference

FEC encoder settings for specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_FEC\_Enc\_Setting\_V2\_t:

**Public Attributes**

- [IPS\\_RefTS\\_t RefTS](#)
- [FEC\\_Enc\\_Setting\\_V2\\_t FecEncSett](#)

**10.325.1 Detailed Description**

FEC encoder settings for specific TS.

Definition at line 19398 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.326 DCM::DeviceControl::OutTS\_InsertCATDescriptors\_t Struct Reference**

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_InsertCATDescriptors\_t:

**Public Attributes**

- [IPS\\_RefTS\\_t RefTsOut](#)
- [eInsertCATDescriptors InsertCATDescriptors](#)

**10.326.1 Detailed Description**

Definition at line 2926 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.327 DCM::DeviceControl::OutTS\_NitInPat\_t Struct Reference

NIT in PAT setting for specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_NitInPat\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTsOut](#)
- [eNitInPat NitInPat](#)

#### 10.327.1 Detailed Description

NIT in PAT setting for specific TS.

Definition at line 4006 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.328 DCM::DeviceControl::OutTS\_PsipEitStartPid\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_PsipEitStartPid\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [StartPid](#)

## 10.328.1 Detailed Description

Definition at line 9281 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.329 DCM::DeviceControl::OutTS\_PsipEttStartPid\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_PsipEttStartPid\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [StartPid](#)

#### 10.329.1 Detailed Description

Definition at line 9289 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.330 DCM::DeviceControl::OutTS\_PsipEttvPid\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_PsipEttvPid\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [Pid](#)

#### 10.330.1 Detailed Description

Definition at line 9571 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.331 DCM::DeviceControl::OutTS\_SrcAddr\_t Struct Reference

Source Address parameters for an OutTS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_SrcAddr\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t m\\_RefTs](#)
- [SrcAddr\\_t m\\_SrcAddr](#)

#### 10.331.1 Detailed Description

Source Address parameters for an OutTS.

Used for all ports in a portset, both mpeg streams and fec streams.

Definition at line 18188 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.332 DCM::DeviceControl::OutTS\_SrcAddr\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_SrcAddr\_V2\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t m\\_RefTs](#)
- [SrcAddr\\_t m\\_SrcAddr](#)
- boolean [m\\_DynamicSrcUdpPort](#)

#### 10.332.1 Detailed Description

Definition at line 18196 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.333 DCM::DeviceControl::OutTS\_SttTimeZone\_t Struct Reference

Transport stream specific STT time zone setting.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_SttTimeZone\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- string [TimeZone](#)

#### 10.333.1 Detailed Description

Transport stream specific STT time zone setting.

Definition at line 8963 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.334 DCM::DeviceControl::OutTS\_TOS\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_TOS\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [TOS\\_Value](#)

#### 10.334.1 Detailed Description

Definition at line 18090 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.335 DCM::DeviceControl::OutTS\_TTL\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_TTL\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [TTL\\_Value](#)

#### 10.335.1 Detailed Description

Definition at line 18250 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.336 DCM::DeviceControl::OutTS\_UdpSize\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_UdpSize\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- unsigned short [UdpSize](#)

#### 10.336.1 Detailed Description

Definition at line 18407 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.337 DCM::DeviceControl::OutTS\_VBR\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_VBR\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- [eVBR VBROnOff](#)

#### 10.337.1 Detailed Description

Definition at line 18331 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.338 DCM::DeviceControl::OutTS\_VLAN\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTS\_VLAN\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- [VLAN\\_Settings\\_t VLAN](#)

#### 10.338.1 Detailed Description

Definition at line 18011 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.339 DCM::DeviceControl::OutTsServiceLocationAdded\_t Struct Reference

Transport stream specific "Service Location Added" setting parameters.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTsServiceLocationAdded\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- boolean [Added](#)

#### 10.339.1 Detailed Description

Transport stream specific "Service Location Added" setting parameters.

Definition at line 9209 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.340 DCM::DeviceControl::OutTsStandard\_t Struct Reference

Transport stream specific Output TS Standard setting parameters.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::OutTsStandard\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- [eTableStandard\\_t eStandard](#)

#### 10.340.1 Detailed Description

Transport stream specific Output TS Standard setting parameters.

Definition at line 8881 of file DCM.idl.

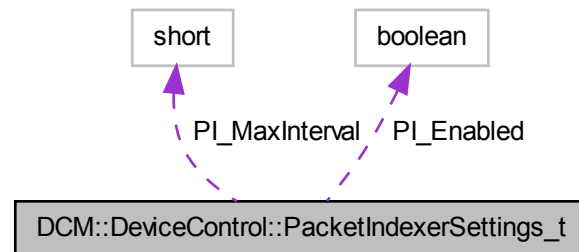

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.341 DCM::DeviceControl::PacketIndexerSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PacketIndexerSettings\_t:

#### Public Attributes

- boolean [PI\\_Enabled](#)
- unsigned short [PI\\_MaxInterval](#)  
*range 100..1000ms, in steps of 10ms*

#### 10.341.1 Detailed Description

Definition at line 29288 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.342 DCM::DeviceControl::PcrSetting\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PcrSetting\_t:

## Public Attributes

- [AlternateSrcId\\_t](#) `AlternateSrcId`

*Identifies the alternate service for a specific output service.*

- [IPS\\_RefPid\\_t](#) `InputPidRef`

*If Board, Port and TS Reference are invalid (0xFFFFFFFF), < this meanse it's a "dummy" PCR. Input PID value is used as < preferred output PID value. When set to INVALID\_PID\_VALUE < this means that the PCR will be removed.*

### 10.342.1 Detailed Description

Definition at line 5974 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.343 DCM::DeviceControl::PCTM\_PacketCounters\_t Struct Reference

Packet counter values.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PCTM\_PacketCounters\_t:

### Public Attributes

- unsigned long long [MissingPackets\\_BeforeErrorCorrection\\_Main](#)
- unsigned long long [MissingPackets\\_BeforeErrorCorrection\\_Backup](#)
- unsigned long long [ValidPackets](#)
- unsigned long long [MissingPackets\\_AfterErrorCorrection](#)
- unsigned long long [FixedPackets](#)
- unsigned long long [DuplicatePackets](#)
- unsigned long long [ReorderedPackets](#)
- unsigned long long [OutOfRangePackets](#)

### 10.343.1 Detailed Description

Packet counter values.

Unit: number of packets.

Definition at line 20303 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.344 DCM::DeviceControl::PCTM\_StreamPacketCounters\_t Struct Reference

Packet counters of one stream.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PCTM\_StreamPacketCounters\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTSIn](#)
- [PCTM\\_PacketCounters\\_t PacketCounters](#)

#### 10.344.1 Detailed Description

Packet counters of one stream.

Definition at line 20317 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.345 DCM::DeviceControl::PCTM\_StreamThresholdSettings\_t Struct Reference

Threshold settings for the packet types of one stream.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PCTM\_StreamThresholdSettings\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTSIn](#)
- [PCTM\\_ThresholdValues\\_t ThresholdValues](#)

#### 10.345.1 Detailed Description

Threshold settings for the packet types of one stream.

Definition at line 20287 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.346 DCM::DeviceControl::PCTM\_ThresholdValues\_t Struct Reference

Threshold settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PCTM\_ThresholdValues\_t:

#### Public Attributes

- unsigned long [MissingPackets\\_BeforeErrorCorrection](#)
- unsigned long [MissingPackets\\_AfterErrorCorrection](#)
- unsigned long [FixedPackets](#)
- unsigned long [OutOfRangePackets](#)

#### 10.346.1 Detailed Description

Threshold settings.

A non-zero threshold value denotes that threshold monitoring is enabled, otherwise disabled.

Unit: number of packets per 30 sec measurement window.

Definition at line 20277 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.347 DCM::DeviceControl::PortFilter\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PortFilter\_t:

#### Public Attributes

- [ePortFilterType](#) `PortFilterType`
- [ePortFilterMode](#) `PortFilterMode`

#### 10.347.1 Detailed Description

Definition at line 18536 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.348 DCM::DeviceControl::PortTsSvcProps\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PortTsSvcProps\_t:

#### Public Attributes

- [IPS\\_Ref\\_t RefPhys](#)
- unsigned long [TsProps](#)  
*Bit map of aggregated TS Properties on a port.*
- unsigned long [SvcProps](#)

#### 10.348.1 Detailed Description

Definition at line 4616 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.349 DCM::DeviceControl::PriorityBitMode\_t Struct Reference

Compact CA descriptor setting (per input TS)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PriorityBitMode\_t:

#### Public Attributes

- [ePriorityBitMode Mode](#)
- [boolean FollowDefaultRule](#)

*readonly flag indicating if default priority bit settings are used*

#### 10.349.1 Detailed Description

Compact CA descriptor setting (per input TS)

Definition at line 4341 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.350 DCM::DeviceControl::PSIGSubTable\_t Struct Reference

Structure that describes a PSIG provision.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PSIGSubTable\_t:

### Public Attributes

- unsigned long [OnId](#)  
*As in PSIG channel setup.*
- unsigned long [TsId](#)  
*As in PSIG channel setup.*
- ePsigType [PsigType](#)  
*Property of this PSIG connection (SA specific or not)*
- long [PsigId](#)  
*Identification of the PSIG connection (as used in the scrambler.idl functions)*
- unsigned short [ChannelId](#)  
*PSIG protocol channel ID.*
- unsigned short [StreamId](#)  
*PSIG protocol stream ID.*
- [TableKeys\\_t](#) [Keys](#)  
*Table Keys (extracted from the sections which were provisioned)*
- unsigned short [Pid](#)  
*As in PSIG stream setup.*

#### 10.350.1 Detailed Description

Structure that describes a PSIG provision.

Definition at line 8338 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.351 DCM::DeviceControl::PsipMgtInfo\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PsipMgtInfo\_t:

#### Public Attributes

- unsigned short [PID](#)
- unsigned short [TableType](#)
- unsigned short [VersionNumber](#)

#### 10.351.1 Detailed Description

Definition at line 9695 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.352 DCM::DeviceControl::PsipUpdateLocation\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PsipUpdateLocation\_t:

#### Public Attributes

- `octet` [Id](#)
- `unsigned long` [Detail](#)

#### 10.352.1 Detailed Description

Definition at line 8464 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.353 DCM::DeviceControl::PsipUpdateRule\_t Struct Reference

Definition of a PsipUpdate Rule Rule: number uniquely defining a rule 0: Add/update descriptor 2: - Remove descriptor (this list should be updated when more rules are supported) RuleName: actual meaning of the rule (see above) Location: 0x02, 0xFFFFFFFF: PMT 0xCB, start-time: PsipEIT event RuleData: extra data of rule in readable form (UTF-8): Add/update descriptor: new descriptor in hex-string.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::PsipUpdateRule\_t:

#### Public Attributes

- octet [Rule](#)
- string [RuleName](#)
- [PsipUpdateLocation\\_t](#) [Location](#)
- string [RuleData](#)

#### 10.353.1 Detailed Description

Definition of a PsipUpdate Rule Rule: number uniquely defining a rule 0: Add/update descriptor 2: - Remove descriptor (this list should be updated when more rules are supported) RuleName: actual meaning of the rule (see above) Location: 0x02, 0xFFFFFFFF: PMT 0xCB, start-time: PsipEIT event RuleData: extra data of rule in readable form (UTF-8): Add/update descriptor: new descriptor in hex-string.

e.g. "050443554549" Remove descriptor: descriptor tag in 2-character hex. e.g. "05"

Definition at line 8483 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.354 DCM::DeviceControl::Ref\_SI\_table\_ext\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Ref\_SI\_table\_ext\_t:

#### Public Attributes

- [eMpegStandard](#) `Standard`
- unsigned short `table_id`
- unsigned short `table_type`
- string `TableName`

#### 10.354.1 Detailed Description

Definition at line 2659 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.355 DCM::DeviceControl::RefProcessorEngineUnit\_t Struct Reference

Identify a processing engine unit of a processor board.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RefProcessorEngineUnit\_t:

#### Public Attributes

- unsigned short [EngineNr](#)  
*The processing engine.*
- unsigned short [UnitNr](#)  
*The unit within a processing engine.*

#### 10.355.1 Detailed Description

Identify a processing engine unit of a processor board.

Definition at line 10328 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.356 DCM::DeviceControl::ResourcesLoad\_t Struct Reference

Resource loads.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ResourcesLoad\_t:

#### Public Attributes

- [enMFPB\\_Resources Resources](#)

*The type of resources.*

- unsigned long [Load100](#)

*The relative load of resources times 100. If the value is 3456, the load is 34.56%.*

#### 10.356.1 Detailed Description

Resource loads.

#### Version

Release 10.10

Definition at line 10307 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.357 DCM::DeviceControl::RestoreOption Struct Reference

Single settings restore option.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RestoreOption:

#### Public Attributes

- [eRestoreOption Option](#)  
*Which option.*
- `boolean` [Enabled](#)  
*Should the option be used.*

#### 10.357.1 Detailed Description

Single settings restore option.

Definition at line 21476 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.358 DCM::DeviceControl::RestoreOption\_V2 Struct Reference

Single settings restore option.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RestoreOption\_V2:

#### Public Attributes

- [eRestoreOption\\_V2 Option](#)  
*Which option.*
- [boolean Enabled](#)  
*Should the option be used.*

#### 10.358.1 Detailed Description

Single settings restore option.

Definition at line 21688 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.359 DCM::DeviceControl::RipBoardSettings Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RipBoardSettings:

### Public Attributes

- [RipSettings\\_t Defaults](#)
- unsigned short [UpdateInterval](#)  
*Update interval for RIP messages. Effective interval. Range [1, 300], default 30.*
- unsigned short [HoldTimeout](#)  
*Time to keep advertising alarm metric after TS Loss cleared or TS removed/stopped streaming. Range[1, 1800], default 180.*

### 10.359.1 Detailed Description

Definition at line 31932 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.360 DCM::DeviceControl::RipInterfaceSettings Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RipInterfaceSettings:

#### Public Attributes

- [IPS\\_Ref\\_t PortRef](#)  
*PhysRef of physical/virtual interface.*
- string [RouterAddress](#)  
*Router address, one of [224.0.0.9, 224.0.0.2, 255.255.255.255, unicast address in subnet], default 224.0.0.-9.*

#### 10.360.1 Detailed Description

Definition at line 31962 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.361 DCM::DeviceControl::RipSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RipSettings\_t:

### Public Attributes

- boolean [Enabled](#)  
*Whether RIP is enabled by default for new TS's.*
- unsigned short [NormalMetric](#)  
*RIP metric to be advertised when TS is streaming and in good shape. Range [1,16], default 1.*
- unsigned short [AlarmMetric](#)  
*RIP metric to be advertised when TS is not streaming or in bad shape. Range [1,16], default 16.*
- unsigned short [RouteTag](#)  
*Value for the Route tag field. Range [0, 65535], default 0.*

### 10.361.1 Detailed Description

Definition at line 31924 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.362 DCM::DeviceControl::RipTsSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RipTsSettings\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t TSRef](#)  
*TSRef of TS.*
- [RipSettings\\_t Settings](#)

#### 10.362.1 Detailed Description

Definition at line 31997 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.363 DCM::DeviceControl::RMX\_GroupSettings\_t Struct Reference

Realignment Mux group settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RMX\_GroupSettings\_t:

## Public Attributes

- [RMX\\_GroupID\\_t GroupID](#)  
*ID of the group: read-only, ignored during creation.*
- [string Name](#)  
*Name: writable, the same name may be used multiple times, it exists only for user ref. Not used internally by the DCM. Name length limited to 32 characters.*
- [eRMX\\_GroupType\\_t Type](#)  
*Type of group: write-once on creation, read-only after creation.*
- [IPS\\_RefTS\\_t Location](#)  
*Location of group (depends on Type: can be TS or Port only): write-once on creation, read-only after creation. REQUIREMENT: Should be a port for group type MultiTS and be a TS for the other group types.*
- [unsigned long EndToEndDelay](#)  
*The actual end-to-end delay that the remote statmux service using realignment muxing will have. This is the maximal network delay that can be compensated for between any of the encoders of the realignment group and the remux device across the network. In milliseconds. Range: from 150ms to 1000ms.*

### 10.363.1 Detailed Description

Realignment Mux group settings.

Definition at line 15634 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.364 DCM::DeviceControl::RMX\_GroupSvc\_t Struct Reference

A service that is part of a Realignment Mux group.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RMX\_GroupSvc\_t:

## Public Attributes

- [IPS\\_Service\\_t SvcRef](#)

*The reference of the service.*

- [eRMX\\_ServiceStatus\\_t SvcStatus](#)

*The status of the RMX'ed service. < Read-only. Filled in when service is retrieved.*

- long [SvcAppliedDelay](#)

*The applied delay of the RMX'ed service in millisecs. Read-only. Filled in when service is retrieved. To be ignored if service has status Blocked\_NoMarkers. Takes on a negative value if the service has status Blocked\_NegativeDelay, and a non-negative one if service has status Passed\_Delayed. The magnitude of negative Applied Delay indicates how much the end-to-end delay should be increased.*

### 10.364.1 Detailed Description

A service that is part of a Realignment Mux group.

Definition at line 15713 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.365 DCM::DeviceControl::RMX\_GroupSvcs\_t Struct Reference

A set of services belonging to the same Realignment Mux group.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RMX\_GroupSvcs\_t:

### Public Attributes

- [RMX\\_GroupID\\_t GroupID](#)  
*The group reference. The group should already exist.*
- [RMX\\_GroupSvc\\_List\\_t SvcList](#)  
*sequence of services*

### 10.365.1 Detailed Description

A set of services belonging to the same Realignment Mux group.

Definition at line 15734 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.366 DCM::DeviceControl::RoutingData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RoutingData\_t:

**Public Attributes**

- [IPS\\_RefTS\\_t RefOut](#)
- [IPS\\_RefTS\\_t RefIn](#)

## 10.366.1 Detailed Description

Definition at line 30151 of file DCM.idl.

The documentation for this struct was generated from the following file:

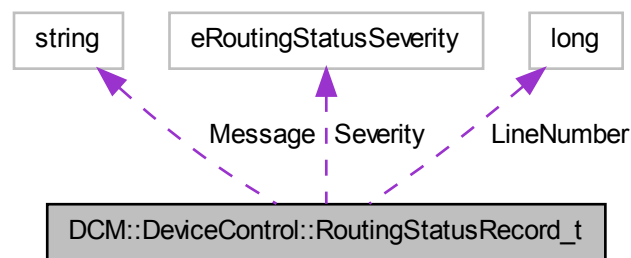

- [DCM.idl](#)

## 10.367 DCM::DeviceControl::RoutingStatusRecord\_t Struct Reference

Structure that contains information about one error that occurred during routing file upload (pre-config - IPS\_ProcessRoutingFile)

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::RoutingStatusRecord\_t:

### Public Attributes

- long [LineNumber](#)  
*Line number on which error occurred.*
- [eRoutingStatusSeverity](#) [Severity](#)  
*Warning, Error, Fatal.*
- string [Message](#)  
*Text description of the error.*

### 10.367.1 Detailed Description

Structure that contains information about one error that occurred during routing file upload (pre-config - IPS\_ProcessRoutingFile)

Definition at line 2799 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.368 DCM::DeviceControl::ScriptEntry\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ScriptEntry\_t:

#### Public Attributes

- unsigned long [ScriptId](#)  
*The Id assigned to this script.*
- string [ScriptName](#)  
*The unique name of the script.*
- unsigned short [ScriptVersion](#)  
*The version of the script, several versions of the same script can be installed.*
- boolean [Running](#)  
*Whether script is currently running.*
- boolean [AutoRun](#)  
*Whether the script will be automatically run on startup.*

#### 10.368.1 Detailed Description

Definition at line 31752 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.369 DCM::DeviceControl::Scte35CommandAndData\_t Union Reference

Union containing data structures of SCTE-35 commands.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35CommandAndData\_t:

## Public Attributes

- [Scte35Data\\_REDUS\\_Switch\\_t](#) `Data_REDUS_Switch`
- [Scte35Data\\_DCM\\_input\\_switch\\_t](#) `Data_DCM_input_switch`
- [Scte35Data\\_Select\\_now\\_t](#) `Data_Select_now`
- [Scte35Data\\_Network\\_active\\_t](#) `Data_Network_active`
- [Scte35Data\\_Local\\_avail\\_t](#) `Data_Local_avail`
- [Scte35Data\\_Keyer\\_t](#) `Data_Keyer`
- [Scte35Data\\_Keyer\\_config\\_t](#) `Data_Keyer_config`
- [Scte35Data\\_Logo\\_enable\\_t](#) `Data_Logo_Enable`
- [Scte35Data\\_REDUS\\_Switch\\_Single\\_t](#) `Data_REDUS_Switch_single`

### 10.369.1 Detailed Description

Union containing data structures of SCTE-35 commands.

Definition at line 8677 of file `DCM.idl`.

The documentation for this union was generated from the following file:

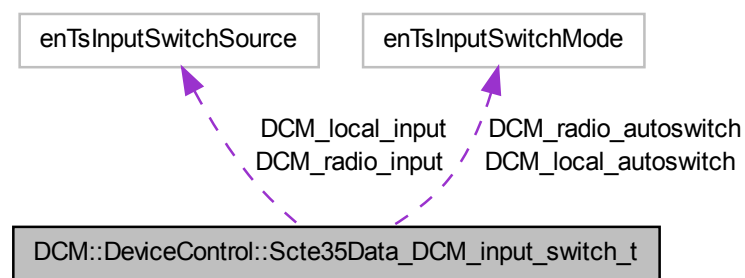

- [DCM.idl](#)

## 10.370 DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t Struct Reference

The data struct for SCTE-35 command eDCM\_input\_switch.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_DCM\_input\_switch\_t:

### Public Attributes

- [enTsInputSwitchSource](#) [DCM\\_radio\\_input](#)
- [enTsInputSwitchMode](#) [DCM\\_radio\\_autoswitch](#)
- [enTsInputSwitchSource](#) [DCM\\_local\\_input](#)
- [enTsInputSwitchMode](#) [DCM\\_local\\_autoswitch](#)

### 10.370.1 Detailed Description

The data struct for SCTE-35 command eDCM\_input\_switch.

Definition at line 8622 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.371 DCM::DeviceControl::Scte35Data\_Keyer\_config\_t Struct Reference

The data struct for SCTE-35 command eKeyer\_config.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Keyer\_config\_t:

### Public Attributes

- unsigned long [Keyer\\_id](#)
- unsigned long [Logo\\_file\\_number](#)
- [enMotionMode](#) [Motion\\_mode](#)
- boolean [Update\\_flag](#)
- unsigned short [Position\\_x\\_offset](#)
- unsigned short [Position\\_y\\_offset](#)
- unsigned short [Transition\\_rate\\_on](#)
- unsigned short [Transition\\_rate\\_off](#)
- unsigned short [Opacity](#)

#### 10.371.1 Detailed Description

The data struct for SCTE-35 command eKeyer\_config.

Definition at line 8657 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

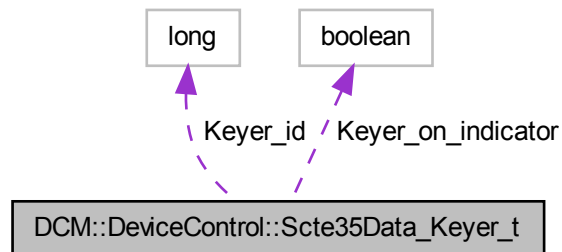

### 10.372 DCM::DeviceControl::Scte35Data\_Keyer\_t Struct Reference

The data struct for SCTE-35 command eKeyer\_on\_or\_off.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Keyer\_t:

#### Public Attributes

- unsigned long [Keyer\\_id](#)
- boolean [Keyer\\_on\\_indicator](#)

#### 10.372.1 Detailed Description

The data struct for SCTE-35 command `eKeyer_on_or_off`.

Definition at line 8650 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

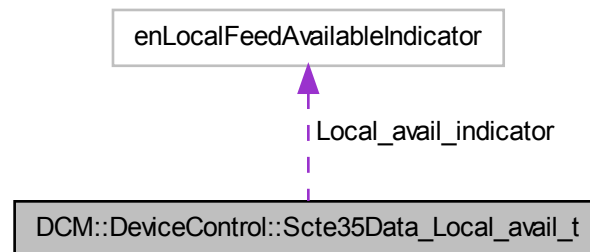

- [DCM.idl](#)

### 10.373 DCM::DeviceControl::Scte35Data\_Local\_avail\_t Struct Reference

The data struct for SCTE-35 command `eLocal_avail_enable_or_disable`.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Local\_avail\_t:

#### Public Attributes

- [enLocalFeedAvailableIndicator Local\\_avail\\_indicator](#)

#### 10.373.1 Detailed Description

The data struct for SCTE-35 command `eLocal_avail_enable_or_disable`.

Definition at line 8644 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

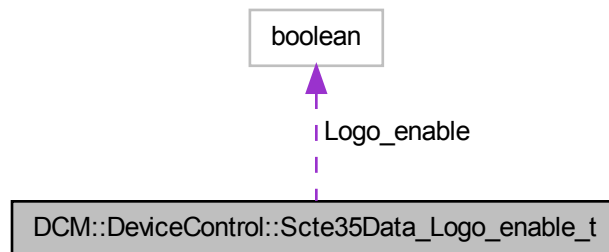

- [DCM.idl](#)

#### 10.374 DCM::DeviceControl::Scte35Data\_Logo\_enable\_t Struct Reference

The data struct for SCTE-35 command `eLogo_enable_or_disable`.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Logo\_enable\_t:

#### Public Attributes

- boolean [Logo\\_enable](#)

#### 10.374.1 Detailed Description

The data struct for SCTE-35 command `eLogo_enable_or_disable`.

Definition at line 8671 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

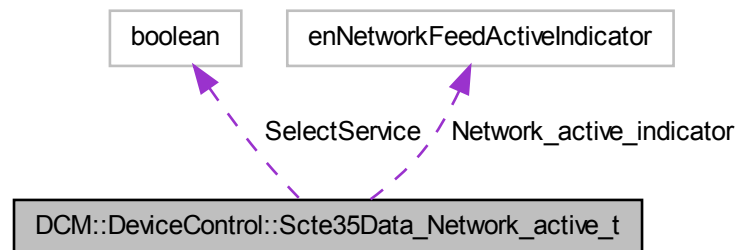

- [DCM.idl](#)

#### 10.375 DCM::DeviceControl::Scte35Data\_Network\_active\_t Struct Reference

The data struct for SCTE-35 command `eNetwork_feed_active_or_inactive`.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Network\_active\_t:

#### Public Attributes

- `enNetworkFeedActiveIndicator` `Network_active_indicator`
- `boolean` `SelectService`

#### 10.375.1 Detailed Description

The data struct for SCTE-35 command `eNetwork_feed_active_or_inactive`.

Definition at line 8637 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

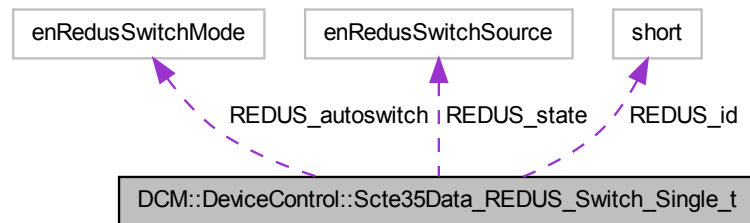

- [DCM.idl](#)

#### 10.376 DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_Single\_t Struct Reference

The data struct for SCTE-35 command `eREDUS_switch_single`.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_Single\_t:

#### Public Attributes

- unsigned short [REDUS\\_id](#)
- [enRedusSwitchSource](#) [REDUS\\_state](#)
- [enRedusSwitchMode](#) [REDUS\\_autoswitch](#)

#### 10.376.1 Detailed Description

The data struct for SCTE-35 command `eREDUS_switch_single`.

Definition at line 8614 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

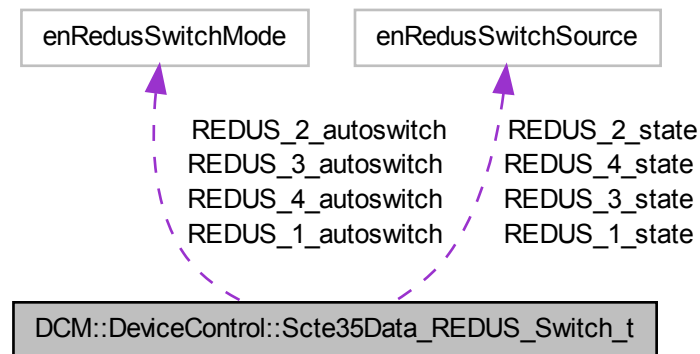

- [DCM.idl](#)

#### 10.377 DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_t Struct Reference

The data struct for SCTE-35 command `eREDUS_switch`.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_REDUS\_Switch\_t:

#### Public Attributes

- [enRedusSwitchSource REDUS\\_1\\_state](#)
- [enRedusSwitchMode REDUS\\_1\\_autoswitch](#)
- [enRedusSwitchSource REDUS\\_2\\_state](#)
- [enRedusSwitchMode REDUS\\_2\\_autoswitch](#)
- [enRedusSwitchSource REDUS\\_3\\_state](#)
- [enRedusSwitchMode REDUS\\_3\\_autoswitch](#)
- [enRedusSwitchSource REDUS\\_4\\_state](#)
- [enRedusSwitchMode REDUS\\_4\\_autoswitch](#)

#### 10.377.1 Detailed Description

The data struct for SCTE-35 command eREDUS\_switch.

Definition at line 8601 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.378 DCM::DeviceControl::Scte35Data\_Select\_now\_t Struct Reference

The data struct for SCTE-35 command eSelect\_now.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Data\_Select\_now\_t:

#### Public Attributes

- unsigned long [SID](#)  
*A.k.a. Program number.*

#### 10.378.1 Detailed Description

The data struct for SCTE-35 command `eSelect_now`.

Definition at line 8631 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.379 DCM::DeviceControl::Scte35Source\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35Source\_t:

### Public Attributes

- [IPS\\_Service\\_t SvcOut](#)
- [eScte35Source Scte35Source](#)  
*The source of which the SCTE35 messages < should be processed.*
- [AlternateSrcId\\_t OtherSrcId](#)  
*the ID of this alternate source, < if Scte35Source == other*

### 10.379.1 Detailed Description

Definition at line 17817 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.380 DCM::DeviceControl::Scte35ToggleOutOfNetwork\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Scte35ToggleOutOfNetwork\_t:

### Public Attributes

- [IPS\\_Service\\_t SvcOut](#)
- boolean [ToggleOutOfNetwork](#)

*Set to True if the out\_of\_network\_indicator bit should be toggled.*

#### 10.380.1 Detailed Description

Definition at line 17856 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.381 DCM::DeviceControl::SelectionListEntry\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SelectionListEntry\_t:

#### Public Attributes

- [SelectionId\\_t SelectionId](#)
- [EsList\\_t EsList](#)

#### 10.381.1 Detailed Description

Definition at line 12878 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.382 DCM::DeviceControl::Service\_AutoPassRules Struct Reference

Service component behaviour.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Service\_AutoPassRules:

### Public Attributes

- boolean [PassDeleteESs](#)  
*read-write; true = ESs are auto passed/deleted; false = block of ESs; default true*
- boolean [PassDeleteECMs](#)  
*read-write; true = ECMs are auto passed/deleted; false = block of ECMs; default true*
- boolean [PassDeleteES\\_ECMs](#)  
*read-write; true = ES\_ECMs are auto passed/deleted; false = block of ES\_ECMs*
- boolean [ES\\_RuleDisabled](#)  
*read-only; true = ES rule is disabled and PassDeleteESs cannot be changed by the user; false = PassDeleteESs can be configured by the user;*
- boolean [ECM\\_RuleDisabled](#)  
*read-only; true = ECM rule is disabled and PassDeleteECMs cannot be changed by the user; false = PassDeleteECMs can be configured by the user;*
- boolean [ES\\_ECM\\_RuleDisabled](#)  
*read-only; true = ES\_ECM rule is disabled and PassDeleteES\_ECMs cannot be changed by the user; false = PassDeleteES\_ECMs can be configured by the user;*

### 10.382.1 Detailed Description

Service component behaviour.

Definition at line 2887 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.383 DCM::DeviceControl::ServiceBackupParams2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceBackupParams2\_t:

#### Public Attributes

- `eServiceBackupMode_t` `BU_Mode`
- unsigned long `HighToLowPriorityDelay`
- unsigned long `LowToHighPriorityDelay`

#### 10.383.1 Detailed Description

Definition at line 23094 of file `DCM.idl`.

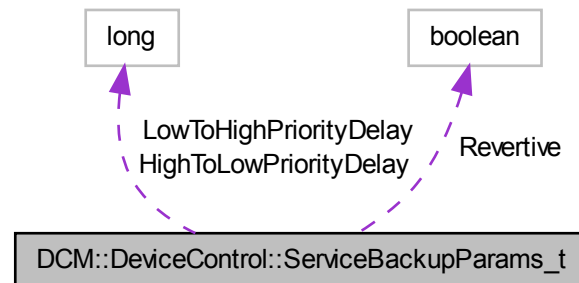

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.384 DCM::DeviceControl::ServiceBackupParams\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceBackupParams\_t:

#### Public Attributes

- boolean [Revertive](#)
- unsigned long [HighToLowPriorityDelay](#)  
*time in seconds to wait before switching to backup*
- unsigned long [LowToHighPriorityDelay](#)  
*time in seconds to wait before switching back to main input*

#### 10.384.1 Detailed Description

Definition at line 23040 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.385 DCM::DeviceControl::ServiceBitRateMeasurement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceBitRateMeasurement\_t:

### Public Attributes

- [IPS\\_Service\\_t Service](#)
- [BitRateMeasurement\\_t Rate](#)

#### 10.385.1 Detailed Description

Definition at line 9797 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.386 DCM::DeviceControl::ServiceBitRateSample\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceBitRateSample\_t:

#### Public Attributes

- [IPS\\_Service\\_t Service](#)
- [BitRateSampleList\\_t Sample](#)

#### 10.386.1 Detailed Description

Definition at line 9837 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.387 DCM::DeviceControl::ServiceBlockCAInfo\_t Struct Reference

Outgoing service information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceBlockCAInfo\_t:

### Public Attributes

- [IPS\\_Service\\_t RefServ](#)
- boolean [blockCAInfo](#)

*Indicates if the CA info needs to be blocked for the service. If true, the EIT, SDT and PMT table is updated and ECM components are blocked.*

### 10.387.1 Detailed Description

Outgoing service information.

Definition at line 4987 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.388 DCM::DeviceControl::ServiceCompBitRateMeasurement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceCompBitRateMeasurement\_t:

## Public Attributes

- [IPS\\_Service\\_t](#) Service
- unsigned short [PID](#)
- string [strCompType](#)  
*PMT, ES, ES\_ECM, ECM.*
- octet [ES\\_Type](#)  
*dvb streamtype.*
- string [strEsType](#)  
*Interpretation of Es\_Type in regard to m\_EsTypeStandard of the TS. Read only.*
- [BitRateMeasurement\\_t](#) Rate

### 10.388.1 Detailed Description

Definition at line 9817 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.389 DCM::DeviceControl::ServiceCompSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceCompSettings\_t:

## Public Attributes

- unsigned long [m\\_ulOutputSID](#)  
*Output service ID value. Will be ignored if INVALID\_SID\_VALUE.*
- unsigned long [m\\_ulPCR](#)  
*1 means (un)block the PCR PID in this service (other information will be ignored).*
- [InPID\\_Data\\_t m\\_PidRef](#)  
*Reference to the input pid to be blocked.*
- [ePIDPassingStatus m\\_ePID\\_Status](#)  
*The new passing status.*
- unsigned short [m\\_usOutputPid](#)
- boolean [m\\_bForced](#)
- boolean [m\\_bTracked](#)
- unsigned long [m\\_ulTrackRuleID](#)

### 10.389.1 Detailed Description

Definition at line 5740 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.390 DCM::DeviceControl::ServiceES\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceES\_t:

## Public Attributes

- unsigned long [OutputSID](#)
- [IPS\\_RefTS\\_t](#) [RefTSIn](#)
- unsigned long [InputSID](#)
- long [OldPID](#)

## 10.390.1 Detailed Description

Definition at line 5863 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.391 DCM::DeviceControl::ServiceLossTrigger\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServiceLossTrigger\_t:

## Public Attributes

- [IPS\\_Service\\_t service](#)
- [TriggerBitmap\\_t triggerBitmap](#)
- [PID\\_List\\_t pidList](#)

*PID range: 0..8190, List of pids to monitor: only evaluated in case bit 6 in the TriggerBitmap\_t is set.*

## 10.391.1 Detailed Description

Definition at line 20844 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.392 DCM::DeviceControl::ServicePIDStatus\_t Struct Reference

Identification of the service(s) to (un)block PIDs in.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::ServicePIDStatus\_t:

## Public Attributes

- [ePIDPassingStatus m\\_ePID\\_Status](#)  
*The new passing status.*
- unsigned long [m\\_ulOutputSID](#)  
*Output service ID value.*
- unsigned long [m\\_ulPCR](#)  
*1 means (un)block the PCR PID in this service (other information will be ignored).*
- [InPID\\_Data\\_t m\\_PidRef](#)  
*Reference to the input pid to be blocked.*

## 10.392.1 Detailed Description

Identification of the service(s) to (un)block PIDs in.

Will be replaced by [ServiceCompSettings\\_t](#)

Definition at line 5724 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.393 DCM::DeviceControl::SI\_AutoPassRules\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SI\_AutoPassRules\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t InputRef](#)  
*TS from which to auto-pass.*
- unsigned short [InputPid](#)  
*PID from which to auto-pass.*
- unsigned long [TableId](#)  
*TID to auto-pass - Use 0x4F for EITo p/f.*
- unsigned short [OutputPid](#)  
*PID on which to play out autopassed tables.*
- [TableKeys\\_List\\_t ExceptionList](#)  
*List of tables which will not be auto-passed.*

#### 10.393.1 Detailed Description

Definition at line 2901 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.394 DCM::DeviceControl::SI\_Table\_GenerationMode\_t Struct Reference

Generation mode for SI tables.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SI\_Table\_GenerationMode\_t:

### Public Attributes

- [Ref\\_SI\\_table\\_ext\\_t](#) Ref
- [ePIDPassingStatus](#) Mode

### 10.394.1 Detailed Description

Generation mode for SI tables.

Definition at line 2736 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.395 DCM::DeviceControl::SI\_Table\_Period\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SI\_Table\_Period\_t:

#### Public Attributes

- [Ref\\_SI\\_table\\_ext\\_t](#) [Ref](#)
- unsigned long [Period](#)

#### 10.395.1 Detailed Description

Definition at line 2728 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.396 DCM::DeviceControl::SlateData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SlateData\_t:

#### Public Attributes

- [ClipID\\_t ID](#)
- `string` [Description](#)
- unsigned short [Width](#)
- unsigned short [Height](#)
- unsigned short [FrameRate](#)
- `boolean` [IsInUse](#)

#### 10.396.1 Detailed Description

Definition at line 10078 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.397 DCM::DeviceControl::SlateService\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SlateService\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t RefSvc](#)
- [ClipID\\_t ClipID](#)

#### 10.397.1 Detailed Description

Definition at line 16795 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.398 DCM::DeviceControl::SMX36\_AlgorithmIdentifier\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_AlgorithmIdentifier\_t:

#### Public Attributes

- [SMX36\\_AlgorithmType\\_e](#) [Type](#)  
*Algorithm Type.*
- unsigned long [MajorVersion](#)  
*Major version part: the xx out of Vxx.yy.*
- unsigned long [MinorVersion](#)  
*Minor version part: the yy out of Vxx.yy.*

#### 10.398.1 Detailed Description

Definition at line 23883 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.399 DCM::DeviceControl::SMX36\_Community\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_Community\_t:

#### Public Attributes

- string [Name](#)  
*Name of the statmux community MAX string length = 20.*
- string [MulticastIPAddress](#)  
*The Community multicast IP used by units to join the statmux community.*
- unsigned short [UdpPort](#)  
*Community communication port range: 1024 (0X400) .. 65535.*

#### 10.399.1 Detailed Description

Definition at line 23671 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.400 DCM::DeviceControl::SMX36\_Encoder\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_Encoder\_t:

### Public Attributes

- long [Id](#)  
*Encoder Id.*
- string [EncoderIPAddress](#)  
*RO IPaddress of the encoder management port.*
- string [EncoderName](#)  
*RO Name of the Encoder running. (MAX string length = 20)*
- unsigned short [EcoderVSECapacity](#)  
*RO The Maximum number of VSE the current encoder can handle.*
- [SMX36\\_EncoderStatus\\_e](#) [status](#)  
*RO Status of the Encoder (Read only).*
- unsigned long [Encoder\\_Property](#)  
*Read only Bitmap used by GUI to display specific icons.*

#### 10.400.1 Detailed Description

Definition at line 23934 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.401 DCM::DeviceControl::SMX36\_NetworkQoS\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_NetworkQoS\_t:

### Public Attributes

- unsigned short [TTL\\_Value](#)  
*TTL (Time to live) range [1-255].*
- [SMX36\\_QoSMode\\_e](#) [QoSMode](#)  
*QoS Mode.*
- [SMX36\\_ToS\\_e](#) [ToS](#)  
*(mode ToS\_CoS\_Precedence) ToS value (not custom).*
- [SMX36\\_CoS\\_e](#) [CoS](#)  
*(mode ToS\_CoS\_Precedence) CoS value.*
- unsigned short [codePoint](#)  
*(mode Differentiated) Differentiated Service code Point range [0-255].*
- unsigned short [ToSCustom](#)  
*(mode Custom) ToS custom value range [0-255].*

### 10.401.1 Detailed Description

Definition at line 23640 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.402 DCM::DeviceControl::SMX36\_Pool\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_Pool\_t:

## Public Attributes

- long [Id](#)  
*RO Pool Id.*
- string [Name](#)  
*Name of pool. MAX string length = 20.*
- unsigned short [UdpPort](#)  
*RO UDP Port used to communicate to the SPS.*
- unsigned long [controllerId](#)  
*RO Statmux controller Id of the board where the pool is running if allocated else 0.*
- unsigned short [VSEParticipants](#)  
*RO The number of VSE running in the pool.*
- unsigned long [Bandwidth](#)  
*(bps) The bandwidth of the pool (bps). Must be greather than BandwidthOverhead.*
- unsigned long [BandwidthOverhead](#)  
*(bps) Overhead/Free-space to the bandwidth used to prevent overshoot on a mux with a small input buffer. must be less that bandwidth*
- unsigned short [STickLength](#)  
*(ms) The S-Tick length of the pool.*
- unsigned short [MaxVSECapacity](#)  
*Maximum number of VSE's expected to be in the pool. range (1-24)*
- unsigned long [Pool\\_Property](#)  
*Read only Bitmap used by GUI to display specific icons.*
- [SMX36\\_PoolSafeRateMode\\_e](#) [SafeRateMode](#)  
*Safe rate mode defines the rate the VSE must fall back on if communication fails to statmux controller.*
- unsigned short [SPSInstance](#)  
*RO (Reserved) The instance number of the SPS where the pool is running if allocated else 0.*
- [SMX36\\_PoolGuaranteeMinRateMode\\_e](#) [GuaranteeMinRateMode](#)  
*Controls whether VSE's releases unused videobandwidth below the min rate to the rest of the pool when the video complexity is low.*

## 10.402.1 Detailed Description

Definition at line 23780 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.403 DCM::DeviceControl::SMX36\_Pool\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_Pool\_V2\_t:

## Public Attributes

- long [Id](#)  
*RO Pool Id.*
- string [Name](#)  
*Name of pool. MAX string length = 20.*
- unsigned short [UdpPort](#)  
*RO UDP Port used to communicate to the SPS.*
- unsigned long [controllerId](#)  
*RO Statmux controller Id of the board where the pool is running if allocated else 0.*
- unsigned short [VSEParticipants](#)  
*RO The number of VSE running in the pool.*
- unsigned long [Bandwidth](#)  
*(bps) The bandwidth of the pool (bps). Must be greather than BandwidthOverhead.*
- unsigned long [BandwidthOverhead](#)  
*(bps) Overhead/Free-space to the bandwidth used to prevent overshoot on a mux with a small input buffer. must be less that bandwidth*
- unsigned short [STickLength](#)  
*(ms) The S-Tick length of the pool.*
- unsigned short [MaxVSECapacity](#)  
*Maximum number of VSE's expected to be in the pool. range (1-24)*
- unsigned long [Pool\\_Property](#)

*Read only Bitmap used by GUI to display specific icons.*

- [SMX36\\_PoolSafeRateMode\\_e SafeRateMode](#)

*Safe rate mode defines the rate the VSE must fall back on if communication fails to statmux controller.*

- unsigned short [SPSInstance](#)

*RO (Reserved) The instance number of the SPS where the pool is running if allocated else 0.*

- boolean [NtpSyncRequired](#)

*RW If True, then if [DCM](#) NTP Sync Alarm is set, put all VSE members to default rate.*

#### 10.403.1 Detailed Description

Definition at line 23800 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.404 DCM::DeviceControl::SMX36\_StatmuxController\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_StatmuxController\_t:

#### Public Attributes

- long [Id](#)

*RO Statmux Controller Id.*

- string [DeviceIPAddress](#)

*RO management IPAddress of the device where the controller is placed.*

- string [SystemName](#)

*RO Systemname hat is the name of the [DCM](#).*

- string [CardName](#)

*RO (CardName) Board of the statmux controller.*

- short [PoolCapacity](#)

*RO The max number of pool the controller can handle.*

- short [ActivePools](#)  
*RO The number of active running pools on the controller.*
- short [SVCCapacity](#)  
*RO The max number of SVC (video channels) the controller can handle.*
- short [ActiveVSEs](#)  
*RO The number of active running VSE on the controller.*
- [SMX36\\_StatmuxControllerBackupState\\_e](#) BackupState  
*Future need to be clarified.*

#### 10.404.1 Detailed Description

Definition at line 23722 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.405 DCM::DeviceControl::SMX36\_VSE\_CalculatedRates\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX36\_VSE\_CalculatedRates\_t:

#### Public Attributes

- long [Id](#)  
*RO Unique ID of the VSE.*

#### 10.419.1 Detailed Description

Service settings within a group.

Definition at line 16282 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.420 DCM::DeviceControl::SMX\_MFP\_Group\_TSs\_t Struct Reference

List of TS on a Statmux group, used for deleting TS from gorup.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX\_MFP\_Group\_TSs\_t:

#### Public Attributes

- unsigned long [GroupID](#)  
*The group reference. The group should already exist.*
- [IPS\\_RefTS\\_List\\_t](#) TSList  
*A sequence of output transport streamS.*

#### 10.420.1 Detailed Description

List of TS on a Statmux group, used for deleting TS from gorup.

Definition at line 16200 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.421 DCM::DeviceControl::SMX\_MFP\_Group\_TSSettings\_t Struct Reference

List of TS settings on Statmux group Can be used to add/get TS to/from a group.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX\_MFP\_Group\_TSSettings\_t:

### Public Attributes

- unsigned long [GroupID](#)  
*The group reference. The group should already exist.*
- [SMX\\_MFP\\_TsSettings\\_List\\_t](#) TSList  
*A sequence of output transport stream settings.*

#### 10.421.1 Detailed Description

List of TS settings on Statmux group Can be used to add/get TS to/from a group.

This can only be done for MultiTS and SingleTS\_AllSvc group types. It is not possible to add/get/delete TS for a SingleTS\_SelectedSvc group.

Definition at line 16191 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.422 DCM::DeviceControl::SMX\_MFP\_GroupSettings\_t Struct Reference

Statmux group settings The Type of the SMXGroup is important concerning further behavior and meanings of the different fields.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX\_MFP\_GroupSettings\_t:

### Public Attributes

- unsigned long [ID](#)  
*ID of the group: read-only, ignored during creation. Only used in Set/Get/Delete commands.*
- string [Name](#)  
*Name: writable, the same name may be used multiple times, it exists only for user ref. not used internally by the DCM. Name length limited to 32 characters.*
- [eSMX\\_MFP\\_GroupType\\_t](#) [Type](#)  
*Type of group: write-once on creation, read only after creation.*
- [IPS\\_RefTS\\_t](#) [Location](#)  
*Location of group (depends on Type: can be TS or Port only): write-once on creation, read only in the other cases. REQUIREMENT: Should be a port for group type MultiTS and be a TS for the other group types.*
- unsigned long [Bitrate](#)  
*The maximum bitrate that should be applied to the statmux group. This should be lower or equal to the output transport stream bandwidth in case of SingleTS\_xxx group types. In bits per second. Range: from 1Mbps to 950Mbps. REQUIREMENT: should be less than the bitrate associated with the location.*

#### 10.422.1 Detailed Description

Statmux group settings The Type of the SMXGroup is important concerning further behavior and meanings of the different fields.

see the [eSMX\\_MFP\\_GroupType\\_t](#) for more details about the type.

Definition at line 16151 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.423 DCM::DeviceControl::SMX\_MFP\_SvcSettings\_t Struct Reference

Statmux setting of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SMX\_MFP\_SvcSettings\_t:

## Public Attributes

- [IPS\\_Service\\_t SvcRef](#)

*Ref of the service.*

- [eSMX\\_MFP\\_SvcState State](#)

*Read-Only: the encoder rate control state.*

- [eSMX\\_MFP\\_SvcMode Mode](#)

*to be statmuxed or used in rate limited mode. Rate Limited mode can only be set on a SPTS service in a MultiTS group. DEFAULT when service is added into a group: RateLimit mode for a MultTS group. Statmux mode for all other group types.*

- unsigned long [MaxBitrate](#)

*maximum allowed bitrate for this service In bits per second. Range: 3Mbps to 30Mbps REQUIREMENT: MaxBitrate has to be larger or equal MinBitrate REMARK: in RateLimit mode, the MaxBitrate indicates the rate limit. DEFAULT when service is added into a group: The Statmux Group bitrate or 12500000, whatever is the smallest.*

- unsigned long [MinBitrate](#)

*minimum allowed bitrate for this service In bits per second. Range: 500Kbps to 8Mbps REQUIREMENT: MinBitrate has to be lower or equal MaxBitrate Ignored in RateLimit mode DEFAULT when service is added into a group: 1000000*

- long [Priority](#)

*relative priority (quality) in the statmux group. Range: from 0 to 6. < DEFAULT when service is added into a group: 3*

- unsigned long [ReservedBitrate](#)  
*reserved for future use: has to be filled in with 0.*

### 10.423.1 Detailed Description

Statmux setting of a service.

These can be retrieved and changed by the `SMX_MFP_SvcSettingsGet` and `SMX_MFP_SvcSettingsChange` calls. They can be retrieved/changed for all video services being statmuxed in a group.

Definition at line 16213 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.424 DCM::DeviceControl::SMX\_MFP\_SvcSettings\_V2\_t Struct Reference

Statmux setting of a service, Version 2.

```
import "DCM.idl";
```

Collaboration diagram for `DCM::DeviceControl::SMX_MFP_SvcSettings_V2_t`:

### Public Attributes

- [IPS\\_Service\\_t SvcRef](#)  
*Ref of the service.*
- [eSMX\\_MFP\\_SvcState State](#)  
*Read-Only: the encoder rate control state.*
- [eSMX\\_MFP\\_SvcMode Mode](#)  
*see `SMX_MFP_SvcSettings_t`*
- [eSMX\\_MFP\\_PassThroughMode PassThroughMode](#)  
*How pass-through services should be handled.*
- unsigned long [MaxBitrate](#)  
*see `SMX_MFP_SvcSettings_t`*
- unsigned long [MinBitrate](#)  
*see `SMX_MFP_SvcSettings_t`*
- long [Priority](#)  
*see `SMX_MFP_SvcSettings_t`*

- unsigned long [ReservedBitrate](#)  
*reserved for future use: has to be filled in with 0.*

#### 10.424.1 Detailed Description

Statmux setting of a service, Version 2.

##### Version

Release 11.10

Added automatic measuring of passthrough services. When upgrading from pre 11.10: measuring is disabled, has to manually enabled (which is keeping the pre 11.10 behaviour). New services will automatically be put in measured pass-through mode. Remark that measuring pass-through services only works for services passing the MFP board.

Definition at line 16252 of file DCM.idl.

#### 10.438 DCM::DeviceControl::SvcOutStreamingSetting\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::SvcOutStreamingSetting\_t:

### Public Attributes

- [IPS\\_Service\\_t RefServ](#)
- boolean [StreamingState](#)

#### 10.438.1 Detailed Description

Definition at line 6069 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.439 DCM::DeviceControl::Table\_Sync\_Info\_t Struct Reference

Structure defining the parameters for time sync via SI table acquisition.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Table\_Sync\_Info\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)  
*input TS where table has to be retrieved from*
- unsigned long [TableId](#)  
*0x70 for TDT of 0x73 for TOT or 0xCD for STT*
- unsigned short [Pid](#)  
*pid value. Typically 0x14 for TDT/TOT and 0x1FFB for STT < If INVALID\_PID\_VALUE (0xFFFF) is specified then typical pid value < will be used automatically*
- short [Offset](#)  
*value in ms that is added to the T\*T time before applying it to the system clock. < Can be a negative value!  
Value in seconds (steps of 1000ms) to correct GPS < time to UTC time. Not supported for the moment and always reset to 0.*

### 10.439.1 Detailed Description

Structure defining the parameters for time sync via SI table acquisition.

Definition at line 732 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.440 DCM::DeviceControl::TableGenerationData\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TableGenerationData\_t:

## Public Attributes

- [TableKeys\\_t OutKeys](#)  
*Keys to locate the output table.*
- unsigned short [OutPid](#)  
*Pid on which the output table should be played out PMT Pid range: 0x0020 .*
- boolean [ForcedOutputPid](#)  
*Indicates if the output pid should be forced or not (=0)*
- [ePIDPassingStatus GenerationMode](#)  
*Specifies what should happen wiht the output table.*
- [IPS\\_RefTS\\_t InRefTs](#)  
*Slot, port and index of the input TS where the table to be be used can be found.*
- [TableKeys\\_t InKeys](#)  
*Keys to locate the desired input table.*
- unsigned short [InPid](#)  
*Pid on which the specified input table should be found.*

## 10.440.1 Detailed Description

Definition at line 6025 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.441 DCM::DeviceControl::TableGenerationData\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TableGenerationData\_V2\_t:

## Public Attributes

- [TableKeys\\_t OutKeys](#)  
*Keys to locate the output table.*
- unsigned short [OutPid](#)  
*Pid on which the output table should be played out PMT Pid range: 0x0020 .*
- boolean [ForcedOutputPid](#)  
*Indicates if the output pid should be forced or not (=0)*
- [ePIDPassingStatus\\_V2 GenerationMode](#)

Definition at line 13223 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.448 DCM::DeviceControl::TC\_AudioSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_AudioSettings\_t:

## Public Attributes

- unsigned long [Bitrate](#)  
8 - 128 kbps for HE-AAC, 8 - 576 kbps < for AAC-LC or 8 - 192 kbps for VBR. In bps.
- boolean [bAllowAC3](#)  
Transcode AC-3 input. Requires an AC3 extension license.
- [enTC\\_EncodingMode\\_t](#) [enAudioEncodingMode](#)  
Remark: This setting is ignored, the audio output is always CBR.
- [enTC\\_TemporalNoiseShaping\\_t](#) [enTemporalNoiseShaping](#)
- [enTC\\_SpectralBandReplication\\_t](#) [enSpectralBandReplication](#)  
Cannot be activated if Perceptual Noise Substitution is enabled.
- [enTC\\_PerceptualNoiseSubstitution\\_t](#) [enPerceptualNoiseSubstitution](#)  
Cannot be activated if Spectral Band Replication is enabled.
- [enTC\\_TransportPacketizationMode\\_t](#) [enTransportPacketizationMode](#)
- short [LevelControl](#)

### 10.448.1 Detailed Description

Definition at line 13129 of file DCM.idl.

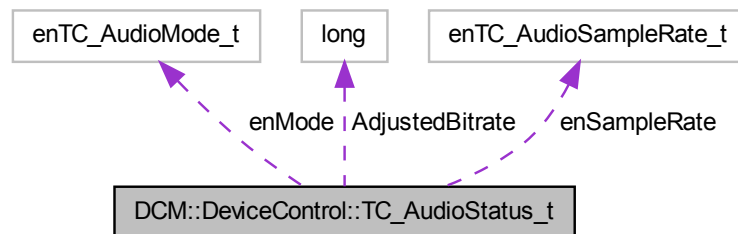

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.449 DCM::DeviceControl::TC\_AudioStatus\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_AudioStatus\_t:

#### Public Attributes

- [enTC\\_AudioSampleRate\\_t](#) `enSampleRate`
- [enTC\\_AudioMode\\_t](#) `enMode`
- unsigned long [AdjustedBitrate](#)

*The real output bitrate, after input mode and sample rate have been taken into account.*

#### 10.449.1 Detailed Description

Definition at line 13142 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.450 DCM::DeviceControl::TC\_Banner\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Banner\_t:

### Public Attributes

- [BannerCfgID\\_t BannerCfgID](#)
- string [BannerText](#)  
*Encoded in ASCII For an empty text (no characters), the banner text will be used as defined in the corresponding banner configuration.*
- unsigned long [BannerTimeout](#)  
*Time (in seconds) the banner may remain on screen. (0 for no timeout) < The banner is removed if the loop count or timeout is reached, whichever is first.*

### 10.450.1 Detailed Description

Definition at line 13985 of file DCM.idl.

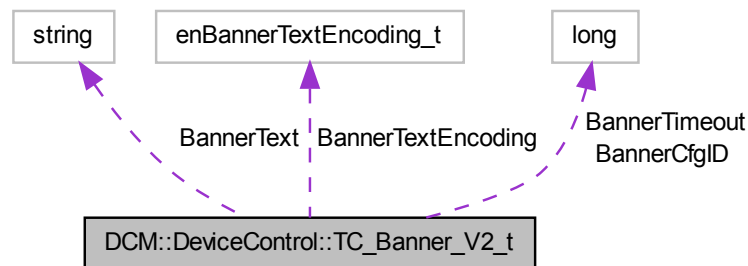

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.451 DCM::DeviceControl::TC\_Banner\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Banner\_V2\_t:

### Public Attributes

- [BannerCfgID\\_t BannerCfgID](#)
- string [BannerText](#)  
*Encoded according to BannerTextEncoding For an empty text (no characters), the banner text will be used as defined in the corresponding banner configuration.*
- unsigned long [BannerTimeout](#)  
*Time (in seconds) the banner may remain on screen. (0 for no timeout) < The banner is removed if the loop count or timeout is reached, whichever is first.*
- [enBannerTextEncoding\\_t BannerTextEncoding](#)  
*Encoding of the BannerText.*

### 10.451.1 Detailed Description

Definition at line 13996 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.452 DCM::DeviceControl::TC\_BannerSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_BannerSettings\_t:

**Public Attributes**

- [IPS\\_RefSvc\\_t RefSvc](#)
- [enTC\\_AllowedBanner\\_t enAllowedBanner](#)
- [enTC\\_BannerPriority\\_t enBannerPriority](#)
- [enTC\\_EAS\\_Control\\_t enEAS\\_Control](#)

*Only affects banners triggered through [StartEAS\(\)](#)*

**10.452.1 Detailed Description**

Definition at line 14038 of file DCM.idl.

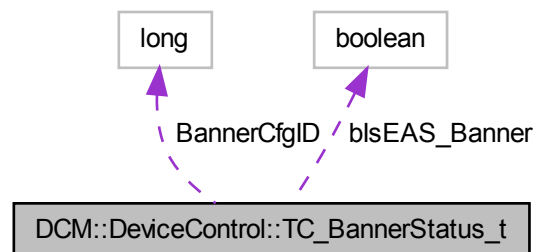

The documentation for this struct was generated from the following file:

#### 10.455.1 Detailed Description

Structure to set/get transcoder board configuration.

#### Version

Release 8.1

Definition at line 12849 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.456 DCM::DeviceControl::TC\_CaptionInfo\_t Struct Reference

Configuration settings for a Closed Caption Service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_CaptionInfo\_t:

### Public Attributes

- string [LanguageCode](#)  
*ISO\_639\_language\_code. Fixed length of 3 bytes !*
- boolean [DigitalCC](#)  
*0 means line21 caption service*
- boolean [Line21\\_Field](#)  
*Only interpreted if DigitalCC == 0. 0 means field 1, else field 2.*
- octet [CaptionSvcNbr](#)  
*value in the range 1 to 63. Only interpreted if DigitalCC == 1*
- boolean [EasyReader](#)  
*1 means tailored for easy reading*
- boolean [WideAspectRatio](#)  
*1 means 16:9 format; 0 means 4:3 format*

### 10.456.1 Detailed Description

Configuration settings for a Closed Caption Service.

Definition at line 10171 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.457 DCM::DeviceControl::TC\_Component\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Component\_t:

#### Public Attributes

- unsigned short [Pid](#)
- [TrackingID\\_t](#) `TrackingId`  
*0 if the component matches no tracking criteria.*

#### 10.457.1 Detailed Description

Definition at line 13230 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

*Output resolution.*
- unsigned long [Bitrate](#)  
*150 - 400kbps, in bps.*
- unsigned long [GOP\\_Length](#)  
*Lenght of the GOP. 1 - 30 frames.*
- unsigned long [CPB\\_Delay](#)  
*Maximum CPB removal delay, in ms. 500 - 1500 ms, and between (service delay - 1306) and (service delay - 452).*
- [enTC\\_ClosedCaptionMode\\_t enClosedCaptionMode](#)  
*Closed caption transcoding mode.*
- unsigned long [PCR\\_Interval](#)  
*10 - 300 ms, in ms.*
- boolean [PCR\\_InPip](#)  
*Should the PCR be part of a PIP packet or should it use an empty packet (on the same PID).*

#### 10.467.1 Detailed Description

Definition at line 13108 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.468 DCM::DeviceControl::TC\_PossibleBoardCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_PossibleBoardCfg\_t:

#### Public Attributes

- boolean [isPossible](#)  
*Is it possible to apply this board configuration.*
- [TC\\_BoardCfg\\_t](#) [BoardCfg](#)

#### 10.468.1 Detailed Description

Definition at line 12838 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.469 DCM::DeviceControl::TC\_PossibleBoardCfg\_V2\_t Struct Reference

Structure to get possible board configurations for a transcoder board.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_PossibleBoardCfg\_V2\_t:

### Public Attributes

- boolean [isPossible](#)  
*Is it possible to apply this board configuration.*
- [TC\\_BoardCfg\\_V2\\_t](#) [BoardCfg](#)

### 10.469.1 Detailed Description

Structure to get possible board configurations for a transcoder board.

### Version

Release 8.1

Definition at line 12860 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.470 DCM::DeviceControl::TC\_Question\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Question\_t:

#### Public Attributes

- `octet ChoicesToMake`
- `SelectionList_t SelectionList`

#### 10.470.1 Detailed Description

Definition at line 12886 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- `DCM.idl`

#### 10.471 DCM::DeviceControl::TC\_ServiceBannerStatus\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_ServiceBannerStatus\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t RefSvc](#)
- [TC\\_BannerStatusList\\_t Banners](#)

*The list of active banners (always zero or one elements)*

### 10.471.1 Detailed Description

Definition at line 14054 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.472 DCM::DeviceControl::TC\_ServiceCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_ServiceCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [enTC\\_MaximumBitrateDescriptorMode\\_t enMaximumBitrateDescriptorMode](#)
- unsigned long [Delay](#)  
*1000 - 2800 ms (Total delay), in ms. See [TC\\_VideoSettings\\_t::CPB\\_Delay](#) for additional restrictions.*
- unsigned long [PCR\\_Interval](#)  
*10 - 300 ms, in ms.*
- boolean [PCR\\_InVideo](#)  
*Should the PCR be part of a video packet or should it use an empty packet (on the same PID).*
- boolean [AdaptSI\\_Tables](#)  
*Default true : will automatically adapt PMT, EIT and SDT tables where necessary.*

#### 10.472.1 Detailed Description

Definition at line 13170 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.473 DCM::DeviceControl::TC\_ServiceComponents\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_ServiceComponents\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TC\\_ComponentList\\_t VideoPids](#)  
*The video pids which can be transcoded.*
- [TC\\_ComponentList\\_t AudioPids](#)  
*The audio pids which can be transcoded.*

### 10.473.1 Detailed Description

Definition at line 13237 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.474 DCM::DeviceControl::TC\_ServiceData\_t Struct Reference

Structure with service data for a transcoder board.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_ServiceData\_t:

## Public Attributes

- [IPS\\_RefSvc\\_t RefSvc](#)  
*Read only : The RefSvc of this service, either main or PIP (PIP not supported in Version 7.01)*
- [IPS\\_RefSvc\\_t ParentRefSvc](#)  
*Read only : The RefSvc of the main service. If RefSvc == ParentRefSvc, this is a main service. For PIP RefSvc <> ParentRefSvc.*
- [ServiceId\\_t SID](#)  
*Read only : The SID of the service.*
- unsigned long [TC\\_Property](#)  
*Read only Bitmap used by GUI to display < Bit 0: Service present at input (true) or not (false). < Bit 4: at least one of the source input PIDs of this service is scrambled < Bit 5: TRUE if service is in backup < Bit 6: TRUE if Service Loss Alarm is active. < Bit 29: TRUE if service can't be deleted (e.g. because it's passed to an output) < Bit 30: TRUE if transcoding is enabled on one of the components of the Service < TRUE if service on a MFP board is processing (transrating/transcoding) audio or video < Bit 31: TRUE if Service contains VBI (future) (same bit as in [IPS\\_Service\\_In\\_t](#))*
- [IPS\\_Service\\_In\\_V2\\_t MainInputService](#)  
*Read only : Reference to the main input service that was used to create the service.*
- [IPS\\_Service\\_In\\_V2\\_t ActiveInputService](#)  
*Read only : can be different from main input service e.g. when service is in backup, ...*
- [DvbString\\_t UserTag](#)  
*Maximum string length 255 characters.*

#### 10.477.1 Detailed Description

Definition at line 14086 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.478 DCM::DeviceControl::TC\_ServiceTrackingID\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_ServiceTrackingID\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TrackingID\\_t TrackingID](#)

#### 10.478.1 Detailed Description

Definition at line 13000 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.479 DCM::DeviceControl::TC\_Svc\_CaptionInfo\_t Struct Reference

Configuration settings for the Caption Service Descriptor(s) of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Svc\_CaptionInfo\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TC\\_ES\\_CaptionInfoList\\_t ES\\_CaptionInfoList](#)

#### 10.479.1 Detailed Description

Configuration settings for the Caption Service Descriptor(s) of a service.

Definition at line 13258 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.480 DCM::DeviceControl::TC\_Video\_t Struct Reference

Video transcode settings together with fields identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_Video\_t:

## Public Attributes

- [TrackingID\\_t TrackingId](#)  
*0 when creating a new entry*
- [TrackingCriterium\\_t TrackingCriterium](#)
- [TC\\_VideoSettings\\_t Settings](#)

### 10.480.1 Detailed Description

Video transcode settings together with fields identifying the video component they're for.

**Deprecated** The types [TC\\_VideoDecode\\_t](#) and [TC\\_VideoEncode\\_t](#) should be used instead of this type.

## Version

Release 7.5

Definition at line 13093 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.481 DCM::DeviceControl::TC\_VideoCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TC\\_VideoList\\_t Video](#)

### 10.481.1 Detailed Description

Definition at line 13195 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.482 DCM::DeviceControl::TC\_VideoDecode\_t Struct Reference

Video decode settings together with fields identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoDecode\_t:

### Public Attributes

- [TrackingID\\_t TrackingId](#)  
*0 when creating a new entry*
- [TrackingCriterium\\_t TrackingCriterium](#)
- boolean [HD\\_Service](#)  
*If set both SD and HD services can be transcoded.*

### 10.482.1 Detailed Description

Video decode settings together with fields identifying the video component they're for.

### Version

Release 8.2

Definition at line 13029 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.483 DCM::DeviceControl::TC\_VideoDecodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoDecodeCfg\_t:

#### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TC\\_VideoDecodeList\\_t VideoDecodeList](#)

#### 10.483.1 Detailed Description

Definition at line 13181 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.484 DCM::DeviceControl::TC\_VideoEncode\_t Struct Reference

Video encode settings together with field identifying the video component they're for.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoEncode\_t:

## Public Attributes

- [TrackingID\\_t TrackingId](#)  
*Must be equal to the tracking ID of a video decode.*
- [TC\\_VideoEncodeSettings\\_t Settings](#)

## 10.484.1 Detailed Description

Video encode settings together with field identifying the video component they're for.

## Version

Release 8.2

Definition at line 13045 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.485 DCM::DeviceControl::TC\_VideoEncodeCfg\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoEncodeCfg\_t:

### Public Attributes

- [IPS\\_RefSvc\\_t Service](#)
- [TC\\_VideoEncodeList\\_t VideoEncodeList](#)

### 10.485.1 Detailed Description

Definition at line 13188 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.486 DCM::DeviceControl::TC\_VideoEncodeSettings\_t Struct Reference

Video encode settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoEncodeSettings\_t:

## Public Attributes

- [enTC\\_Profile\\_t](#) [enProfile](#)  
*Applies if the input is SD. The HD output is always high profile.*

- [enTC\\_EncodingMode\\_t](#) [enEncodingMode](#)
- [enTC\\_ClosedCaptionMode\\_t](#) [enClosedCaptionMode](#)

## 10.490.1 Detailed Description

Video transcode settings.

This is a combination of video decode and encode settings.

**Deprecated** The types [TC\\_VideoEncodeSettings\\_t](#), [TC\\_VideoDecode\\_t](#) and [TC\\_VideoEncode\\_t](#) should be used instead of this type and [TC\\_Video\\_t](#).

**Version**

Release 7.5

Definition at line 13061 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.491 DCM::DeviceControl::TC\_VideoStatus\_t Struct Reference**

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TC\_VideoStatus\_t:

**Public Attributes**

- [enTC\\_ClosedCaptionFormat\\_t](#) `enClosedCaptionFormat`
- [TC\\_VideoResolution\\_t](#) `Resolution`

**10.491.1 Detailed Description**

Definition at line 13080 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.492 DCM::DeviceControl::TempLicenseData Struct Reference**

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TempLicenseData:

#### Public Attributes

- [TempLicenseState\\_t State](#)
- [Time ExpirationDate](#)  
*time of expiration of the temporary licenses in the local timezone*
- boolean [RebootNeeded](#)

#### 10.492.1 Detailed Description

Definition at line 20660 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.493 DCM::DeviceControl::TierAC\_t Struct Reference

Access criteria for tier based scrambling.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TierAC\_t:

#### Public Attributes

- unsigned long [SuperCasId](#)  
*SuperCasId of CA system.*
- [AC\\_t](#) [AC](#)  
*Access criteria.*

#### 10.493.1 Detailed Description

Access criteria for tier based scrambling.

Definition at line 27639 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.494 DCM::DeviceControl::TierData\_t Struct Reference

Tier data.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TierData\_t:

#### Public Attributes

- unsigned long [TierId](#)  
*Tier identification.*
- string [TierName](#)  
*Name for tier.*
- sequence< [TierAC\\_t](#) > [TierACList](#)  
*Access criteria for tier.*

#### 10.494.1 Detailed Description

Tier data.

Definition at line 27646 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.495 DCM::DeviceControl::Time Struct Reference

Structure to supply date and time information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::Time:

### Public Attributes

- long [Year](#)  
*From year 0 onwards.*
- octet [Month](#)  
*From 1 to 12.*
- octet [DayOfMonth](#)  
*From 1 to 28, 29, 30 or 31.*
- octet [Hour](#)  
*From 0 to 23.*
- octet [Minute](#)  
*From 0 to 59.*
- octet [Second](#)  
*From 0 to 59.*

#### 10.495.1 Detailed Description

Structure to supply date and time information.

Definition at line 456 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.496 DCM::DeviceControl::TimeBaseSelectionMode\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TimeBaseSelectionMode\_t:

#### Public Attributes

- [eTimeBaseSelectionMode Mode](#)
- unsigned long [SID](#)  
*Only for eTBS\_ForcedPCR: the ServiceId to be used/that is in use.*
- boolean [FollowDefaultRule](#)  
*Indicates if the TS follows the board level default.*

#### 10.496.1 Detailed Description

**Deprecated** Use V2 structure instead

Definition at line 2945 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.497 DCM::DeviceControl::TimeBaseSelectionMode\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TimeBaseSelectionMode\_V2\_t:

- unsigned long [SID](#)  
*Only for eTBS\_ForcedPCR: the ServiceId to be used/that is in use.*
- boolean [FollowDefaultRule](#)  
*Indicates if the TS follows the board level default.*
- boolean [FastLockMode](#)

#### 10.497.1 Detailed Description

Definition at line 2985 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.498 DCM::DeviceControl::TOT\_Timezone\_t Struct Reference

Structure that represents required data to construct TOT descriptor.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TOT\_Timezone\_t:

#### Public Attributes

- `string m_CountryCode`
- `octet m_CountryRegionId`
- `string m_Timezone`

#### 10.498.1 Detailed Description

Structure that represents required data to construct TOT descriptor.

Definition at line 2761 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.499 DCM::DeviceControl::TR\_AudioLevel\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_AudioLevel\_t:

#### Public Attributes

- unsigned short [Pid](#)  
*The PID value (0..8190)*
- long [Level](#)  
*Audio level change, in db. Between -31 and +31 < Positive values indicate amplification, negative ones attenuation.*

#### 10.499.1 Detailed Description

Definition at line 16856 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.500 DCM::DeviceControl::TR\_BitrateLimits\_t Struct Reference

Min - max bitrate boundaries used for service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_BitrateLimits\_t:

#### Public Attributes

- unsigned long [MinBitrate](#)  
*Minimum bitrate in bps.*
- unsigned long [MaxBitrate](#)  
*Maximum bitrate in bps.*

#### 10.500.1 Detailed Description

Min - max bitrate boundaries used for service.

Definition at line 14970 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.501 DCM::DeviceControl::TR\_BitRateMeasurement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_BitRateMeasurement\_t:

#### Public Attributes

- unsigned long [GroupID](#)
- [BitRateMeasurement\\_t TotalRate](#)
- [BitRateMeasurement\\_t StuffingRate](#)

#### 10.501.1 Detailed Description

Definition at line 9856 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.502 DCM::DeviceControl::TR\_DelayMode\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_DelayMode\_t:

## Public Attributes

- [eTR\\_CoarseDelay CoarseDelay](#)  
*Coarse setting of the delay of the transrater board. Based on this value, the other values of the structure has to be interpreted.*
- [eTR\\_FrameRateDelay FrameRateDelay](#)  
*One of the possible predefined frame rate delay settings.*
- [eTR\\_BoardTypeDelay BoardTypeDelay](#)  
*One of the possible predefined board delay settings of the input stream.*
- [eTR\\_FineDelay FineDelay](#)  
*One of the possible predefined finer delay settings.*
- unsigned long [TotalDelay](#)  
*Customized setting of the total delay of the transrater board.*
- unsigned long [OutputDelay](#)  
*Customized setting of the delay reserved for the output buffer embedded in the transrater board (modifying this setting can result in worst video quality)*

## 10.502.1 Detailed Description

Definition at line 14949 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.503 DCM::DeviceControl::TR\_DelayMode\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_DelayMode\_V2\_t:

## Public Attributes

- [eTR\\_CoarseDelay\\_V2 CoarseDelay](#)  
*Coarse setting of the delay of the transrater board. Based on this value, the other values of the structure has to be interpreted.*
- [eTR\\_FrameRateDelay FrameRateDelay](#)  
*One of the possible predefined frame rate delay settings.*
- [eTR\\_BoardTypeDelay BoardTypeDelay](#)

*One of the possible predefined board delay settings of the input stream.*

- [eTR\\_FineDelay](#) [FineDelay](#)

*One of the possible predefined finer delay settings.*

- unsigned long [TotalDelay](#)

*Customized setting of the total delay of the transrater board.*

- unsigned long [OutputDelay](#)

*Customized setting of the delay reserved for the output buffer embedded in the transrater board (modifying this setting can result in worst video quality)*

- unsigned long [TsDelay](#)

*Customized setting of the TS delay (CoarseDelay = eTR\_TS\_Delay) can be set between 5ms and 100ms.*

### 10.503.1 Detailed Description

Definition at line 14959 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.504 DCM::DeviceControl::TR\_GroupID\_t Struct Reference

Used for referencing transrater staging groups.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_GroupID\_t:

### Public Attributes

- unsigned long [ID](#)

*Group ID in the range [2, 501], group ID 1 may not be used.*

- long [Status](#)

*Status field (for future use).*

## 10.504.1 Detailed Description

Used for referencing transrater staging groups.

Definition at line 14857 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.505 DCM::DeviceControl::TR\_GroupServiceSettings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_GroupServiceSettings\_t:

## Public Attributes

- [TR\\_ServiceSettings\\_List\\_t ServiceSettingsList](#)

## 10.505.1 Detailed Description

Definition at line 15022 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.506 DCM::DeviceControl::TR\_GroupServiceSettings\_V2\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_GroupServiceSettings\_V2\_t:

#### Public Attributes

- [TR\\_GroupID\\_t GroupID](#)
- [TR\\_ServiceSettings\\_V2\\_List\\_t ServiceSettingsList](#)

#### 10.506.1 Detailed Description

Definition at line 15470 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.507 DCM::DeviceControl::TR\_GroupSettings\_t Struct Reference

Used to create and change transrater staging groups.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_GroupSettings\_t:

### Public Attributes

- [TR\\_GroupID\\_t GroupID](#)  
*The group reference, it should be a valid reference. It cannot be changed anymore after creation.*
- string [GroupName](#)  
*The group name, the same name may be used multiple times.*
- [eTR\\_GroupType GroupType](#)  
*The type of group. It cannot be changed anymore after creation.*
- [IPS\\_RefTS\\_t TSRef](#)  
*The output transport stream this group contains (parts of). It should be set to 0xFFFFFFFF in case of a MultiTS group.*
- unsigned long [BitRate](#)  
*The maximum bitrate that should be applied to the statmux group. This should be lower or equal to the output transport stream bandwidth in case of SingleTS\_xxx group types.*

#### 10.507.1 Detailed Description

Used to create and change transrater staging groups.

Definition at line 14976 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.508 DCM::DeviceControl::TR\_ResourceCountingLoads\_t Struct Reference

Calculated loads on TR board available for user.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_ResourceCountingLoads\_t:

**Public Attributes**

- unsigned short [usCurrentLoad](#)  
*in 0.01%*
- unsigned short [usMaxReachedLoad](#)  
*in 0.01%*
- unsigned short [usMaxLoadSimultaneousSplices](#)  
*in 0.01%*

**10.508.1 Detailed Description**

Calculated loads on TR board available for user.

Definition at line 14736 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

**10.509 DCM::DeviceControl::TR\_ResourceCountingSettings\_t Struct Reference**

Settings needed to calculate different loads on TR board which can be modified by user.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_ResourceCountingSettings\_t:

**Public Attributes**

- [enTR\\_VideoFormat](#) [eTR\\_VideoFormat](#)
- unsigned long [ulMaxSD\\_Bitrate](#)  
*in bps*
- unsigned long [ulMaxHD\\_Bitrate](#)  
*in bps*
- unsigned long [ulMaxAudioBitrate](#)

*in bps*

- unsigned short [usMaxNbrOfAudios](#)

### 10.509.1 Detailed Description

Settings needed to calculate different loads on TR board which can be modified by user.

Definition at line 14726 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.510 DCM::DeviceControl::TR\_Service\_t Struct Reference

Identifies an output service in a transrater staging context.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_Service\_t:

## Public Attributes

- [IPS\\_Service\\_t Service](#)  
*The output service reference.*
- unsigned long [PCR\\_Pid](#)  
*The PCR PID in the service.*

## 10.510.1 Detailed Description

Identifies an output service in a transrater staging context.

Definition at line 15003 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.511 DCM::DeviceControl::TR\_ServiceAudioLevel\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_ServiceAudioLevel\_t:

**Public Attributes**

*The transrater mode for the service.*
- octet [Priority](#)  
*The transrater priority.*
- [TR\\_BitratesLimits\\_t](#) Bitrates  
*The bitrates that apply to the service. Only relevant if the service mode is not passthrough.*
- boolean [BitratesOnVideo](#)  
*Read only flag that indicates if the bitrate limits apply on the whole service or only on the video part.*
- long [Status](#)  
*Status field. For future use.*

**10.512.1 Detailed Description**

Transrater specific service settings.

Definition at line 15009 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.513 DCM::DeviceControl::TR\_ServiceSettings\_V2\_t Struct Reference

Transrater specific service settings V2.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_ServiceSettings\_V2\_t:

### Public Attributes

- [TR\\_Service\\_t Service](#)  
*The service reference.*
- [eTR\\_ServiceMode Mode](#)  
*The transrater mode for the service.*
- [octet Priority](#)  
*The transrater priority.*
- [TR\\_BitrateLimits\\_t Bitrates](#)  
*The bitrates that apply to the service. Only relevant if the service mode is not passthrough.*
- [boolean BitratesOnVideo](#)  
*Read only flag that indicates if the bitrate limits apply on the whole service or only on the video part.*
- [long Status](#)  
*Status field. For future use.*
- [eTRB\\_CC\\_UpdateMode eUpdateMode](#)  
*Closed caption update mode.*

### 10.513.1 Detailed Description

Transrater specific service settings V2.

#### Version

Release 8.2

Definition at line 15454 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.514 DCM::DeviceControl::TR\_TSAdd\_t Struct Reference

Used to couple output transport stream(s) to a transrater group.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_TSAdd\_t:

### Public Attributes

- [TR\\_GroupID\\_t GroupID](#)  
*The group reference. The group should already exist.*
- [TR\\_TSSettings\\_List\\_t TSList](#)  
*A sequence of output transport streams.*

#### 10.514.1 Detailed Description

Used to couple output transport stream(s) to a transrater group.

Definition at line 14995 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.515 DCM::DeviceControl::TR\_TsDelay\_t Struct Reference

TS Delay settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_TsDelay\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t TsRef](#)  
*The TS.*
- boolean [DelayTs](#)  
*true = delay the TS / false = don't delay TS*

#### 10.515.1 Detailed Description

TS Delay settings.

Definition at line 16910 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.516 DCM::DeviceControl::TR\_TSSettings\_t Struct Reference

Represents an output transport stream in a transrater staging context.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TR\_TSSettings\_t:

### Public Attributes

- [IPS\\_RefTS\\_t TSRef](#)  
*The output transport stream reference.*
- long [Status](#)  
*Status field (for future use).*

### 10.516.1 Detailed Description

Represents an output transport stream in a transrater staging context.

Definition at line 14987 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.517 DCM::DeviceControl::TrackingCriterium\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TrackingCriterium\_t:

### Public Attributes

- [enuTrackTypeV2](#) enTrackType
- [octet](#) oComponentTag
- [octet](#) oStreamType
- [string](#) strLanguage
- [unsigned long](#) ulDescriptorTag
- [unsigned short](#) usInputPid
- [unsigned short](#) usParentEsOutputPid
- [unsigned short](#) usCasId

#### 10.517.1 Detailed Description

Definition at line 5047 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.518 DCM::DeviceControl::TrapDestination Struct Reference

SNMP trap destination settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TrapDestination:

#### Public Attributes

- string [IPAddress](#)
- string [TrapCommunity](#)

*Max 40 char.*

#### 10.518.1 Detailed Description

SNMP trap destination settings.

Definition at line 1112 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.519 DCM::DeviceControl::TRBitRateSample\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TRBitRateSample\_t:

#### Public Attributes

- [IPS\\_Ref\\_t Ref](#)  
*Identifies the unique location (Board, Port).*
- unsigned long [GroupID](#)
- [BitRateSampleList\\_t Sample](#)

#### 10.519.1 Detailed Description

Definition at line 9846 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.520 DCM::DeviceControl::TS\_AutoPassRules Struct Reference

MPTS pass through settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_AutoPassRules:

### Public Attributes

- [IPS\\_RefTS\\_t InputRef](#)  
*The input TS to monitor/subscribe to.*
- boolean [PassDeleteUnref](#)  
*read-write; true = unreferenced pids auto passed/deleted; false = no auto pass/delete of unreferenced pids*
- boolean [PassKeepEMMs](#)  
*read-write; true = EMMs auto passed ; false = no auto pass of EMMs*
- boolean [PassKeepServices](#)  
*read-write; true = services auto passed ; false = no auto pass of services*

#### 10.520.1 Detailed Description

MPTS pass through settings.

Definition at line 2853 of file DCM.idl.

The documentation for this struct was generated from the following file:

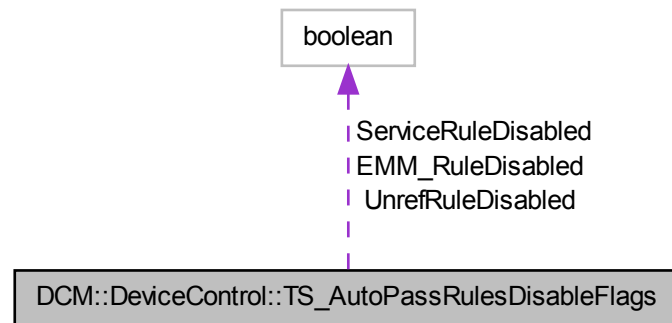

- [DCM.idl](#)

### 10.521 DCM::DeviceControl::TS\_AutoPassRulesDisableFlags Struct Reference

MPTS Passthrough disable flags.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_AutoPassRulesDisableFlags:

### Public Attributes

- boolean [UnrefRuleDisabled](#)  
*read-only; true = the unref PID rule is disabled by system; false = the unref PID rule can be configured by the user;*
- boolean [EMM\\_RuleDisabled](#)  
*read-only; true = the EMM rule is disabled by system; false = the EMM rule can be configured by the user;*
- boolean [ServiceRuleDisabled](#)  
*read-only; true = the service rule is disabled by system; false the service rule can be configured by the user;*

### 10.521.1 Detailed Description

MPTS Passthrough disable flags.

Definition at line 2867 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.522 DCM::DeviceControl::TS\_BackupParams\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_BackupParams\_t:

#### Public Attributes

- [IPS\\_RefTS\\_List\\_t BackupInTS\\_List](#)
- boolean [Revertive](#)
- unsigned long [HighToLowPriorityDelay](#)  
*time in seconds to wait before switching to backup*
- unsigned long [LowToHighPriorityDelay](#)  
*time in seconds to wait before switching back to main input*

#### 10.522.1 Detailed Description

Definition at line 21740 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.523 DCM::DeviceControl::TS\_BitRateMeasurement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_BitRateMeasurement\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)
- [BitRateMeasurement\\_t TotalRate](#)
- [BitRateMeasurement\\_t StuffingRate](#)

### 10.523.1 Detailed Description

Definition at line 9787 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.524 DCM::DeviceControl::TS\_CompBitRateMeasurement\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_CompBitRateMeasurement\_t:

### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)
- unsigned short [PID](#)
- string [strCompType](#)  
*PAT, SDT.*
- [BitRateMeasurement\\_t Rate](#)

#### 10.524.1 Detailed Description

Definition at line 9806 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.525 DCM::DeviceControl::TS\_LossTrigger\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_LossTrigger\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)
- [TriggerBitmap\\_t triggerBitmap](#)

#### 10.525.1 Detailed Description

Definition at line 20910 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.526 DCM::DeviceControl::TS\_PsipMgtInfo\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_PsipMgtInfo\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- [PsipMgtInfoList\\_t PsipMgtInfoList](#)

#### 10.526.1 Detailed Description

Definition at line 9704 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.527 DCM::DeviceControl::TS\_SI\_Table\_Periods\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_SI\_Table\_Periods\_t:

### Public Attributes

- [IPS\\_RefTS\\_t TS](#)
- [SI\\_Table\\_Period\\_List\\_t Periods](#)

#### 10.527.1 Detailed Description

Definition at line 2743 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.528 DCM::DeviceControl::TS\_Tier\_t Struct Reference

Tier based settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_Tier\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTS](#)
- unsigned long [TierId](#)

#### 10.528.1 Detailed Description

Tier based settings.

Definition at line 27654 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.529 DCM::DeviceControl::TS\_TOT\_Timezone\_t Struct Reference

Structure that represents required data to construct all TOT descriptors on a specific TS.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TS\_TOT\_Timezone\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t TS](#)
- [TOT\\_Timezone\\_List\\_t Timezones](#)

#### 10.529.1 Detailed Description

Structure that represents required data to construct all TOT descriptors on a specific TS.

Definition at line 2771 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.530 DCM::DeviceControl::TsOutSvcSourceSelection\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TsOutSvcSourceSelection\_t:

#### Public Attributes

- [IPS\\_RefTS\\_t RefTs](#)
- [ServiceSourcePriority\\_t SrcToActivate](#)

#### 10.530.1 Detailed Description

Definition at line 23295 of file DCM.idl.

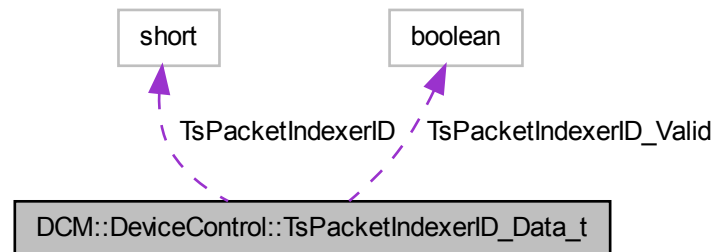

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.531 DCM::DeviceControl::TsPacketIndexerID\_Data\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::TsPacketIndexerID\_Data\_t:

#### Public Attributes

- boolean [TsPacketIndexerID\\_Valid](#)
- unsigned short [TsPacketIndexerID](#)

#### 10.531.1 Detailed Description

Definition at line 29391 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

#### 10.532 DCM::DeviceControl::UniqueDeviceId\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::UniqueDeviceId\_t:

#### Public Attributes

- `string` [Id](#)  
*The ID of the info field.*
- `string` [Info](#)  
*Unique device identifier info field.*

#### 10.532.1 Detailed Description

Definition at line 1293 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.533 DCM::DeviceControl::VCT\_Data\_t Struct Reference

Structure that contains settings about the Virtual Channel Table of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VCT\_Data\_t:

## Public Attributes

- [eTriBool VCT\\_Present](#)  
Follow Input, Generate (Present), Block (Not Present) < status: true = VCT fragment is present at input (either CVCT or TVCT)
- [DvbString\\_t ShortName](#)  
setting: actually the service user name < status: the short name as taken from input
- [MultipleString\\_t LongName](#)  
more describing channel name optionally passed as descriptor. Empty string
- unsigned short [MajorChannelNumber](#)  
first part of channel number (10 bits)
- unsigned short [MinorChannelNumber](#)  
second part of channel number (10 bits)
- [eVctModulation ModulationMode](#)  
see eVctModulation, defaults: if modulation is not according to table
- [eVctEtmLocation ETM\\_Location](#)  
see VCT\_ETMLOCATION\_xxx
- [eTriBool AccessControlled](#)  
true: channel is scrambled
- [eTriBool Hidden](#)  
true: channel is inactive, should not be listed
- [eTriBool PathSelect](#)  
(CVCT only) false: path 1, true: path 2
- [eTriBool OutOfBand](#)

(CVCT only) true: out of band physical transmission

- [eTriBool HideGuide](#)

(only valid when hidden flag is true) true: program may not be listed in program guide

- [eVctServiceType ServiceType](#)

see VCT\_SERVICETYPE\_xxx

- unsigned short [SourceId](#)

internal reference, used for ETT-V and EIT's

### 10.533.1 Detailed Description

Structure that contains settings about the Virtual Channel Table of a service.

Definition at line 9048 of file DCM.idl.

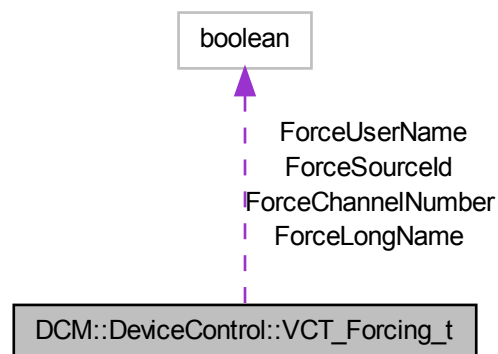

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.534 DCM::DeviceControl::VCT\_Forcing\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VCT\_Forcing\_t:

### Public Attributes

- boolean [ForceUserName](#)

true = use service user name as short name, false = use input short name

- boolean [ForceLongName](#)

true = use filled in long name, false = use input long name

- boolean [ForceChannelNumber](#)

*true = use filled in channel number, false = use input channel number*

- boolean **ForceSourceId**

*true = use filled in source id, false = use input source id*

### 10.534.1 Detailed Description

Definition at line 9097 of file DCM.idl.

The documentation for this struct was generated from the following file:

- DCM.idl

### 10.535 DCM::DeviceControl::VCT\_SvcData\_t Struct Reference

Structure that contains status about the Virtual Channel Table of a service.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VCT\_SvcData\_t:

## Public Attributes

- VCT\_SvcSetting\_t Setting
- VCT\_Data\_t Input

### 10.535.1 Detailed Description

Structure that contains status about the Virtual Channel Table of a service.

Introduced to bundle the settings and status when getting VCT information.

Definition at line 9120 of file DCM.idl.

The documentation for this struct was generated from the following file:

- DCM.idl

## 10.536 DCM::DeviceControl::VCT\_SvcInput\_t Struct Reference

Structure that contains status about the Virtual Channel Table of a service on input.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VCT\_SvcInput\_t:

## Public Attributes

- [IPS\\_Service\\_t RefServ](#)
- [VCT\\_Data\\_t Data](#)

### 10.536.1 Detailed Description

Structure that contains status about the Virtual Channel Table of a service on input.

Definition at line 9069 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.537 DCM::DeviceControl::VCT\_SvcSetting\_t Struct Reference

Structure combining service-id with settings.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VCT\_SvcSetting\_t:

## Public Attributes

- [IPS\\_Service\\_t RefServ](#)

- [VCT\\_Data\\_t Setting](#)
- [VCT\\_Forcing\\_t Forcing](#)

#### 10.537.1 Detailed Description

Structure combining service-id with settings.

Definition at line 9107 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.538 DCM::DeviceControl::VersionInfo Struct Reference

Version info.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VersionInfo:

#### Public Attributes

- string [ComponentName](#)  
*MAX string length = 20.*
- string [VersionName](#)  
*MAX string length = 20.*
- [VersionParts](#) [VersParts](#)

### 10.538.1 Detailed Description

Version info.

Definition at line 1270 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

### 10.539 DCM::DeviceControl::VersionParts Struct Reference

Version number information.

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VersionParts:

### Public Attributes

- char [VersionType](#)  
*'A' for a, 'B' for b, D for demo and V for release*
- short [MajorNumber](#)
- short [MinorNumber](#)
- short [BuildNumber](#)

### 10.539.1 Detailed Description

Version number information.

Definition at line 1261 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.540 DCM::DeviceControl::VideoSignalInfo\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VideoSignalInfo\_t:

## Public Attributes

- [IPS\\_RefTS\\_t RefIn](#)
- [eFrameRate\\_t FrameRate](#)
- unsigned long [SignalRate](#)
- unsigned long [VideoBitrate](#)
- unsigned short [NbrOfAudios](#)
- boolean [bJPEG2000](#)
- [eVideoFormat\\_t VideoFormat](#)
- [eAspectRatio\\_t AspectRatio](#)
- unsigned long [NbrOfLinesPerFrame](#)
- [eFrameBuildUp\\_t FrameBuildUp](#)

## 10.540.1 Detailed Description

Definition at line 30197 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.541 DCM::DeviceControl::VLAN\_Settings\_t Struct Reference

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VLAN\_Settings\_t:

#### Public Attributes

- [eVLAN VLANOnOff](#)
- unsigned short [VLANID](#)  
*range: 0-4094 12 bit, 0xFFFF not allowed, 0=no vlan id, only priority (ieee 802.1Q))*
- unsigned short [Priority](#)  
*range: 0-7 0=default 1=low 7=high (ieee 802.1D)*

#### 10.541.1 Detailed Description

Definition at line 18000 of file `DCM.idl`.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 10.542 DCM::DeviceControl::VlanPortSet\_t Struct Reference

structure to Create/Get information on Vlan PortSets

```
import "DCM.idl";
```

Collaboration diagram for DCM::DeviceControl::VlanPortSet\_t:

### Public Attributes

- [IPS\\_Ref\\_t RefPhysPortSet](#)  
*Underlying Physical (GbE) Port Set.*
- [IPS\\_Ref\\_t RefVlanPortSet](#)  
*Handle to identify a VlanPortSet.*
- unsigned short [VLANID](#)  
*valid range: 1-4094*
- [IpCfgList\\_t ItfAddresses](#)  
*Configured addresses of the vlan interfaces.*
- boolean [bCanBeDeleted](#)  
*true if the configured VLAN can be deleted.*

### 10.542.1 Detailed Description

structure to Create/Get information on Vlan PortSets

Definition at line 6674 of file DCM.idl.

The documentation for this struct was generated from the following file:

- [DCM.idl](#)

## 11 File Documentation

### 11.1 DCM.idl File Reference

This file holds the general interface definition of the DCM module.

#include "DCM\_Types.idl" Include dependency graph for DCM.idl:

## Classes

- interface [DCM::DeviceControl](#)  
*The only interface of DCM to the outside world.*
- struct [DCM::DeviceControl::IPS\\_Ref\\_t](#)  
*General location of a physical or virtual port.*
- struct [DCM::DeviceControl::IPS\\_RefTS\\_t](#)  
*General location of a TS.*
- struct [DCM::DeviceControl::MM\\_ID\\_t](#)  
*Alarm reference (M&M, 1:1 device backup).*
- struct [DCM::DeviceControl::Time](#)  
*Structure to supply date and time information.*
- struct [DCM::DeviceControl::NTP\\_Stats\\_t](#)
- struct [DCM::DeviceControl::NTP\\_Info\\_t](#)
- struct [DCM::DeviceControl::Table\\_Sync\\_Info\\_t](#)  
*Structure defining the parameters for time sync via SI table acquisition.*
- struct [DCM::DeviceControl::NotifData\\_t](#)
- struct [DCM::DeviceControl::TrapDestination](#)  
*SNMP trap destination settings.*
- struct [DCM::DeviceControl::SNMPCommunity](#)  
*SNMP read or write community settings.*
- struct [DCM::DeviceControl::VersionParts](#)  
*Version number information.*
- struct [DCM::DeviceControl::VersionInfo](#)  
*Version info.*
- struct [DCM::DeviceControl::BoardIdentification](#)  
*Information data as returned by `GetSystemId()`.*
- struct [DCM::DeviceControl::UniqueDeviceId\\_t](#)
- struct [DCM::DeviceControl::ModuleExceptionTrace\\_t](#)  
*Structure to get or set Debug Trace Level information.*
- struct [DCM::DeviceControl::BoardInfo\\_t](#)

- Structure to return board configuration.*

  - struct [DCM::DeviceControl::BoardInfo\\_V2\\_t](#)
- Structure to return board configuration.*

  - struct [DCM::DeviceControl::BoardCfg\\_t](#)
- Structure to get or set port information.*

  - struct [DCM::DeviceControl::BoardCfg\\_V2\\_t](#)
- Structure to get or set port information.*

  - struct [DCM::DeviceControl::ComponentTemperature\\_t](#)
  - struct [DCM::DeviceControl::BoardTemperature\\_t](#)
  - struct [DCM::DeviceControl::IP\\_Subnet\\_t](#)
  - struct [DCM::DeviceControl::NicTeam\\_Settings](#)
- Structure to get or set NIC team configuration.*

  - struct [DCM::DeviceControl::NicTeam\\_MemberStatus\\_t](#)
- Structure describing the status of a NIC team member.*

  - struct [DCM::DeviceControl::NicTeamStatus](#)
- Structure to get NIC team status.*

  - struct [DCM::DeviceControl::IPS\\_UDP\\_Socket\\_t](#)
- The socket describes the IP address & UDP port on which a TS is played out.*

  - struct [DCM::DeviceControl::IPS\\_InputTS\\_t](#)
- Information of an incoming TS.*

  - struct [DCM::DeviceControl::IPS\\_Gbe\\_InputTS\\_t](#)
- Gbe information of an incoming TS.*

  - struct [DCM::DeviceControl::Debug\\_Gbe\\_InputTS\\_t](#)
  - struct [DCM::DeviceControl::IPS\\_ChangeInputTS\\_t](#)
- Information to change an incoming TS.*

  - struct [DCM::DeviceControl::Debug\\_Gbe\\_OutputTS\\_t](#)
- Information-Settings of an outgoing TS.*

  - struct [DCM::DeviceControl::IPS\\_OutputTS\\_t](#)
  - struct [DCM::DeviceControl::IPS\\_OutputTS\\_V2\\_t](#)
- Information-Settings of an outgoing TS.*

  - struct [DCM::DeviceControl::IPS\\_LookupTS\\_t](#)
- Structure to find a specific TS by IP-address and UDP port.*

  - struct [DCM::DeviceControl::IPS\\_ReferenceTS\\_t](#)
- Structure to find a specific TS by IP-address and UDP port.*

  - struct [DCM::DeviceControl::IPS\\_OutPID\\_Data\\_t](#)
- Used for PID passing by [IPS\\_OutPID\\_AddL\(\)](#), [IPS\\_OutPID\\_GetL\(\)](#) and [IPS\\_OutPID\\_DeleteL\(\)](#)*

  - struct [DCM::DeviceControl::IPS\\_OutPID\\_Data2\\_t](#)
  - struct [DCM::DeviceControl::IPS\\_InPID\\_Data\\_t](#)
  - struct [DCM::DeviceControl::IPS\\_InPID\\_Data\\_V2\\_t](#)
  - struct [DCM::DeviceControl::InEMM\\_Ref\\_t](#)
- Identification of which PID to be created/deleted. Note this is duplicated by [RefPid\\_t](#) but must remain for backwards compatability.*

  - struct [DCM::DeviceControl::EMM\\_Data\\_t](#)
- Identification of EMMG EMMs.*

  - struct [DCM::DeviceControl::Ref\\_SI\\_table\\_ext\\_t](#)
  - struct [DCM::DeviceControl::SI\\_Table\\_Period\\_t](#)
  - struct [DCM::DeviceControl::SI\\_Table\\_GenerationMode\\_t](#)

*Generation mode for SI tables.*

- struct [DCM::DeviceControl::TS\\_SI\\_Table\\_Periods\\_t](#)
- struct [DCM::DeviceControl::TableKeys\\_t](#)
- struct [DCM::DeviceControl::TOT\\_Timezone\\_t](#)

*Structure that represents required data to construct TOT descriptor.*

- struct [DCM::DeviceControl::TS\\_TOT\\_Timezone\\_t](#)

*Structure that represents required data to construct all TOT descriptors on a specific TS.*

- struct [DCM::DeviceControl::RoutingStatusRecord\\_t](#)

*Structure that contains information about one error that occurred during routing file upload (pre-config - IPS\_ProcessRoutingFile)*

- struct [DCM::DeviceControl::IPS\\_RefPid\\_t](#)

*Note RefPid\_t is effectively a copy of InEMM\_Ref\_t but that must remain for compatability.*

- struct [DCM::DeviceControl::CompPidES\\_t](#)

*Identification of muxed pids.*

- struct [DCM::DeviceControl::CompPidES\\_V2\\_t](#)
- struct [DCM::DeviceControl::TS\\_AutoPassRules](#)

*MPTS pass through settings.*

- struct [DCM::DeviceControl::TS\\_AutoPassRulesDisableFlags](#)

*MPTS Passthrough disable flags.*

- struct [DCM::DeviceControl::DefaultAutoPassRules](#)

*Default Service component behaviour.*

- struct [DCM::DeviceControl::Service\\_AutoPassRules](#)

*Service component behaviour.*

- struct [DCM::DeviceControl::SI\\_AutoPassRules\\_t](#)
- struct [DCM::DeviceControl::OutTS\\_InsertCATDescriptors\\_t](#)
- struct [DCM::DeviceControl::TimeBaseSelectionMode\\_t](#)
- struct [DCM::DeviceControl::InTS\\_TimeBaseSelectionMode\\_t](#)
- struct [DCM::DeviceControl::BoardDejitterCfg\\_t](#)
- struct [DCM::DeviceControl::TimeBaseSelectionMode\\_V2\\_t](#)
- struct [DCM::DeviceControl::InTS\\_TimeBaseSelectionMode\\_V2\\_t](#)
- struct [DCM::DeviceControl::InTsExistenceReasons\\_t](#)

*Input Transport stream reason for existence bitmap.*

- struct [DCM::DeviceControl::GbeIO\\_IP\\_Settings\\_t](#)
- struct [DCM::DeviceControl::ForbiddenPidRange\\_t](#)
- struct [DCM::DeviceControl::OutTS\\_NitInPat\\_t](#)

*NIT in PAT setting for specific TS.*

- struct [DCM::DeviceControl::PriorityBitMode\\_t](#)

*Compact CA descriptor setting (per input TS)*

- struct [DCM::DeviceControl::InTS\\_PriorityBit\\_t](#)

*Information to change the priority bit of the MPEG packets of an incoming TS.*

- struct [DCM::DeviceControl::IPS\\_OutputTS\\_LT\\_t](#)
- struct [DCM::DeviceControl::IPS\\_OutputTS\\_LT\\_V2\\_t](#)
- struct [DCM::DeviceControl::PortTsSvcProps\\_t](#)
- struct [DCM::DeviceControl::IPS\\_Service\\_t](#)

*SID reference.*

- struct [DCM::DeviceControl::IPS\\_Service\\_In\\_t](#)

*Incoming service information.*

- struct [DCM::DeviceControl::IPS\\_SDT\\_Data\\_t](#)

*Structure that contains data about the Service Description Table of a service.*

- struct [DCM::DeviceControl::IPS\\_ServiceData\\_Out\\_t](#)
- struct [DCM::DeviceControl::IPS\\_RefSvc\\_t](#)

*A reference to a service.*

- struct [DCM::DeviceControl::IPS\\_Service\\_In\\_V2\\_t](#)

*A definition of an input service as used on the output.*

- struct [DCM::DeviceControl::IPS\\_ServiceData\\_Out\\_V2\\_t](#)

*Extended information about an output service.*

- struct [DCM::DeviceControl::IPS\\_ServiceData\\_Out\\_V3\\_t](#)

*Extended information about an output service.*

- struct [DCM::DeviceControl::ServiceBlockCAInfo\\_t](#)

*Outgoing service information.*

- struct [DCM::DeviceControl::TC\\_ServiceData\\_t](#)

*Structure with service data for a transcoder board.*

- struct [DCM::DeviceControl::TrackingCriterium\\_t](#)
- struct [DCM::DeviceControl::MergeCriterium\\_t](#)
